

FM IF Amplifier

BA401

The BA401 is a monolithic integrated circuit consisting of a single-stage differential amplifier usable as an FM IF amplifier or TV sound amplifier. It can be used as an FM IF limiter circuit as well and provides excellent characteristics. It is housed in a 5-pin SIP package to save space and improve ease-of-use.

Features

1. Suitable for use in narrowband or wideband amplification.
 2. Ideal for use as an FM IF limiter circuit.
 3. Extremely easy to use-SIP package.

Applications

FM tuners

Radios

Stereo equipment

Car stereo systems

TV sound IF stages

Dimensions (Unit: mm)

Circuit Diagram

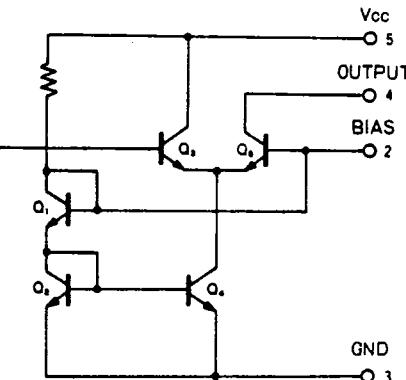

Fig. 2

Absolute Maximum Ratings ($T_A=25^\circ\text{C}$)

Parameter	Symbol	Limits	Unit
Supply voltage	Vcc	15	V
Output voltage	Vout	24 (4pin)	V
Input voltage	Vin	±3	V
Power dissipation	Pd	300*	mW
Operating temperature range	Topr	-25~75	°C
Storage temperature range	Tstg	-55~125	°C

- Derating is done at $3\text{mW}/^\circ\text{C}$ for operation above $T_a=25^\circ\text{C}$.

Electrical Characteristics (Ta=25°C, Vcc=12V)

Parameter	Symbol	Min.	Typ.	Max.	Unit	Conditions	Test circuit
Quiescent current	I_Q	6.5	10.5	14.5	mA	—	Fig. 9
Power dissipation	P_D	78	126	174	mW	—	Fig. 9
Closed loop voltage gain	G_{VC}	26	32	38	dB	$R_g=50\Omega$, $R_L=1k\Omega$	Fig. 10
Input impedance	R_{IN}	—	3.8	—	k Ω	$f=10.7MHz$	Fig. 11

- ① I_0 is the supply current when S_2 is off and switch S_3 is on.
 - ② R is adjusted to fix $I_{0-1}=I_0$, with switch S_3 off and S_2 on.
 - ③ V_{01} is the output voltage when switch S_1 is on (i.e., when the output voltage is 0.1V).
 V_{02} is the output voltage when S_1 is off.

$$R_{IN} = \frac{V_{02} \cdot R_1}{V_{01} - V_{02}} \text{ } (\Omega)$$

Circuit Description

As shown in Fig. 12 the BA401 consists of a single-stage differential amplifier and bias circuit. One side of the differential amplifier is biased at $2V_{BE}$. The bias circuit provides a constant emitter current for the differential amplifier in addition to an open-collector type output circuit.

External Components

1. Input Coupling Capacitor (Pin 1)
This is an interstage coupling capacitor between IF amplifier stages.
2. Input Bias Resistor (Pins 1 and 2)
This resistor provides bias current to pin 1 and performs impedance matching.

3. Bias Capacitor (Pin 2)
This capacitor stabilizes the bias voltage.
4. Output Resistor (Pin 4)
This is the load resistor for the differential amplifier.
5. Output Coupling Capacitor (Pin 4)
This is the coupling capacitor for the output to the next stage.

Precautions for Use

Care should be taken to place external components as close as possible to the IC. Wide ground conductors should be used to ensure positive grounding.
