

MITSUBISHI <LINEAR ICs>  
**M51204TL, FP**

**VOLTAGE COMPARATOR**

**DESCRIPTION**

The M51204 is a semiconductor integrated circuit for a voltage comparator that operates from a single power supply. Especially the M51204 has superiority as to characteristics of input current (high input resistance) and fits to wide ranged applications, for example CR timer, etc. M51204TL, FP's package is a mini SIP and FLAT package, therefore can use very easily.

**FEATURES**

- Low input current ..... 20nA(typ.)
- Wide operating voltage range ..... 2.5~28V
- Low power dissipation ..... 2.5mA(max.)
- Capable of directly driving a relay or a lamp
- High output breakdown voltage ..... 30V(max.)

**APPLICATION**

Voltage comparator, electric shutter, CR timer, time delay circuit, oscillator (square wave)

**RECOMMENDED OPERATING CONDITIONS**

- Supply voltage range ..... 2.5~28V
- Rated supply voltage ..... 12V

**PRECAUTIONS FOR USE**

1. Paying much attention is necessary for fear that the M51204TL,FP may flow large current and reach to destroy because of the structure when the terminals of  $V_{CC}$  and GND of the M51204TL,FP is connected wrong position each other.
2. Output is "open collector" and a loading resistor is not included. Connect a loading resistor to stabilize operation, in case of driving a next stage.
