## 2K-bit TTL bipolar PROM

### DESCRIPTION

The 82LS135 is field programmable, which means that custom patterns are immediately available by following the Signetics Generic I fusing procedure. The standard devices are supplied with all outputs at logical Low. Outputs are programmed to a logic High level at any specified address by fusing the Ni-Cr link matrix.

The 82LS135 includes on-chip decoding and two Chip Enable inputs for ease of memory expansion, and features 3-State outputs for optimization of word expansion in bused organizations.

Ordering information can be found on the following page.

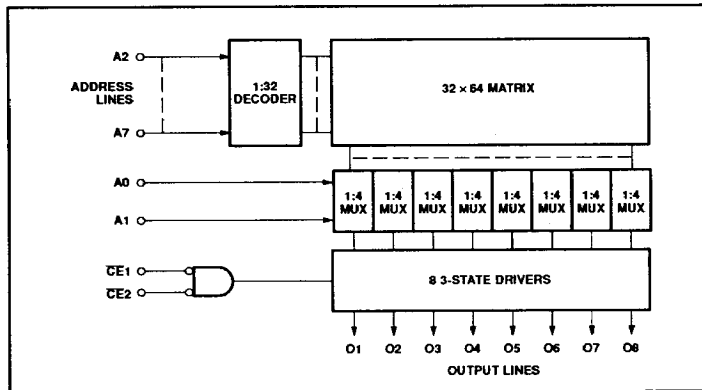

### FEATURES

- Address access time: 100ns max
- Power dissipation: 200 $\mu$ W/bit typ
- Input loading: -100 $\mu$ A max
- Two Chip Enable inputs
- On-chip address decoding
- No separate fusing pins
- Fully TTL compatible
- Unprogrammed outputs are Low level
- Outputs: 3-State

### APPLICATIONS

- Prototyping/volume production
- Sequential controllers
- Microprogramming
- Hardwired algorithms
- Control store
- Random logic
- Code conversion

**NOTES:**

1. Positive current is defined as into the terminal referenced.
2. All voltages with respect to network ground.
3. Typical values are at  $V_{CC} = 5\text{V}$ ,  $T_{amb} = +25^\circ\text{C}$ .
4. Duration of short circuit should not exceed 1 second.
5. Measured with all inputs grounded and all outputs open.
