160-DOT SEGMENT DRIVER (TCP)

## GENERAL DESCRIPTION

The MSM6779B is a LCD dot matrix segment driver. Fabricated in CMOS technology, the device consists of 160 -bit latches I and II, a 160-bit level shifter, and a 4 -level driver. The MSM6779B latches the 4-bit parallel display data sent from a microcontroller or a LCD controller to generate a LCD driving signal. This MSM6779B has a power-save function that sets all the drivers except one to the low supply current status ( $\mathrm{I}_{\mathrm{DD}}$ SBY).
This driver's 3 V -operation allows significant reduction in current consumption, suitable for battery-driving. The bias voltage to specify a drive level can be supplied externally. The MSM6779B can be used for various types of LCD panels.

## FEATURES

- Logic supply voltage
: 2.7 V to 5.5 V
- LCD drive voltage
: A wide range from 14 V to 28 V
- Applicable LCD duty : $1 / 64$ to $1 / 256$
- The bias voltage can be supplied externally.
- LCD outputs : 160
- A power-save function to reduce power consumption in a large-screen LCD panel.
- A 4-bit parallel data transfer to reduces its transfer speed to $1 / 4$ of conventional serial transfer, providing low power consumption.
- Data transfer clock frequency : 6.5 MHz
- 35mm-wide-film TCP

Tin-plating
User area $: 8 \mathrm{~mm}$

## BLOCK DIAGRAM

## PIN CONFIGURATION (TOP VIEW)

Note: The drawing shown does not specify the exact outline of the TCP; it only specifies the pin layout.

## ABSOLUTE MAXIMUM RATINGS

| Parameter | Symbol | Condition | Rating | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply Voltage (1) | $\mathrm{V}_{\mathrm{DD}}$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | -0.3 to 6.5 | V |
| Supply Voltage (2) | $\mathrm{V}_{\mathrm{DD}-}-\mathrm{V}_{\mathrm{EE}}{ }^{* 1}$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | 0 to 30 | V |
| Input Voltage | $\mathrm{V}_{\mathrm{I}}$ | $\mathrm{Ta}=25^{\circ} \mathrm{C}$ | -0.3 to $\mathrm{V}_{\mathrm{DD}+}+0.3$ | V |
| Storage Temperature | $\mathrm{T}_{\text {STG }}$ | - | -30 to +85 | ${ }^{\circ} \mathrm{C}$ |

${ }^{*} 1 \mathrm{~V}_{1}>\mathrm{V}_{3}>\mathrm{V}_{4}>\mathrm{V}_{\mathrm{EE}}, \mathrm{V}_{\mathrm{DD}} \geq \mathrm{V}_{1}>\mathrm{V}_{3} \geq \mathrm{V}_{\mathrm{DD}}-10 \mathrm{~V}, \mathrm{~V}_{\mathrm{EE}}+10 \mathrm{~V} \geq \mathrm{V}_{4}>\mathrm{V}_{\mathrm{EE}}$
$\mathrm{V}_{1}=\mathrm{V}_{1 \mathrm{~L}}=\mathrm{V}_{1 \mathrm{R}}, \mathrm{V}_{3}=\mathrm{V}_{3 \mathrm{~L}}=\mathrm{V}_{3 \mathrm{R}}, \mathrm{V}_{4}=\mathrm{V}_{4 \mathrm{~L}}=\mathrm{V}_{4 \mathrm{R}}, \mathrm{V}_{\mathrm{EE}}=\mathrm{V}_{\mathrm{EEL}}=\mathrm{V}_{\mathrm{EER}}$

## RECOMMENDED OPERATING CONDITIONS

| Parameter | Symbol | Condition | Range | Unit |
| :--- | :---: | :---: | :---: | :---: |
| Supply Voltage (1) | $\mathrm{V}_{\mathrm{DD}}$ | - | 2.7 to 5.5 | V |
| Supply Voltage (2) | $\mathrm{V}_{\mathrm{DD}}-\mathrm{V}_{\mathrm{EE}}{ }^{* 1}$ | - | 14 to 28 | V |
| Operating Temperature | Top | - | -20 to +75 | ${ }^{\circ} \mathrm{C}$ |

${ }^{*} 1 \mathrm{~V}_{1}>\mathrm{V}_{3}>\mathrm{V}_{4}>\mathrm{V}_{\mathrm{EE}}, \mathrm{V}_{\mathrm{DD}} \geq \mathrm{V}_{1}>\mathrm{V}_{3} \geq \mathrm{V}_{\mathrm{DD}}-7 \mathrm{~V}, \mathrm{~V}_{\mathrm{EE}}+7 \mathrm{~V} \geq \mathrm{V}_{4}>\mathrm{V}_{\mathrm{EE}}$ $\mathrm{V}_{1}=\mathrm{V}_{1 \mathrm{~L}}=\mathrm{V}_{1 \mathrm{R}}, \mathrm{V}_{3}=\mathrm{V}_{3 \mathrm{~L}}=\mathrm{V}_{3 \mathrm{R}}, \mathrm{V}_{4}=\mathrm{V}_{4 \mathrm{~L}}=\mathrm{V}_{4 \mathrm{R}}, \mathrm{V}_{\mathrm{EE}}=\mathrm{V}_{\mathrm{EEL}}=\mathrm{V}_{\mathrm{EER}}$

Note: Unlike mold packages, TCP has a low light resistance. Therefore, they are protected from light.

## ELECTRICAL CHARACTERISTICS

## FUNCTIONAL DESCRIPTION

## Pin Descriptions

## $\mathbf{V}_{\mathrm{DD}}, \mathbf{V}_{\mathrm{SS}}$

Power supply for the device. $\mathrm{V}_{\mathrm{DD}}$ is set to 2.7 V to 5.5 V . $\mathrm{V}_{\mathrm{SS}}$ is set to 0 V .
$\mathrm{V}_{1 L}, \mathrm{~V}_{1 \mathrm{R}}, \mathrm{V}_{3 \mathrm{~L}}, \mathrm{~V}_{3 \mathrm{R}}, \mathrm{V}_{4 \mathrm{~L}}, \mathrm{~V}_{4 \mathrm{R}}, \mathrm{V}_{\text {EEL }}, \mathrm{V}_{\text {EER }}$
Bias power supply for the LCD drive voltages. Power supply should be
$V_{D D} \geq V_{1}>V_{3}>V_{4}>V_{E E}$.

## $\overline{\text { DISPOFF }}$

Input for controlling the output level of $\mathrm{O}_{1}$ to $\mathrm{O}_{160}$. The $\mathrm{V}_{1}$ level is output from $\mathrm{O}_{1}$ to $\mathrm{O}_{160}$ pins during "L" level input. Refer to Truth Table.

## DF

Input for LCD drive wave form AC synchronization.

## $\mathrm{O}_{1} \sim \mathrm{O}_{160}$

LCD drive outputs that correspond to each bit of the latch (II). Depending on the combination of the contents of the latch (display data) and DF signal, one of 4 levels $\left(V_{1}, V_{3}, V_{4}, V_{E E}\right)$ is output. Refer to Truth Table.

## CP

Clock pulse input for display data reading. Data is taken into the latch (I) at the falling edge of the clock pulse.
Use an even number for the clock number per line (the number of the clock pulses during the period from Load input to the next Load input).

## $\mathrm{EIO}_{1}, \mathrm{EIO}_{2}$

Chip Select Signal Input/Output. Input/Output are controlled by the SHL input. If the SHL input at "L"level, $\mathrm{EIO}_{1}$ is output and $\mathrm{EIO}_{2}$ is input. If the SHL input is at " H " level, $\mathrm{EIO}_{1}$ is input and $\mathrm{EIO}_{2}$ is output. If the SHL is at "L" level, the first $\mathrm{EIO}_{2}$ is fixed to " L "level, and the following $\mathrm{EIO}_{2}$ is connected to the preceding $\mathrm{EIO}_{1}$. If the SHL is at "H"level,the first $\mathrm{EIO}_{1}$ is fixed to "L" level, and the following $\mathrm{EIO}_{1}$ is connected to the preceding $\mathrm{EIO}_{2}$ as shown below.

When SHL is at "L" level

When SHL is at " H " level

## $D_{0}, D_{1}, D_{2}, D_{3}$

These are display data inputs that input data with clock synchronization. The table below shows the relationship between the LCD output for the display data and DFs and the LCD.

| Display Data | DF | LCD drive output | LCD |
| :---: | :---: | :---: | :---: |
| L | L | Non-selection level (V3) | OFF |
| H | L | Selection level (V1) | ON |
| L | H | Non-selection level (V4) | OFF |
| H | H | Selection level (VEE) | ON |

## LOAD

This is an input to simultaneously output the display data of one line stored in the latch (I). At the falling edge, the data in the latch (I) is transferred to the latch (II) end is output.

## SHL

Input to select for display data reading direction. Input of "L" level at Vss level fetches data in the direction from $\mathrm{O}_{160}$ to $\mathrm{O}_{1}$ sequentially, while input of " H " level at $\mathrm{V}_{\mathrm{DD}}$ fetches data in the direction from $\mathrm{O}_{1}$ to $\mathrm{O}_{160}$. The table below shows the relationship between read data and driver outputs ( $\mathrm{O}_{1}$ to $\mathrm{O}_{160}$ ).

| SHL | $\mathrm{ElO}_{1}$ | $\mathrm{ElO}_{2}$ | Data input | Numbers of the clock pulse |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | 40 clocks | 39 clocks | 38 clocks | ... | 3 clocks | 2 clocks | 1 clocks |
| L | Outputs | Inputs | $\mathrm{D}_{0}$ | $0_{1}$ | $0_{5}$ | O9 | ... | $0_{149}$ | $0_{153}$ | $0_{157}$ |
|  |  |  | $\mathrm{D}_{1}$ | $0_{2}$ | $0_{6}$ | $0_{10}$ | ... | $0_{150}$ | $0_{154}$ | $0_{158}$ |
|  |  |  | $\mathrm{D}_{2}$ | $0_{3}$ | $0_{7}$ | 011 | ... | $0_{151}$ | $0_{155}$ | $0_{159}$ |
|  |  |  | $\mathrm{D}_{3}$ | $0_{4}$ | $0_{8}$ | $0_{12}$ | ... | $0_{152}$ | $0_{156}$ | $0_{160}$ |
| H | Inputs | Outputs | $\mathrm{D}_{0}$ | $0_{160}$ | $0_{156}$ | $0_{152}$ | ... | 012 | $0_{8}$ | $0_{4}$ |
|  |  |  | $\mathrm{D}_{1}$ | $0_{159}$ | $0_{155}$ | $00_{151}$ | ... | 011 | $0_{7}$ | $0_{3}$ |
|  |  |  | $\mathrm{D}_{2}$ | $0_{158}$ | $0_{154}$ | 0150 | ... | $0_{10}$ | $0_{6}$ | $\mathrm{O}_{2}$ |
|  |  |  | $\mathrm{D}_{3}$ | $0_{157}$ | 0153 | $0_{149}$ | ... | 09 | $0_{5}$ | 01 |

## TRUTH TABLE

| DF | Display Data | $\overline{\text { DISPOFF }}$ | Driver output (01~0160) |
| :---: | :---: | :---: | :---: |
| L | L | H | $\mathrm{V}_{3}$ |
| L | H | H | $\mathrm{V}_{1}$ |
| $H$ | L | H | $\mathrm{V}_{4}$ |
| $H$ | H | H | $\mathrm{V}_{\mathrm{EE}}$ |
| X | X | L | $\mathrm{V}_{1}$ |

X : don't care

## NOTES ON USAGE (when turning the power ON or OFF)

If a high voltage is applied to a LCD drive system while the logic supply is floating, over-current may destroy the device, because the voltage over the LCD drive system is high.
Follow the sequence below when turning the power ON or OFF.
Power ON : Logic system ON $\rightarrow$ LCD drive system ON, or both ON
Power OFF : LCD drive system OFF $\rightarrow$ logic system OFF, or both OFF
