## LCD drivers

## PCF21xxC family

**1 FEATURES**

- Supply voltage 2.25 to 6.0 V
- Low current consumption
- Serial data input
- CBUS control
- One-point built-in oscillator
- Stand-alone or expanded system
- Power-on reset clear
- LCD segments
  - 40 (PCF2100C)
  - 64 (PCF2111C)
  - 32 (PCF2112C)
- Multiplex rate
  - 1 : 2 (PCF2100C)
  - 1 : 2 (PCF2111C)
  - 1 : 1 (PCF2112C)
- Word length
  - 22 bits (PCF2100C)
  - 34 bits (PCF2111C)
  - 34 bits (PCF2112C).

**2 GENERAL DESCRIPTION**

The PCF21xxC family are single-chip, silicon gate CMOS LCD driver circuits. A 3-line bus (CBUS) structure enables serial data transfer with microcontrollers. All inputs are CMOS/NMOS compatible.

The devices have the same function and performance as those of the PCF21xx family, which they supersede. The maximum operating voltage required is reduced from 6.5 to 6.0 V.

**3 QUICK REFERENCE DATA**

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
$V_{DD}$	supply voltage		2.25	–	6.0	V
$I_{DD1}$	supply current 1	outputs open; CBUS inactive	–	20	50	$\mu$ A
$I_{DD2}$	supply current 2	outputs open; CBUS inactive; $T_{amb} = 25\text{ }^{\circ}\text{C}$	–	20	30	$\mu$ A
$P_O$	power dissipation per output		–	–	100	mW
$T_{amb}$	operating ambient temperature		–40	–	+85	$^{\circ}\text{C}$
$T_{stg}$	storage temperature		–65	–	+150	$^{\circ}\text{C}$

**4 ORDERING INFORMATION**

TYPE NUMBER	PACKAGE		
	NAME	DESCRIPTION	VERSION
PCF2100CP	DIP28	plastic dual in-line package; 28 leads (600 mil)	SOT117-1
PCF2100CT	SO28	plastic small outline package; 28 leads; body width 7.5 mm	SOT136-1

# LCD drivers

# PCF21xxC family

## 7 FUNCTIONAL DESCRIPTION

An LCD segment or LED output is activated when the corresponding DATA bit is HIGH.

### 7.1 PCF2100C

When DATA bit 21 is HIGH, the A-latches (BP1) are loaded. With DATA bit 21 LOW, the B-latches (BP2) are loaded. CLB pulse 23 transfers data from the shift register to the selected latches.

### 7.2 PCF2111C

When DATA bit 33 is HIGH, the A-latches (BP1) are loaded. With DATA bit 33 LOW, the B-latches (BP2) are loaded. CLB pulse 35 transfers data from the shift register to the selected latches.

### 7.3 PCF2112C

When DATA bit 33 is HIGH, the latches are loaded. CLB pulse 35 transfers data from the shift register to the selected latches.

### 7.4 Bus control logic

The following tests are carried out by the bus control logic:

1. Test on leading zero
2. Test on number of DATA bits
3. Test of disturbed DLEN and DATA signals during transmission.

If one of the test conditions is not fulfilled, no action follows the load condition (load pulse with DLEN LOW) and the driver is ready to receive new data.

**8 LIMITING VALUES**

In accordance with the Absolute Maximum Rating System (IEC 134).

SYMBOL	PARAMETER	CONDITIONS	MIN.	MAX.	UNIT
$V_{DD}$	supply voltage		-0.5	+8.0	V
$V_I$	input voltage DLEN, CLB, DATA and OSC		$V_{SS} - 0.5$	$V_{DD} + 0.5$	V
$V_O$	output voltage BP1, BP2 and S1 to S32		$V_{SS} - 0.5$	$V_{DD} + 0.5$	V
$I_{DD}, I_{SS}$	supply current		-50	+50	mA
$I_I$	DC input current		-20	+20	mA
$I_O$	DC output current		-25	+25	mA
$P_{tot}$	total power dissipation per package	note 1	-	500	mW
$P_O$	power dissipation per output		-	100	mW
$T_{stg}$	storage temperature		-65	+150	°C

**Note**

- Derate by 7.7 mW/K when  $T_{amb} > 60$  °C.

**9 HANDLING**

Inputs and outputs are protected against electrostatic discharge in normal handling. However, to be totally safe, it is desirable to take normal precautions appropriate to handling MOS devices. See *"Handling MOS devices"*.

ESD in accordance with *"MIL STD 883C, Method 3015"*.

## LCD drivers

## PCF21xxC family

**10 DC CHARACTERISTICS**

$V_{DD} = 2.25$  to  $6.0$  V;  $V_{SS} = 0$  V;  $T_{amb} = -40$  to  $+80$  °C;  $R_O = 1$  M $\Omega$ ;  $C_O = 680$  pF; unless otherwise specified.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
<b>Supply</b>						
$V_{DD}$	supply voltage		2.25	–	6.0	V
$I_{DD}$	supply current	note 1; see Fig.13	–	20	50	$\mu$ A
		note 1; $T_{amb} = 25$ °C; see Fig.13	–	20	30	$\mu$ A
$V_{POR}$	power-on reset voltage level	note 2	–	1.0	1.6	V
<b>Inputs CLB, DATA and DLEN</b>						
$V_{IL}$	LOW level input voltage		–	–	0.8	V
$V_{IH}$	HIGH level input voltage		2.0	–	–	V
$I_{LI}$	input leakage current	$V_I = V_{SS}$ or $V_{DD}$	–	–	$\pm 1$	$\mu$ A
$C_i$	input capacitance	note 3	–	–	10	pF
<b>Input OSC</b>						
$I_{osc}$	oscillator start-up current	$V_I = V_{SS}$	0.5	1.2	5.0	$\mu$ A
<b>LCD outputs</b>						
$V_{BP}$	DC voltage of backplane drivers		–	$\pm 20$	–	mV
$Z_{O(BP)}$	backplane driver output impedance	note 4; $V_{DD} = 5$ V	–	0.5	5.0	k $\Omega$
$Z_{O(S)}$	segment driver output impedance	note 4; $V_{DD} = 5$ V	–	1	7	k $\Omega$

**Notes**

1. Outputs open; CBUS inactive.
2. Resets all logic, when  $V_{DD} < V_{POR}$ .
3. Periodically sampled (not 100% tested).
4. Outputs measured one at a time.

## LCD drivers

## PCF21xxC family

**11 AC CHARACTERISTICS**

$V_{DD} = 2.25$  to  $6.0$  V;  $V_{SS} = 0$  V;  $T_{amb} = -40$  to  $+80$  °C;  $R_O = 1$  M $\Omega$ ;  $C_O = 680$  pF; all timing values are referenced to  $V_{IH}$  and  $V_{IL}$  levels with an input voltage swing of  $V_{SS}$  to  $V_{DD}$ ; unless otherwise specified.

SYMBOL	PARAMETER	CONDITIONS	MIN.	TYP.	MAX.	UNIT
<b>Inputs CLB, DATA and DLEN (see Fig.12)</b>						
$t_{SUDA}$	data set-up time		3	–	–	$\mu$ s

## LCD drivers

## PCF21xxC family

**13 SOLDERING****13.1 Introduction**

There is no soldering method that is ideal for all IC packages. Wave soldering is often preferred when through-hole and surface mounted components are mixed on one printed-circuit board. However, wave soldering is not always suitable for surface mounted ICs, or for printed-circuits with high population densities. In these situations reflow soldering is often used.

This text gives a very brief insight to a complex technology. A more in-depth account of soldering ICs can be found in our "IC Package Databook" (order code 9398 652 90011).

**13.2 DIP****13.2.1 SOLDERING BY DIPPING OR BY WAVE**

The maximum permissible temperature of the solder is 260 °C; solder at this temperature must not be in contact with the joint for more than 5 seconds. The total contact time of successive solder waves must not exceed 5 seconds.

The device may be mounted up to the seating plane, but the temperature of the plastic body must not exceed the specified maximum storage temperature ( $T_{stg\ max}$ ). If the printed-circuit board has been pre-heated, forced cooling may be necessary immediately after soldering to keep the temperature within the permissible limit.

**13.2.2 REPAIRING SOLDERED JOINTS**

Apply a low voltage soldering iron (less than 24 V) to the lead(s) of the package, below the seating plane or not more than 2 mm above it. If the temperature of the soldering iron bit is less than 300 °C it may remain in contact for up to 10 seconds. If the bit temperature is between 300 and 400 °C, contact may be up to 5 seconds.

**13.3 SO and VSO****13.3.1 REFLOW SOLDERING**

Reflow soldering techniques are suitable for all SO and VSO packages.

Reflow soldering requires solder paste (a suspension of fine solder particles, flux and binding agent) to be applied to the printed-circuit board by screen printing, stencilling or pressure-syringe dispensing before package placement.

Several techniques exist for reflowing; for example, thermal conduction by heated belt. Dwell times vary between 50 and 300 seconds depending on heating method. Typical reflow temperatures range from 215 to 250 °C.

Preheating is necessary to dry the paste and evaporate the binding agent. Preheating duration: 45 minutes at 45 °C.

**13.3.2 WAVE SOLDERING**

Wave soldering techniques can be used for all SO and VSO packages if the following conditions are observed:

- A double-wave (a turbulent wave with high upward pressure followed by a smooth laminar wave) soldering technique should be used.
- The longitudinal axis of the package footprint must be parallel to the solder flow.
- The package footprint must incorporate solder thieves at the downstream end.

During placement and before soldering, the package must be fixed with a droplet of adhesive. The adhesive can be applied by screen printing, pin transfer or syringe dispensing. The package can be soldered after the adhesive is cured.

Maximum permissible solder temperature is 260 °C, and maximum duration of package immersion in solder is 10 seconds, if cooled to less than 150 °C within 6 seconds. Typical dwell time is 4 seconds at 250 °C.

A mildly-activated flux will eliminate the need for removal of corrosive residues in most applications.

**13.3.3 REPAIRING SOLDERED JOINTS**

Fix the component by first soldering two diagonally-opposite end leads. Use only a low voltage soldering iron (less than 24 V) applied to the flat part of the lead. Contact time must be limited to 10 seconds at up to 300 °C. When using a dedicated tool, all other leads can be soldered in one operation within 2 to 5 seconds between 270 and 320 °C.

**14 DEFINITIONS**

<b>Data sheet status</b>	
Objective specification	This data sheet contains target or goal specifications for product development.
Preliminary specification	This data sheet contains preliminary data; supplementary data may be published later.
Product specification	This data sheet contains final product specifications.
Short-form specification	The data in this specification is extracted from a full data sheet with the same type number and title. For detailed information see the relevant data sheet or data handbook.
<b>Limiting values</b>	
Limiting values given are in accordance with the Absolute Maximum Rating System (IEC 134). Stress above one or more of the limiting values may cause permanent damage to the device. These are stress ratings only and operation of the device at these or at any other conditions above those given in the Characteristics sections of the specification is not implied. Exposure to limiting values for extended periods may affect device reliability.	
<b>Application information</b>	
Where application information is given, it is advisory and does not form part of the specification.	

**15 LIFE SUPPORT APPLICATIONS**

These products are not designed for use in life support appliances, devices, or systems where malfunction of these products can reasonably be expected to result in personal injury. Philips customers using or selling these products for use in such applications do so at their own risk and agree to fully indemnify Philips for any damages resulting from such improper use or sale.
