

# PRELIMINARY TECHNICAL DATA

## Zero-Drift, Single-Supply, Rail-to-Rail Input/Output Low Noise Operational Amplifier

# a

### Preliminary Technical Data

### AD8628

#### FEATURES

- Lowest auto-zero amplifier noise
- Low Offset Voltage: 5  $\mu\text{V}$
- Input Offset Drift: 0.03  $\mu\text{V}/^\circ\text{C}$
- Rail-to-Rail Input and Output Swing
- 5 V Single-Supply Operation
- High Gain, CMRR, and PSRR: 120 dB
- Very Low Input Bias Current: 100 pA
- Low Supply Current: 1.3 mA
- Overload Recovery Time: 0.2 ms
- No External Components Required

#### APPLICATIONS

- Automotive Sensors
- Pressure and Position Sensors
- Strain Gage Amplifiers
- Medical Instrumentation
- Thermocouple Amplifiers

#### GENERAL DESCRIPTION

This new family of amplifiers has ultra-low offset, drift and bias current. The AD8628 is a wide bandwidth auto-zero amplifier featuring rail-to-rail input and output swings and low noise. Operation is fully specified from 2.7 to 5 volts single supply ( $\pm 1.35\text{V}$  to  $\pm 2.5\text{V}$  dual supply).

The AD8628 family provides the benefits previously found only in expensive auto-zeroing or chopper-stabilized amplifiers. Using Analog Devices' new topology these zero-drift amplifiers combine low cost, with high accuracy and low noise. (No external capacitors are required.) In addition, the AD8628 greatly reduces the digital switching noise found in most chopper stabilized amplifiers.

With an offset voltage of only 1  $\mu\text{V}$ , drift less than 0.005  $\mu\text{V}/^\circ\text{C}$  and noise of only 0.5  $\mu\text{V}$  P-P (0Hz to 10 Hz) the AD8628 is perfectly suited for applications where error sources cannot be tolerated. Position and pressure sensors, medical equipment, and strain gage amplifiers benefit greatly from nearly zero drift over their operating temperature range. Many systems may take advantage of the rail-to-rail input and output swings provided by

the AD8628 family to reduce input biasing complexity and maximize SNR.

The AD8628 family is specified for the extended industrial ( $-40^\circ$  to  $+125^\circ\text{C}$ ) temperature range. The AD8628 amplifier is available in the tiny SOT23 and the popular 8-pin narrow SOIC plastic packages.

## AD8628

### ABSOLUTE MAXIMUM RATINGS

Supply Voltage .....	+6V
Input Voltage.....	GND to $V_s + 0.3V$
Differential Input Voltage <sup>1</sup> .....	$\pm 5.0V$
Output Short-Circuit Duration to Gnd.....	Indefinite
Storage Temperature Range	
RT, R Package .....	-65°C to +150°C
Operating Temperature Range	
AD8628 .....	-40°C to +125°C
Junction Temperature Range	
RT, R Package .....	-65°C to +150°C
Lead Temperature Range (Soldering, 10 sec).....	+300°C

Package Type	$\theta_{JA}$ <sup>2</sup>	$\theta_{JC}$	Units
5-Pin SOT23 (RT)			°C/W
8-Pin SOIC (R)	158	43	°C/W

### NOTES

- <sup>1</sup> Differential input voltage is limited to  $\pm 5.0$  volts or the supply voltage, whichever is less.
- <sup>2</sup>  $\theta_{JA}$  is specified for the worst case conditions, i.e.,  $\theta_{JA}$  is specified for device in socket for P-DIP packages;  $\theta_{JA}$  is specified for device soldered in circuit board for SOIC and TSSOP packages.

### ORDERING GUIDE

Model	Temperature Range	Package Description	Package Option
AD8628ART	-40°C to +125°C	5-Pin SOT23	RT-5
AD8628AR	-40°C to +125°C	8-Pin SOIC	SO-8
