# 20 mm (0.8 inch) Seven Segment Displays 

Technical Data

## Features

- Industry Standard Size
- Industry Standard Pinout 15.24 mm ( 0.6 in.) DIP Leads on 2.54 mm ( 0.1 in .) Centers
- Choice of Colors

Red, AlGaAs Red, High
Efficiency Red, Yellow, Green

- Excellent Appearance

Evenly Lighted Segments Mitered Corners on Segments Gray Package Gives Optimum Contrast
$\pm 50^{\circ}$ Viewing Angle

- Design Flexibility

Common Anode or Common Cathode
Left and Right Hand Decimal Points
$\pm 1$. Overflow Character

- Categorized for Luminous Intensity
Yellow and Green Categorized
for Color
Use of Like Categories Yields a Uniform Display
- High Light Output
- High Peak Current
- Excellent for Long Digit

String Multiplexing
Intensity and Color
Selection Option
See Intensity and Color
Selected Displays Data Sheet

- Sunlight Viewable AlGaAs

## Description

The 20 mm ( 0.8 inch) LED seven segment displays are designed for viewing distances up to 10 metres (33 feet). These devices use an industry standard size package and pinout. All devices are available as either common anode or common cathode.

HDSP-340X Series HDSP-390X Series HDSP-420X Series HDSP-860X Series HDSP-N15X Series

These displays are ideal for most applications. Pin for pin equivalent displays are also available in a low current design. The low current displays are ideal for portable applications. For additional information see the Low Current Seven Segment Displays data sheet.

## Devices

| Red <br> HDSP- | AlGaAs $^{[1]}$ <br> HDSP- | HER <br> HDSP- | Yellow <br> HDSP- | Green <br> HDSP- | Pescription <br> Drawage |  |
| :---: | :---: | :---: | :---: | :---: | :--- | :---: |
| 3400 | N150 | 3900 | 4200 | 8600 | Common Anode Left Hand Decimal | A |
| 3401 | N151 | 3901 | 4201 | 8601 | Common Anode Right Hand Decimal | B |
| 3403 | N153 | 3903 | 4203 | 8603 | Common Cathode Right Hand Decimal | C |
| 3405 | N155 | 3905 | 4205 | 8605 | Common Cathode Left Hand Decimal | D |
| 3406 | N156 | 3906 | 4206 | 8606 | Universal $\pm 1$. Overflow ${ }^{[2]}$ | E |

## Notes:

1. These displays are recommended for high ambient light operation. Please refer to the HDSP-N10X AlGaAs data sheet for low current operation.
2. Universal pinout brings the anode and cathode of each segment's LED out to separate pins. See internal diagram E.

## Notes:

1. See Figure 1 to establish pulsed conditions.
2. Derate above $50^{\circ} \mathrm{C}$ at $0.73 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
3. Derate above $45^{\circ} \mathrm{C}$ at $0.83 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
4. See Figure 8 to establish pulsed conditions.
5. See Figure 2 to establish pulsed conditions.
6. Derate above $50^{\circ} \mathrm{C}$ at $0.54 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.
7. Derate above $55^{\circ} \mathrm{C}$ at $0.8 \mathrm{~mA} /{ }^{\circ} \mathrm{C}$.

5 . See Figure 7 to establish pulsed conditions.
9. For operation below $-20^{\circ} \mathrm{C}$, contact your local HP components sales office or an authorized distributor.

## Notes:

1. Case temperature of the device immediately prior to the intensity measurement is $25^{\circ} \mathrm{C}$.
2. The digits are categorized for luminous intensity. The intensity category is designated by a letter on the side of the package.
3. The dominant wavelength, $\lambda_{d}$, is derived from the CIE chromaticity diagram and is that single wavelength which defines the color of the device.
4. Typical specification for reference only. Do not exceed absolute maximum ratings.
5. For low current operation, the AlGaAs Red HDSP-N100 series displays are recommended. They are tested at $1 \mathrm{~mA} \mathrm{dc} / \mathrm{segment}$ and are pin for pin compatible with the HDSP-N150 series.
6. The Yellow (HDSP-4200) and Green (HDSP-8600) displays are categorized for dominant wavelength. The category is designated by a number adjacent to the luminous intensity category letter.

## Contrast Enhancement

For information on contrast enhancement please see
Application Note 1015.

## Soldering/Cleaning

Cleaning agents from the ketone family (acetone, methyl ethyl ketone, etc.) and from the chlorinated hydrocarbon family (methylene chloride, trichloroethylene, carbon tetrachloride, etc.) are not recommended for cleaning LED parts. All of these various solvents attack or dissolve the encapsulating epoxies used to form the package of plastic LED parts.

For information on soldering
LEDs please refer to Application Note 1027.
