

**2.5V 20-Bit Bus Interface  
Flip-Flop with 3-State Outputs**

**Product Features**

- PI74AVC+16821 is designed for low-voltage operation,  $V_{CC} = 1.65V$  to  $3.6V$
- True  $\pm 24mA$  Balanced Drive @  $3.3V$
- $I_{OFF}$  supports partial power-down operation
- $3.6V$  I/O Tolerant Inputs and Outputs
- All outputs contain a patented DDC (Dynamic Drive Control) circuit that reduces noise without degrading propagation delay
- Industrial operation:  $-40^{\circ}C$  to  $+85^{\circ}C$
- Available Packages:
  - 56-pin 240 mil wide plastic TSSOP (A)
  - 56-pin 173 mil wide plastic TVSOP (K)

**Description**

Pericom Semiconductor's PI74AVC+ series of logic circuits are produced using the Company's advanced submicron CMOS technology, achieving industry leading speed.

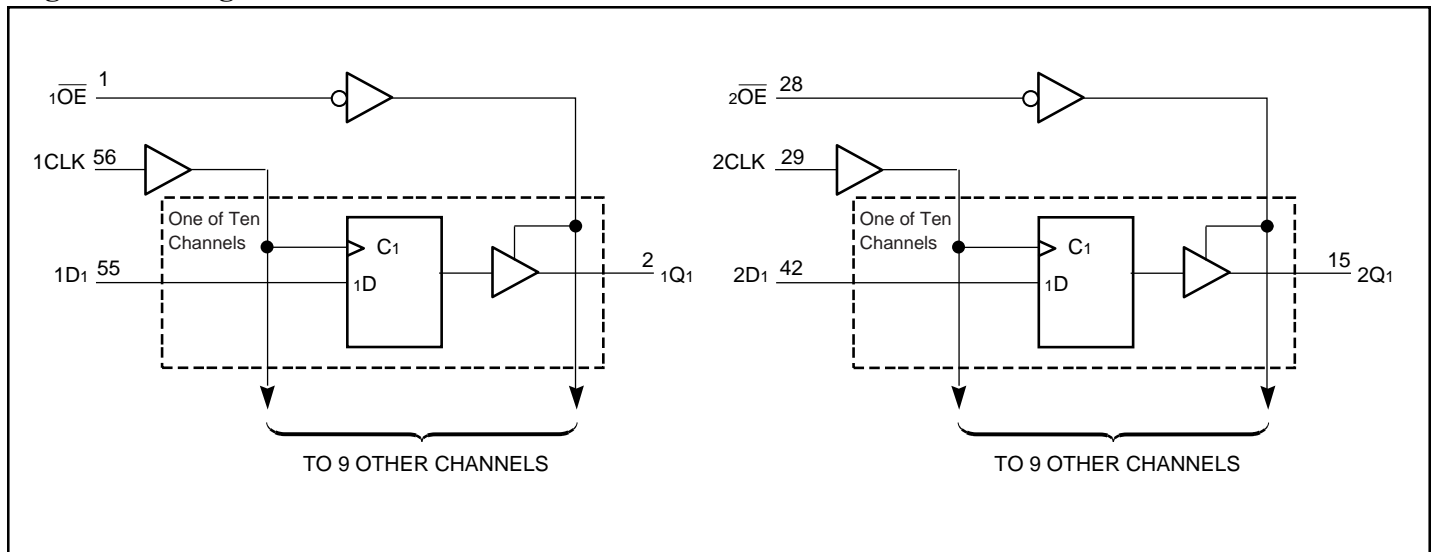

The PI74AVC+ 16821 is a 20-bit bus interface flip-flop designed for  $1.65V$  to  $3.6V$   $V_{CC}$  operation. It can be used as two 10-bit flip-flops or one 20-bit flip-flop. The 20 flip-flops are edge-triggered D-type flip-flops. On the positive transition of the clock (CLK) input, the device provides true data at the Q outputs.

A buffered output-enable ( $\overline{OE}$ ) input can be used to place the ten outputs in either a normal logic state (HIGH or LOW level) or a high-impedance state. In the high-impedance state, the outputs neither load nor drive the bus lines significantly. The high-impedance state and increased drive provide the capacity to drive bus lines without the need for interface or pullup components.

$\overline{OE}$  does not affect the internal operation of the flip-flops. Old data can be retained or new data can be entered while the outputs are in the high-impedance state.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current sinking capability of the driver.

**Logic Block Diagram**

### Pin Description

| Pin Name        | Description                      |
|-----------------|----------------------------------|
| $\overline{OE}$ | Output Enable Input (Active LOW) |
| CLK             | Clock Input (Active HIGH)        |
| Dx              | Data Inputs                      |
| Qx              | 3-State Outputs                  |
| GND             | Ground                           |
| VCC             | Power                            |

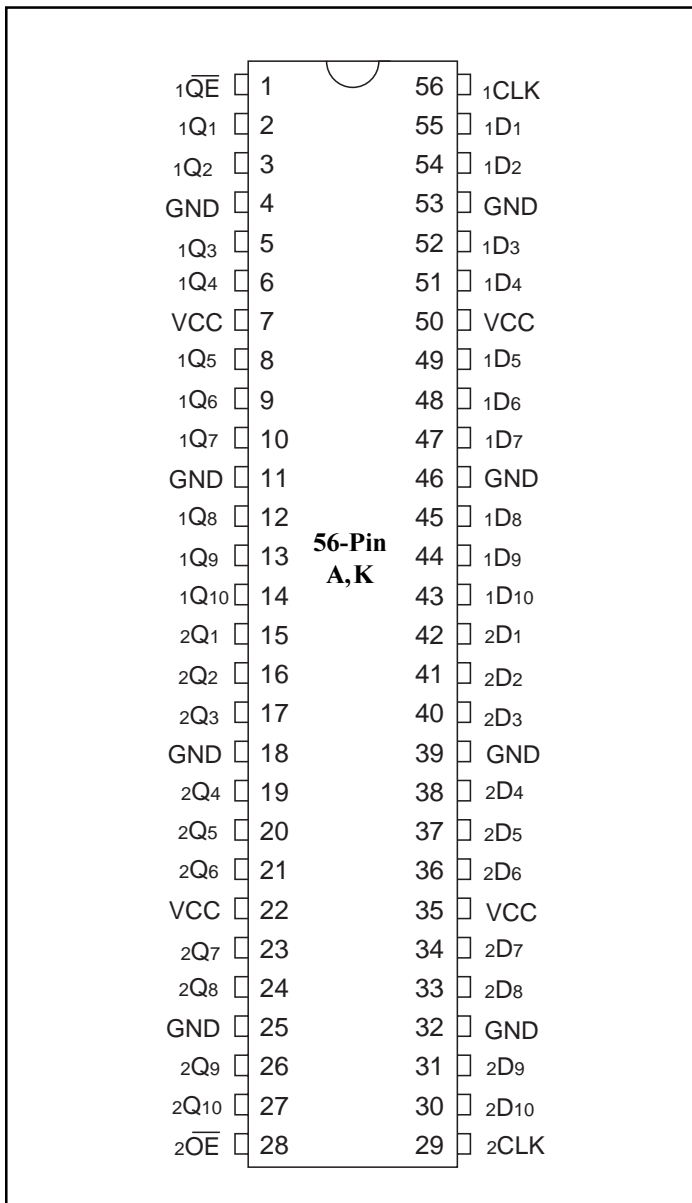

### Truth Table<sup>(1)</sup>

| Inputs           |        |   | Outputs |
|------------------|--------|---|---------|
| $\overline{OEn}$ | CLK    | D | Qn      |
| L                | ↑      | H | H       |
| L                | ↑      | L | L       |
| L                | H OR L | X | Q0      |
| H                | X      | X | Z       |

**Note:**

1. H = High Signal Level
- L = Low Signal Level
- X = Irrelevant
- Z = High Impedance
- ↑ = LOW-to-HIGH Transition
- n = 1,2

### Pin Configuration

### Maximum Ratings

(Above which useful life may be impaired. For user guidelines, not tested.)

|   |                        |
|---|------------------------|
| Supply voltage range, $V_{CC}$ .....  | -0.5V to +4.6V         |
| Input voltage range, $V_I$ .....  | -0.5V to +4.6V         |
| Voltage range applied to any output in the high-impedance or power-off state, $V_O^{(1)}$ ..... | -0.5V to +4.6V         |
| Voltage range applied to any output in the high or low state, $V_O^{(1,2)}$ .....               | -0.5V to $V_{CC}+0.5V$ |
| Input clamp current, $I_{IK} (V_I < 0)$ .....   | -50mA                  |
| Output clamp current, $I_{OK} (V_O < 0)$ .....  | -50mA                  |
| Continuous output current, $I_O$ .....  | $\pm 50mA$             |
| Continuous current through each $V_{CC}$ or GND .....   | $\pm 100mA$            |
| Package thermal impedance, $\theta_{JA}^{(3)}$ : Package A .....                                | 64°C/W                 |
| Package K .....   | 48°C/W                 |
| Storage Temperature range, $T_{stg}$ .....  | -65°C to 150°C         |

**Note:**

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

**Notes:**

1. Input & output negative-voltage ratings may be exceeded if the input and output current rating are observed.
2. Output positive-voltage rating may be exceeded up to 4.6V maximum if the output current rating is observed.
3. The package thermal impedance is calculated in accordance with JESD 51.

### Recommended Operating Conditions<sup>(1)</sup>

|   |                             | Min.                 | Max.                 | Units |
|---|-----------------------------|----------------------|----------------------|-------|
| $V_{CC}$ Supply Voltage                 | Operating                   | 1.65                 | 3.6                  | V     |
|   | Data retention only         | 1.2                  |                      |       |
| $V_{IH}$ High-level Input Voltage       | $V_{CC} = 1.2V$             | $V_{CC}$             |                      |       |
|   | $V_{CC} = 1.65V$ to $1.95V$ | $0.65 \times V_{CC}$ |                      |       |
|   | $V_{CC} = 2.3V$ to $2.7V$   | 1.7                  |                      |       |
|   | $V_{CC} = 3V$ to $3.6V$     | 2                    |                      |       |
| $V_{IL}$ Low-level Input Voltage        | $V_{CC} = 1.2V$             |                      | GND                  |       |
|   | $V_{CC} = 1.65V$ to $1.95V$ |                      | $0.35 \times V_{CC}$ |       |
|   | $V_{CC} = 2.3V$ to $2.7V$   |                      | 0.7                  |       |
|   | $V_{CC} = 3V$ to $3.6V$     |                      | 0.8                  |       |
| $V_I$ Input Voltage                     |                             | 0                    | 3.6                  |       |
| $V_O$ Output Voltage                    | Active State                | 0                    | $V_{CC}$             |       |
|   | 3-State                     | 0                    | 3.6                  |       |
| $I_{OH}$ High-level output current      | $V_{CC} = 1.65V$ to $1.95V$ |                      | -6                   | mA    |
|   | $V_{CC} = 2.3V$ to $2.7V$   |                      | -12                  |       |
|   | $V_{CC} = 3V$ to $3.6V$     |                      | -24                  |       |
| $I_{OL}$ Low-level output current       | $V_{CC} = 1.65V$ to $1.95V$ |                      | 6                    |       |
|   | $V_{CC} = 2.3V$ to $2.7V$   |                      | 12                   |       |
|   | $V_{CC} = 3V$ to $3.6V$     |                      | 24                   |       |
| DtDv Input transition rise or fall rate | $V_{CC} = 1.65V$ to $3.6V$  |                      | 5                    | ns/V  |
| $T_A$ Operating free-air temperature    |                             | -40                  | 85                   | °C    |

**Notes:**

1. All unused inputs must be held at  $V_{CC}$  or GND to ensure proper device operation.

**DC Electrical Characteristics** (Over the Operating Range,  $T_A = -40^\circ\text{C} + 85^\circ\text{C}$ )

Figure 1. Load Circuit and Voltage Waveforms

Notes:

- A.  $C_L$  includes probe and jig capacitance.
- B. Waveform 1 is for an output with internal conditions such that the output is low except when disabled by the output control.  
Waveform 2 is for an output with internal conditions such that the output is high except when disabled by the output control.
- C. All input impulses are supplied by generators having the following characteristics:  $PRR \leq 10$  MHz,  $Z_O = 50\Omega$ ,  $t_R \leq 2.0ns$ ,  $t_F \leq 2.0ns$ .
- D. The outputs are measured one at a time with one transition per measurement.
- E.  $t_{PLZ}$  and  $t_{PHZ}$  are the same as  $t_{dis}$
- F.  $t_{PZL}$  and  $t_{PZH}$  are the same as  $t_{en}$
- G.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$

### PARAMETER MEASUREMENT INFORMATION

$V_{CC} = 1.8V \pm 0.15V$
