

TOSHIBA Bipolar Linear Integrated Circuit Silicon Monolithic

# TA1360AFG

YCbCr/YPbPr Signal and Sync Processor for Digital TV, Progressive Scan TV and Double Scan TV

The TA1360AFG integrates an analog component signal (YCbCr/YPbPr) processor and sync processor in a 80-pin QFP plastic package. The IC is ideal for digital TVs, progressive TVs, and double scan TVs.

The luminance block and the color difference block incorporate the high performance signal processing circuits. The sync processor block supports 525I/60, 625I/50, 525P/60, 625P/50, 1125I/50, 1125I/60, 750P/60, (750P/50), PAL100 Hz, NTSC120 Hz, and SVGA/60(VESA).

The TA1360AFG incorporates the I<sup>2</sup>C bus. The device can control various functions via the bus line.

Weight: 1.6 g (typ.)

## Features

### Luminance Block

- Black stretch circuit and DC restoration rate correction circuit
- Dynamic  $\gamma$  correction circuit (gray scale correction)
- SRT (LTI)
- Y group delay correction (shoot balance correction)
- High-bright color circuit
- Color detail enhancer (CDE)
- White pulse limiter (WPL)
- VSM output

### Color difference Block

- Fresh color correction
- Dynamic Y/C correction circuit
- Color SRT (CTI)
- Color  $\gamma$  circuit
- Green stretch
- Blue stretch

### Text Block

- OSD blending SW
- ACB (only black level)
- Two analog RGB inputs

### Synchronization Block

- Horizontal sync (15.75 k, 28.125 k, 31.5 k, 33.75 k, 37.9 k, 45 kHz)
- Vertical sync (525I/P, 625I/P, 750P, 1125I/P, PAL 100 Hz/NTSC 120 Hz)
- 2- and 3-level sync separator circuit
- HD/VD input (positive and negative polarities)
- Copy guard
- Vertical blanking

Block Diagram

## Pin Assignment

Pin Functions

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
12 13 14	R OUT G OUT B OUT	Outputs R/G/B signal. Recommended output amplitude: 100 IRE = 2.3 Vp-p		100 IRE: 2.3 Vp-p Conditions: UNI-COLOR = max SUB-CONT = Cent Y IN = 0.7 Vp-p
15	NC	This pin is not used. Connect to GND.	—	—
16	RGB VCC	VCC pin for text/RGB block. See "Maximum Ratings" about the supply voltage.	—	—
17	NC	This pin is not used. Connect to GND.	—	—
18 19 21	ANALOG OSD R IN ANALOG OSD G IN ANALOG OSD B IN	Inputs analog OSD signal via clamp capacitor.		100 IRE: 0.7 Vp-p (not including sync)
20 22	NC	This pin is not used. Connect to GND.	—	—
23	DAC2 (ACB pulse)	Outputs 1-bit DAC or pulse over ACB period. Open-collector output.		DC or ACB PULSE 
24 25 26	ANALOG R IN ANALOG G IN ANALOG B IN	Inputs analog R/G/B signal via clamp capacitor.		100 IRE: 0.7 Vp-p (not including sync)
27	I <sup>2</sup> L GND	GND pin for I <sup>2</sup> L block	—	—

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
28	SDA	SDA pin for I <sup>2</sup> C BUS		—
29	NC	This pin is not used. Connect to GND.	—	—
30	SCL	SCL pin for I <sup>2</sup> C BUS		—
31	I <sup>2</sup> L V <sub>DD</sub>	V <sub>DD</sub> pin for I <sup>2</sup> L block. Connects 2 V (typ.). Supply power via zener diode through resistor from pin 45. (See "Application Circuit")	—	—
32	NC	This pin is not used.	—	—
33	NC	Connect to GND.	—	—
34	DAC1 (SYNC OUT)	Outputs 1-bit DAC or separated SYNC. Open-collector output.		DC or SYNC OUT 
35	VP OUT	Outputs vertical pulse. Applying current to this pin, performs external blanking by OR-ing with internal blanking. Note: Changing H-position varies VP output width. Use the start phase only for VP output.		VP output:  Start phase V-BLK input current: 780 μA to 1 mA
36	NC	This pin is not used. Connect to GND.	—	—

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
37	H-OUT	Horizontal output pin. Open-collector output.		
38	DEF/DAC GND	GND pin for DEF/DAC block	—	—
39	FBP IN	Inputs FBP for horizontal AFC. Sets H-BLK width.		
40	H CURVE CORRECTION	Adjusts screen curve at high voltage fluctuation. Input AC component of high voltage fluctuation. When not used, connect 0.01-μF capacitor between this pin and GND.		DC
41	H-FREQ SW2	Switches horizontal frequency (Switch 2). Leave this pin open when horizontal frequency is switched by Bus controlling. Controlling this pin prevails over Bus control. (Refer to Table 1: Bus control function.) When this IC is used for CRT, frequency of horizontal output (pin 37) is controlled according to voltage of this pin. DC voltage that is generated by dividing resistor of DEF V <sub>CC</sub> (pin 45) should be used to control this pin.		<p>At BUS control (horizontal frequency) : output voltage value</p> <ul style="list-style-type: none"> <li>28 k/15 kHz : DC 9 V</li> <li>31 kHz : DC 6 V</li> <li>33 kHz : DC 3 V</li> <li>37 k/45 kHz : DC 0 V</li> </ul> <p>At pin 22 control, horizontal frequency and input voltage value</p> <ul style="list-style-type: none"> <li>0 to 1.0 V : 37 k/45 kHz</li> <li>2.0 V to 4.0 V : 33 kHz</li> <li>5.0 V to 7.0 V : 31 kHz</li> <li>8.0 V to 9.0 V : 28 k/15 kHz</li> </ul>
42	HVCO	Connects ceramic oscillator for horizontal oscillation. Use Murata "CSBLA503KECF30".		—
43	NC	This pin is not used. Connect to GND.	—	—

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
44	AFC FILTER	Connects filter for detecting AFC.		DC
45	DEF/DAC V <sub>CC</sub>	V <sub>CC</sub> pin for DEF/DAC block. See "Maximum Ratings" about the supply voltage.	—	—
46	NC	This pin is not used. Connect to GND.	—	—
47	CP OUT	Outputs internal clamp pulse (CP).		
48	NC	This pin is not used. Connect to GND.	—	—
49	SCP IN	Inputs SCP from up converter. Input signals are clamp pulse (CP) and black peak detection stop pulse (BPP).		2.2 V to 2.8 V : BPP 4.2 V to 9 V : CP
50	HD IN	Inputs horizontal sync HD signal. Inputs positive- or negative-polarity signals.		
51	NC	This pin is not used. Connect to GND.	—	—
52	VD IN	Inputs vertical sync VD signal. Inputs positive- or negative-polarity signals.		

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
53	SYNC IN	Inputs Y signal with sync signal via clamp capacitor.		White 100%: 1 V <sub>p-p</sub> or 
54	NC	This pin is not used. Connect to GND.	—	—
55	H-FREQ SW1	Switches horizontal frequency (Switch 1). Leave this pin open when horizontal frequency is switched by Bus controlling. Controlling this pin prevails over Bus control. (Refer to Table 1: Bus control function.) When this IC is used for CRT, connect this pin to DEF V <sub>CC</sub> (pin 45) or DEF GND (pin 38). If it is not necessary to control this pin on CRT, connect this pin directly to DEF V <sub>CC</sub> or DEF GND on the PCB.		DEF V <sub>CC</sub> or DEF GND
56	NC	This pin is not used. Connect to GND.	—	—
57	VSM FILTER	Connects VSM output filter. Please connect 0.01-μF capacitor between this pin and GND.		DC
58	COLOR LIMITER	Connects filter for detecting color limit.		DC
59	NC	This pin is not used. Connect to GND.	—	—

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
60	$C_{r2}/P_{r2}$ IN	Inputs $C_{r2}/P_{r2}$ signal via clamp capacitor.		700 mVp-p700 mVp-p at 100% color bar for $C_{r1}/P_{r1}$
61	$C_{b2}/P_{b2}$ IN	Inputs $C_{b2}/P_{b2}$ signal via clamp capacitor.		700 mVp-p at 100% color bar for $C_{b1}/P_{b1}$
63	Y2 IN	Inputs Y2 signal via clamp capacitor.		1 Vp-p (including sync) at 100% color bar or 
62	NC	This pin is not used. Connect to GND.	—	—
64	LIGHT AREA DET FILTER	Connects filter for detecting light area. Voltage of this pin controls dynamic $\gamma$ circuit gain for light area.		DC
65	Y/C GND	GND pin for Y/C block	—	—
66	$C_{r1}/P_{r1}$ IN	Inputs $C_{r1}/P_{r1}$ signal via clamp capacitor.		700 mVp-p700 mVp-p at 100% color bar for $C_{r1}/P_{r1}$
67	$C_{b1}/P_{b1}$ IN	Inputs $C_{b1}/P_{b1}$ signal via clamp capacitor.		700 mVp-p at 100% color bar for $C_{b1}/P_{b1}$
68	Y1 IN	Inputs Y1 signal via clamp capacitor.		1 Vp-p (including sync) at 100% color bar or 
69	NC	This pin is not used. Connect to GND.	—	—

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
70	BPH FILTER	<p>Connects filter for detecting black peak.</p> <p>Voltage of this pin controls black stretch gain.</p> <p>Leaving Y open and setting the test circuit SW 2 = C enable to monitor H/V-BPP (black-stretch-stop pulse) width.</p>		DC
71	DARK AREA DET FILTER	<p>Connects filter for detecting dark area.</p> <p>Voltage of this pin controls dynamic <math>\gamma</math> circuit gain for dark area.</p>		DC
72 73	NC	<p>This pin is not used.</p> <p>Connect to GND.</p>	—	—
74	APL FILTER	<p>Connects filter for correcting DC restoration rate.</p> <p>Leaving this pin open enables to monitor Y signal after black stretch and dynamic <math>\gamma</math>.</p>		—
75	Y/C VCC	<p>VCC pin for Y/C block.</p> <p>See "Maximum Ratings" about the supply voltage.</p>	—	—
76	NC	<p>This pin is not used.</p> <p>Connect to GND.</p>	—	—
77	VSM OUT	<p>Outputs Y signal for VSM that passed through HPF circuit (first differential circuit).</p> <p>Output signals are muted according to pins 1, 2, and 80.</p>	See pin 57.	—
78	ABCL IN	<p>Inputs ABL and ACL signals.</p> <p>Sets gain and start point of ABL and dynamic ABL signal according to bus controlling.</p>		DC

Pin No.	Pin Name	Function	Interface Circuit	Input Signal/Output Signal
79	Y <sub>M</sub> /P-MUTE/BLK	High-speed halftone switch for internal RGB signal. Enables picture mute and blanking.		0 to 0.5 V : Internal 1.2 V to 1.8 V : Half Tone 2.7 V to 4.0 V : P-Mute 7 V to 9 V : Blanking

## Bus Control Features

### Write Mode

Resister Name	Description	Preset Value
H-FREQ1/2	Switches horizontal oscillation frequency. (See the appendix 1)	33.75 kHz
H-DUTY	Switches horizontal output duty. 0: 41% 1: 47%	41%
YUV-SW	Switches YUV input. 0: INPUT-1 (Y1/C <sub>b1</sub> /C <sub>r1</sub> ) 1: INPUT-2 (Y2/C <sub>b2</sub> /C <sub>r2</sub> )	INPUT-1
DAC 1	Switches DAC controlling output. 0: OPEN (high) 1: ON (low) Controls 1-bit DAC of open-collector when TEST is 00. Outputs H/C-SYNC from pin 34 when TEST is 01.	OPEN
DAC 2	Switches DAC controlling output. 0: ON (low), 1: OPEN (high) Controls 1-bit DAC of open-collector when TEST is 00. Outputs ACB reference pulse from pin 23 when TEST is 01.	ON
SYNC-SW	Switches sync input. 0: Selects HD/VD input. 1: Selects SYNC input.	HD/VD
HORIZONTAL POSITION	Adjusts horizontal picture position (phase). 0000000: -12.5% 1111111: +12.5% Note: VP output width (pin 35) varies with a change of horizontal position.	CENTER
CLP-PHS	Switches clamp pulse phase. 0: 0.7- $\mu$ s (2.5%) width, 1.1- $\mu$ s (3.8%) delay from HD stop phase. 1: 0.7- $\mu$ s (2.4%) width, 0.2- $\mu$ s (0.7%) delay from HD stop phase when no signal, 0.8- $\mu$ s (2.7%) width that is 1.2- $\mu$ s (4.2%) delay from FBP start phase. Also switches CP phase of CP-OUT (pin 47).	1.1- $\mu$ s delay
ACB MODE	Sets ACB mode; Sets converged reference level. 00: ACB OFF (cutoff BUS control), 01: ACB ON (5 IRE), 10: ACB ON (10 IRE) 11: ACB ON (20 IRE)	ACB ON (10 IRE)
SCP-SW	SCP (sand castle pulse) Switches modes. 0: Internal Mode 1: External input Mode	Internal Mode
HBP-PHS1/2	Switches phase of black-stretch-detection stop pulse. HBP-PHS1 = 0 and HBP-PHS2 = 0: FBP $\pm$ 3% HBP-PHS1 = 0 and HBP-PHS2 = 1: FBP $\pm$ 8% HBP-PHS1 = 1 and HBP-PHS2 = 0: FBP $\pm$ 13% HBP-PHS1 = 1 and HBP-PHS2 = 1: FBP $\pm$ 18% Leaving Y open and setting the test circuit SW2 to C enable to monitor H/V-BPP (black-stretch-detection stop pulse) width through pin 70.	$\pm$ 3%
SYNC SEP-LEVEL	Switches Sync SEP-level. 00: 16% 01: 24% 10: 32% 11: 40% (At 1125I/60)	16%
TEST	Test Mode: Controls 1-bit DAC of open-collector when TEST is 00. Outputs H/C-SYNC from pin 34, and ACB reference pulse from pin 23 when TEST is 01. Do not set TEST to 10/11 for that is shipment TEST Mode.	00

Resister Name	Description	Preset Value
V-BLK PHASE	Switches vertical BLK stop phase. 00000: 16 H~ 11110: 46 H (1 H/STEP) 11111: Internal H/V-BLK OFF Please set ACB Mode to OFF when internal H/V-BLK is OFF (11111).	32 H
V-FREQUENCY	Vertical free-run frequency: Sets V pull-in range. (See Appendix 2.)	1281 H
COMPRESSION-BLK PHASE-1/2	Compression BLK phase: Sets BLK for upper and lower parts of screen. (See Appendix 3.)	CENTER, OFF
P-MODE1/2	Picture Mode: Sets picture mute, halftone, blue background, and Y mute. (See Appendix 4.)	P-MUTE 1
UNI-COLOR	Unicolor adjustment: 0000000: -16dB~ 1111111: 0dB	min
BRIGHTNESS	Brightness adjustment: 00000000: -40 IRE 11111111: +40 IRE	CENTER
OSD-ACL	OSD-ACL; 0: OFF 1: ON	ON
COLOR	Color adjustment: 0000000: COLOR MUTE, 0000001: -20dB or more 1111111: +4dB	C-MUTE
TINT	Tint adjustment: 0000000: -32 deg~ 1111111: +32 deg	±0 deg
PICTURE-SHARPNESS	Sharpness adjustment: 0000000: -10dB or more 1000000: +10dB 1111111: +17.5dB (at peak FREQ)	CENTER
BLS <sub>γ</sub>	Blue stretch $\gamma$ correction: B-axis correction 0: OFF 1: ON	OFF

**Appendix 1: Horizontal Frequency**

Pin Voltages (V)		Bus Data			H-Frequency (kHz)
Pin 55	Pin 41	00-D0	00-D7	00-D6	
DEF GND (0~1.0)	DEF V <sub>CC</sub> (8.0~9.0)	0	0	0	28.125
	6.0 (5.0~7.0)	0	0	1	31.5
	3.0 (2.0~4.0)	0	1	0	33.75
	DEF GND (0~1.0)	0	1	1	37.9
DEF V <sub>CC</sub> (8.0~9.0)	DEF V <sub>CC</sub> (8.0~9.0)	1	0	0	15.75
	6.0 (5.0~7.0)	1	0	1	31.5
	3.0 (2.0~4.0)	1	1	0	33.75
	DEF GND (0~1.0)	1	1	1	45

Note 1: Controlling pins prevails over BUS control. When the TA1360F is used for CRT, control horizontal oscillation frequency by pins 41 and 55. (See the pin descriptions for details.)

Note 2: Horizontal output frequency may not be switched at once but may takes two steps if switching pins 41 and 55 is controlled at the same time. Switching horizontal output frequency may cause deterioration of the horizontal transistor. Thus, be sure to take account of applications, included software.

**Appendix 2; Vertical Frequency**

Data	V Pull-in Range	V-BPP		Example of Format/V (H)-Frequency
		Start Phase	Stop Phase	
000	48~1281 H	1100 H	V-BLK P. (C.BLK P.) +20 H	1125P/30 Hz (33.75 kHz)
001	48~849 H	730 H		750P/60 Hz (45 kHz) (750P/50Hz(37.5 kHz))
010	48~725 H	600 H		625P/50 Hz (31.5 kHz) SVGA/60 Hz(37.9 kHz)

001	720 H~748 H	
010	592 H~620 H	
011	528 H~556 H	
100	488 H~516 H	
101	280 H~308 H	
110	224 H~252 H	
111	C-BLK OFF	

\*: C-BLK1 = 1111: C-BLK1 OFF

### Appendix 4; P-Mode

05-D7	1A-D1	1A-D0	MODE	Description
0	0	0	NORMAL 1	P-Mute and halftone the main signal by pin Y <sub>M</sub> . Insert analog RGB-IN by Ys3, and OSD-IN by Ys1/Ys2. Analog RGB-IN > P-Mute
0	0	1	Y-MUTE	Full-screen-mute process is executed on Y of main signal by BUS. Insert analog RGB-IN by Ys3, and OSD-IN by Ys1/Ys2. Analog RGB-IN > P-Mute
0	1	0	Y <sub>M</sub> 1	Full-screen-halftone process is executed on main signal by BUS. Insert P-Mute by pin Y <sub>M</sub> , and analog RGB-IN by Ys3. Ys1/Ys2 blends OSD-IN and main halftone signal. Analog RGB-IN > P-Mute
0	1	1	BB	Blue background process is executed on main signal by BUS. Insert P-Mute by pin Y <sub>M</sub> , analog RGB-IN by Ys3, and OSD-IN by Ys1/Ys2 Analog RGB-IN > P-Mute
1	0	0	P-MUTE 1	Full-screen-mute process is executed on main signal by BUS. Insert analog RGB-IN by Ys3, and OSD-IN by Ys1/Ys2. Analog RGB-IN > P-Mute
1	0	1	Y <sub>M</sub> 2	Full-screen-halftone process is executed on main signal by BUS. Insert P-Mute by pin Y <sub>M</sub> , and analog RGB-IN by Ys3. Ys1/Ys2 blends OSD-IN and main halftone signal P-Mute > Analog RGB-IN
1	1	0	P-MUTE 2	Full-screen-mute process is executed on main signal and analog RGB-IN by BUS. Insert OSD-IN by Ys1/Ys2. P-Mute > Analog RGB-IN
1	1	1	NORMAL 2	P-Mute and halftone process is executed on the main signal by pin Y <sub>M</sub> . Analog RGB-IN is inserted by Ys3, and OSD-IN by Ys1/Ys2. P-Mute > Analog RGB-IN

Output priority; (000)~(100): Main signal < BB < P-MUTE < RGB-IN < OSD-IN  
(101)~(111): Main signal < BB < RGB-IN < P-MUTE < OSD-IN

### Appendix 5; DR-R, DR-B/G

DR-R	DR-B/G	Reference Axis	Drive Gain1	Drive Gain2
0	0	R	G	B
0	1	R	G	B
1	0	G	R	B
1	1	B	G	R

### Read Function

Signal	Function
POR	Power-on reset: 0: RESISTER PRESET 1: Normal After power on, 0 is returned at first read; 1, at second and subsequent reads.
IK-IN	Detects IK input; detects input through pin 8. 0: NG (no signal) 1: OK (signal detected)
RGB-OUT	Detects RGB-OUT self-check; detects output of pins 12, 13, 14. 0: NG (no signal) 1: OK (signal detected) Detects signal when all three outputs hsvc signals. Small signals are not detected.
YUV-IN	Detects YUV-IN self-check; detects input of pins 60, 61 63 or pins 66, 67, 68. 0: NG (no signal) 1: OK (signal detected) Detects signal when all three inputs are AC signals. Small signals or signals like DC voltage are not detected.
H-OUT	Detects H-OUT self-check; detects output of pin 37. 0: NG (no signal) 1: OK (signal detected)
VP-OUT	Detects VP-OUT self-check; detects output of pin 35. 0: NG (no signal) 1: OK (signal detected)
RGB-IN	Detects RGB-IN self-check; detects input of pins 24, 25, 26. 0: NG (no signal) 1: OK (signal detected) Detects signal when all three inputs are AC signals. Small signals or signals like DC voltage are not detected.
SYNC-IN	Detects SYNC-IN self-check; detects input of pin 53. 0: NG (no signal), 1: OK (signal detected)

## How to Transmit/Receive Via I<sup>2</sup>C Bus

Slave Address: 88H

A6	A5	A4	A3	A2	A1	A0	W/R
1	0	0	0	1	0	0	0/1

### Start and Stop Conditions

### Bit Transfer

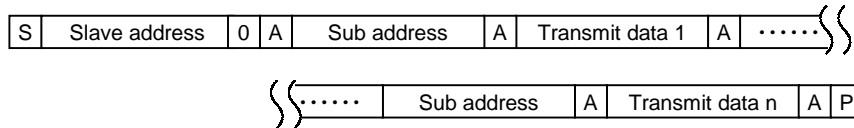

### Acknowledgement

**Data Transmit Format 1**

**Data Transmit Format 2**

**Data Receive Format**

To receive data, the master transmitter changes to the receiver immediately after the first acknowledgement. The slave receiver changes to the transmitter. The stop condition is always created by the master. Details are provided in the Philips I<sup>2</sup>C specifications.

**Optional Data Transmit Format**

In this way, sub addresses are automatically incremented from the specified sub address and data are set. Purchase of TOSHIBA I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

## Maximum Ratings (Ta = 25°C)

Characteristics	Symbol	Rating		Unit
Supply voltage	V <sub>CCmax</sub>	12		V
Input pin signal voltage	e <sub>inmax</sub>	9		Vp-p
Power dissipation	P <sub>D</sub> (Note 3)	2604		mW
Power dissipation reduction rate depending on temperature	1/θ <sub>ja</sub>	20.8		mW/°C
Operating temperature	T <sub>opr</sub>	-20 to 65	-20 to 70	°C
Storage temperature	T <sub>stg</sub>	-55 to 150		°C
Supply voltage (pins 16, 45 and 75)	min	8.7	8.5	V
	typ.	9.0	8.8	
	max	9.3	9.1	

Note 3: See the following Figure A. (With device mounted on a PCB whose dimensions are 114.3 mm × 76.2 mm × 1.6 mm and whose surface is 20% copper. Mount the device on a PCB of at least these dimensions and whose surface is at least 20% copper.)

When using in -25 to 70°C of operating temperature, set the IC's power supply voltage (pins 16, 45, 75) to 8.8 V (±0.3 V).

When designing a set, make sure that the IC can radiate heat because the TA1360AFG has low thermal capacity. Note that the power dissipation varies greatly according to conditions of a board.

**Figure A Power Dissipation Reduction Curve**

## Note 4: Power supply sequence

At power-on, power should be supplied to the power supply pins according to the following sequence:

1. Pin 31 ( $I^2L$  V<sub>DD</sub>)
2. Pin 45 (DEF/DAC V<sub>CC</sub>)
3. Pins 16 and 75 (YC V<sub>CC</sub>/RGB V<sub>CC</sub>)

Supply power to pin 37 via zener diode through resistor from pin 45. (See "Application Circuit".)

BUS preset value is become undefined and caused malfunction of the IC unless supplying power to all supply pins or follow the power supply sequence described above. When the frequency of horizontal output (pin 37) became undefined, horizontal transistor may be damaged. When the TA1360F is used for CRT, control horizontal oscillation frequency by pins 41 and 55.

**Figure B** Timing chart that indicates the timing from power-on till horizontal output. (At  $T_a = 25\text{ C}^\circ$ )

## Operating Conditions

Characteristics	Description		Min	Typ.	Max	Unit

## Test Condition for Picture Quality (Sharpness) Block

### Common Test Condition for Picture Quality (Sharpness) Block

1. SW67 = SW66 = B, SW63 = B, SW60 to SW61 = B, SW44 = ON, SW40 = B, SW18 to SW26 = A, SW77 = OPEN
2. Send bus control data as preset values, turn ACB operation switching to ACB OFF (00), select Sync input (1), turn P-MODE to Normal 1(000), WPL-LEVEL to max (111), and change subaddress (1C) to (03).
3. Input sync signal, which is in sync with input signal for testing except "Sweep", to #53 (Sync input). "H-Freq." should be the same frequency as the one of #53.
4. Set Y/color difference input mode to (0), sync separator level to 20 % (01), and vertical free-running frequency to 307H (110).

Note No.	Characteristics	Test Conditions					Test Method (Test condition: $V_{CC} = 9 V/2$ , $T_a = 25 \pm 3^\circ C$ )
		SW Mode					
		SW71	SW70	SW68	SW64	SW74	
P01	Black detection level shift	B	C	C	B	OPEN	<ol style="list-style-type: none"> <li>1. Connect external power supply PS to #68, and monitor #70 and #74.</li> <li>2. Set black stretch point 1 to OFF (000), and black detection level to 0 IRE (1).</li> <li>3. Increase PS voltage from 4.95 V in steps of 1 mV. At the moment when #70 picture period (High) drops to Low level, monitor DC difference on #74 <math>V_B</math>.</li> <li>4. Set black detection level to 3 IRE (0).</li> <li>5. Repeat the step 3 above and monitor DC difference, <math>V_{B3}</math> on #74.</li> </ol>
P02	Black stretch amp maximum gain	B	A	A	B	OPEN	<ol style="list-style-type: none"> <li>1. Set SW70 to A (maximum gain), and input 500-kHz sine wave to TPA.</li> <li>2. Measure black peak detection pulse phase.</li> </ol> 
HA10	FBP input threshold	<ol style="list-style-type: none"> <li>Set subaddress (00) data to 40H.</li> <li>Input signal B (as shown in the figure below) to TP50.</li> <li>Increase amplitude of FBP signal to be input to #39 (FBP input) from 0 Vp-p. When #37 (H-OUT) phase locks with that of signal B, measure #39 input amplitude <math>V_{thFBP}</math>.</li> </ol> 

Note	Characteristics	Test Conditions
HB01	H-OUT pulse duty	<ol style="list-style-type: none"> <li>No signal input.</li> <li>Measure T1 and T2 (as shown in the figure below) from #37 (H-OUT) output waveform when subaddress (00) data is 80H and A0H. Calculate duties (TH<sub>A</sub> and TH<sub>B</sub>) using the following equation:  <math display="block">TH = T1 / (T1 + T2) \times 100 \%</math> </li> </ol>  <p>#37 waveform</p>
HB02	Horizontal free-run frequency	<ol style="list-style-type: none"> <li>Set SW44 to open.</li> <li>Set subaddress (00) data to 01H and measure horizontal free-run frequency (F15K) according to #37 (H-OUT) output waveform.</li> <li>Set subaddress (00) data to 00H, 41H, 81H, C0H, and C1H. Measure horizontal free-run frequency F28K, F31K, F33K, F37K, and F45K as in the step 2 above.</li> </ol>
HB03	Horizontal oscillation frequency variable range	<ol style="list-style-type: none"> <li>Set subaddress (00) data to 01H.</li> <li>Connect 10-kΩ resistor between #44 and V<sub>CC</sub>. Measure horizontal frequency (F15K<sub>MIN</sub>) according to #37 (H-OUT) output waveform.</li> <li>Connect 68-kΩ resistor between #44 and GND. Measure horizontal frequency (F15K<sub>MAX</sub>) according to #37 (H-OUT) output waveform.</li> <li>Set subaddress (00) data to 00H, 41H, 81H, C0H, and C1H. Repeat the steps 2 and 3 above and measure horizontal frequencies F28K<sub>MIN</sub>, F28K<sub>MAX</sub>, F31K<sub>MIN</sub>, F31K<sub>MAX</sub>, F33K<sub>MIN</sub>, F33K<sub>MAX</sub>, F37K<sub>MIN</sub>, F37K<sub>MAX</sub>, F45K<sub>MIN</sub>, and F45K<sub>MAX</sub>.</li> </ol>
HB04	Horizontal oscillation control sensitivity	<ol style="list-style-type: none"> <li>Set SW44 to open.</li> <li>Connect external power supply to TP44, and set subaddress (00) data to 01H.</li> <li>Apply V<sub>44</sub> + 0.05 V, and V<sub>44</sub> - 0.05 V to TP44. Measure frequencies FA and FB according to #37 (H-OUT) output waveform. Calculate frequency change rate (BH15K) using the following equation.  <math display="block">BH15K = (FB - FA) / 0.1</math> </li> <li>Set subaddress (00) data to 00H, 41H, 81H, C0H, and C1H. Repeat the step 2 above, and measure frequency change rate BH28K, BH31K, BH33K, BH37K, and BH45K</li> </ol>
HB05	H-OUT output voltage	<ol style="list-style-type: none"> <li>Set SW37 to open.</li> <li>Measure voltage at High (V37<sub>H</sub>) and Low (V37<sub>L</sub>) of #37 (H-OUT) output waveform.</li> </ol>

Note	Characteristics	Test Conditions
V01	VP output pulse width, Vertical free-run (maximum pull-in range)	<ol style="list-style-type: none"> <li>Input signal D (shown in the figure below) to TP50, and signal E (shown in the figure below) to #39 (FBP input).</li> <li>Measure VP output pulse width (VPw) according to TP35 output waveform.</li> <li>Measure VP pull-in range (VPt0) according to TP35 output waveform.</li> <li>Set subaddress (03) data to 01H, 02H, 03H, 04H, 05H, and 06H. Measure pull-in range VPt1, VPt2, VPt3, VPt4, VPt5, and VPt6 as in the step 3 above.</li> </ol> 
V02	Vertical minimum pull-in range	<ol style="list-style-type: none"> <li>Repeat the step 1 of Note #V01.</li> <li>Input signal F (shown in the figure below) to TP52.</li> <li>Increase signal-F cycle from 30 H. Measure the cycle (<math>T_{VPULL}</math>) when phase locks with that of TP35.</li> </ol> 

Note	Characteristics	Test Conditions
V03	Vertical black peak detection pulse	<p>1. Repeat the step 1 of Note #V01. Set SW70 to C, and SW68 to C.</p> <p>2. Input signal F (shown in the figure below) to TP52.</p> <p>3. Measure phase differences <math>VBPP_{0E}</math> and <math>VBPP_{0S}</math> according to #47 output waveform.</p> <p>4. Set subaddress (03) data to 01H, 02H, 03H, 04H, 05H, and 06H. Measure phase differences <math>VBPP_{1E}</math>, <math>VBPP_{1S}</math>, <math>VBPP_{2E}</math>, <math>VBPP_{2S}</math>, <math>VBPP_{3E}</math>, <math>VBPP_{3S}</math>, <math>VBPP_{4E}</math>, <math>VBPP_{4S}</math>, <math>VBPP_{5E}</math>, <math>VBPP_{5S}</math>, <math>VBPP_{6E}</math>, and <math>VBPP_{6S}</math> as in the step 3 above.</p> 
V04	Vertical blanking stop phase	<p>1. Repeat the step 1 of Note #V01.</p> <p>2. Input signal F (shown in the figure below) to TP52.</p> <p>3. Set subaddress (03) data to 00H and F0H. Measure blanking stop phase <math>VBLK_{MIN}</math> and <math>VBLK_{MAX}</math> according to #12 output waveform.</p>

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.  
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
