DESCRIPTION

The 54HC365 is an advanced high-speed CMOS HEX BUS BUFFER (3-STATE) fabricated with silicon gate C^2MOS technology.

All six buffers are controlled by the combination of two enable inputs ($\overline{G1}$ and $\overline{G2}$); all outputs of these buffers are enabled only when both $\overline{G1}$ and $\overline{G2}$ inputs are held low, under all other conditions these outputs are disabled in a high-impedance state.
The M54HC365 has non inverting outputs.
All inputs are equipped with protection circuits against static discharge and transient excess voltage.

Average operating current can be obtained by the following equation. $I_{CC(opr)} = C_{PD} \times V_{CC} \times f_{IN} + I_{CC}/6$ (per gate)
