

TOSHIBA PHOTOINTERRUPTER INFRARED LED + PHOTO IC

TLP1205

TIMING SENSOR FOR COPIER, FACSIMILE,
ELECTRONIC PRINTER

TIMING DETECTION OF ENGINEERING WORK AND
CONTROL EQUIPMENT

EDGE SENSOR, OPTOELECTRONIC SWITCHES

The TLP1205 is a digital output photointerrupter with an GaAs infrared LED and a Si photo IC incorporated in the same package with a connector provided.

This product has 2 detecting gaps through which independent 2 channel outputs are obtained.

This product is the position detecting sensor suited to automated control of equipment.

When detecting a substance (when the light is shielded), the output becomes low level.

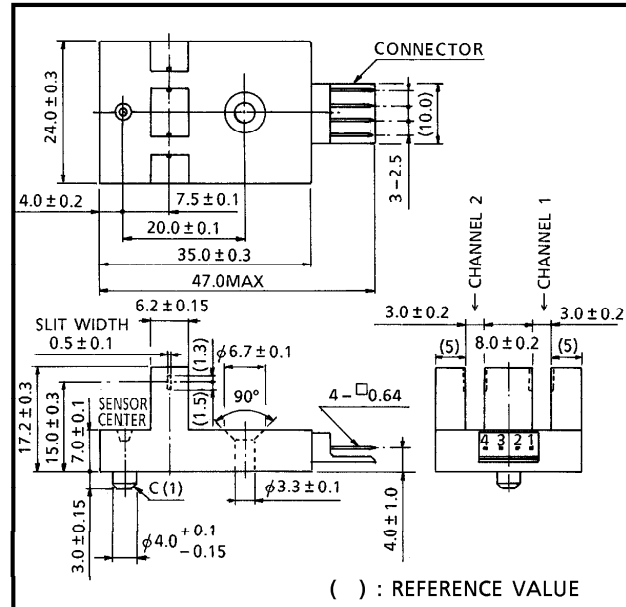

- One side mounting type.
- Supply voltage : 5V
- Digital output (with a pull-up resistor)
- Gap (2) : 3mm
- Resolution : Slit width 0.5mm
- Large output current : $I_{OL}=50\text{mA}$ (max)
- Mounting, circuit connection, maintenance, etc. are easily performed by the connector.
- Material of the package : Polycarbonate

- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- Gallium arsenide (GaAs) is a substance used in the products described in this document. GaAs dust and fumes are toxic. Do not break, cut or pulverize the product, or use chemicals to dissolve them. When disposing of the products, follow the appropriate regulations. Do not dispose of the products with other industrial waste or with domestic garbage.
- The products described in this document are subject to foreign exchange and foreign trade control laws.

PRECAUTION

Please be careful of the followings.

1. During 100 μ s after turning on V_{CC}, output voltage changes for stabilizing the inner circuit.
2. Install to the mount free of warp with the clamping torque 0.59N·m max
3. The container is made of polycarbonate. Polycarbonate is usually stable with acid, alcohol, and aliphatic hydrocarbons however, with peroxochemicals (such as benzene, toluene, and acetone), alkali, aromatic hydrocarbons, or chloric hydrocarbons, polycarbonate becomes cracked, swollen, or melted. Please take care when choosing a packaging material by referencing the table below.

<Chemicals to avoid with polycarbonate>

POSITIONING OF SHUTTER AND DEVICE

To operate correctly, make sure that the shutter and the device are positioned as shown in the figure below.

The slit pitch of the shutter must be set wider than the slit width of the device.
Determine the width taking the switching time into consideration.
