

## 14-Bit Registered Buffer

### Product Features

- Designed for low-voltage operation, 2.5V for PC1600~PC2700; 2.6V for PC3200
- Supports SSTL\_2 Class I output specifications
- SSTL\_2 Input and Output Levels
- Designed for DDR Memory
- Flow-Through Architecture
- Packaging Options (Lead-free packages are available):
  - 48-pin 240 mil wide plastic TSSOP (A)
  - 48-pin 173 mil wide plastic TSVSOP (K)

### Logic Block Diagram

### Product Pin Description

| Pin Name | Description             |
|----------|-------------------------|
| RESET    | Reset (Active Low)      |
| CLK      | Clock Input             |
| CLK      | Clock Input             |
| D        | Data Input              |
| Q        | Data Output             |
| GND      | Ground                  |
| VDD      | Core Supply Voltage     |
| VDDQ     | Output Supply Voltage   |
| VREF     | Input Reference Voltage |

### Truth Table<sup>(1)</sup>

| Inputs |        |        |   | Outputs                       |
|--------|--------|--------|---|-------------------------------|
| RESET  | CLK    | CLK    | D | Q                             |
| L      | X      | X      | X | L                             |
| H      | ↑      | ↓      | H | H                             |
| H      | ↑      | ↓      | L | L                             |
| H      | L or H | L or H | X | Q <sub>0</sub> <sup>(2)</sup> |

#### Notes:

1. H = High Signal Level  
L = Low Signal Level  
↑ = Transition LOW-to-HIGH  
↓ = Transition HIGH-to-LOW  
X = Irrelevant
2. Output level before the indicated steady state input conditions were established.

### Product Description

Pericom Semiconductor's PI74SSTVF16857A series of logic circuits are produced using the Company's advanced sub-micron CMOS technology, achieving industry leading speed.

The 14-bit PI74SSTVF16857A universal bus driver is designed for 2.5V to 2.6V VDD operation and SSTL\_2 I/O Levels except for the RESET input which is LVC MOS.

Data flow from D to Q is controlled by the differential clock, CLK, CLK and RESET. Data is triggered on the positive edge of CLK. CLK must be used to maintain noise margins.

RESET must be supported with LVC MOS levels as VREF may not be stable during power-up. RESET is asynchronous and is intended for power-up only and when low assures that all of the registers reset to the Low State. Q outputs are low, and all input receivers, data and clock, are switched off.

Pericom's PI74SSTVF16857A is characterized for operation from 0° to 70°C.

### Product Pin Configuration

|      |    |            |        |
|------|----|------------|--------|
| Q1   | 1  | 48         | D1     |
| Q2   | 2  | 47         | D2     |
| GND  | 3  | 46         | GND    |
| VDDQ | 4  | 45         | VDD    |
| Q3   | 5  | 44         | D3     |
| Q4   | 6  | 43         | D4     |
| Q5   | 7  | 42         | D5     |
| GND  | 8  | 41         | D6     |
| VDDQ | 9  | 40         | D7     |
| Q6   | 10 | 48-Pin A,K | 39 CLK |
| Q7   | 11 | 38         | CLK    |
| VDDQ | 12 | 37         | VDD    |
| GND  | 13 | 36         | GND    |
| Q8   | 14 | 35         | VREF   |
| Q9   | 15 | 34         | RESET  |
| VDDQ | 16 | 33         | D8     |
| GND  | 17 | 32         | D9     |
| Q10  | 18 | 31         | D10    |
| Q11  | 19 | 30         | D11    |
| Q12  | 20 | 29         | D12    |
| VDDQ | 21 | 28         | VDD    |
| GND  | 22 | 27         | GND    |
| Q13  | 23 | 26         | D13    |
| Q14  | 24 | 25         | D14    |

## Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested.)

| Parameter   | Symbol  | Ratings                        | Units |
|---|---|--------------------------------|-------|
| Storage Temperature                                     | T <sub>stg</sub>  | -65 to 150                     | °C    |
| Supply Voltage  | V <sub>DD</sub> or V <sub>DDQ</sub>                     | -0.5 to 3.6                    | V     |
| Input Voltage <sup>(1)</sup>                            | V <sub>I</sub>  | -0.5 to V <sub>DD</sub> + 0.5  |       |
| Output Voltage <sup>(1,2)</sup>                         | V <sub>O</sub>  | -0.5 to V <sub>DDQ</sub> + 0.5 |       |
| Input Clamp Current                                     | I <sub>I K</sub> , V <sub>I</sub> < 0                   | -50                            | mA    |
| Output Clamp Current                                    | I <sub>O K</sub> , V <sub>O</sub> < 0                   | ±50                            |       |
| Continuous Output Current                               | I <sub>O</sub> , V <sub>O</sub> = 0 to V <sub>DDQ</sub> | ±50                            |       |
| V <sub>DD</sub> , V <sub>DDQ</sub> , or GND current/pin | I <sub>DD</sub> , I <sub>DDQ</sub> or GND               | ±100                           |       |
| Package Thermal Impedance                               | A-Package   | Θ <sub>JA</sub>                | 70    |
|   | K-Package   |                                | 58    |
|   |   |                                | °C/W  |

### Notes:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

1. The input and output negative voltage ratings may be excluded if the input and output clamp ratings are observed.
2. This current will flow only when the output is in the high state level V<sub>O</sub> > V<sub>DDQ</sub>.
3. The package thermal impedance is calculated in accordance with JESD 51-7.

**Recommended Operating Conditions**

**Notes:**

8.  $C_L$  includes probe and jig capacitance.
9.  $I_{DD}$  tested with clock and data inputs held at  $V_{DD}$  or GND, and  $I_O = 0mA$ .
10. All input pulses are supplied by generators having the following characteristics:  
 $PRR \leq 10$  MHz,  $Z_0 = 50\Omega$ . Input slew rate =  $1V/ns \pm 20\%$  (unless otherwise specified).
11. The outputs are measured one at a time with one transition per measurement.
12.  $V_{TT} = V_{REF} = V_{DDQ}/2$
13.  $V_{IH} = V_{REF} + 310mV$  (ac voltage levels) for SSTL inputs.  $V_{IH} = V_{DD}$  for LVCMS input.
14.  $V_{IL} = V_{REF} - 310mV$  (ac voltage levels) for SSTL inputs.  $V_{IL} = GND$  for LVCMS input.
15.  $t_{PLH}$  and  $t_{PHL}$  are the same as  $t_{pd}$ .
