■ TEST METHOD :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

① Measurement place

A place that is nothing of extreme light reflected in the room.

② External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less then 10 Lux at the module surface.

($E_e \leq 10\text{Lux}$)

③ Standard transmitter

A transmitter whose output is so adjusted as to $V_o=400\text{mVp-p}$ and the output Wave form shown in Fig.-1. According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However , the infrared photodiode to be used for the transmitter should be $\lambda_p=940\text{nm}, \Delta\lambda=50\text{nm}$. Also, photodiode is used of PD438B ($V_R=5\text{V}$).

(Standard light / Light source temperature 2856°K).

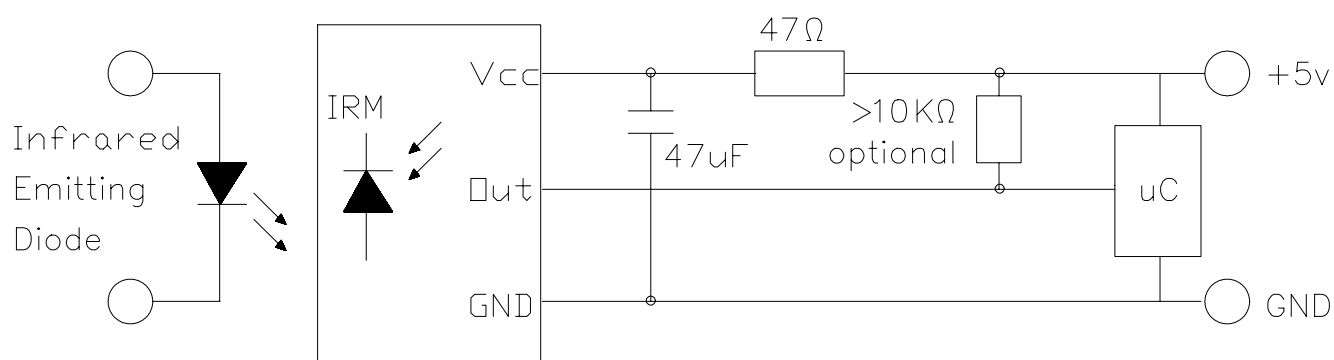

④ Measuring system

According to the measuring system shown in Fig.-3
