

STRUCTURE	Silicon Monolithic Integrated Circuit
PRODUCT SERIES	Low Voltage Detector IC with Adjustable Output Delay
TYPE	BU43XXF Series
FEATURES	- Detection voltage lineup : 0.9V~4.8V - High precision detection voltage : $\pm 1\%$

ABSOLUTE MAXIMUM RATINGS (Ta=25°C)

Parameter	Symbol	Limit	Unit
Supply Voltage ※1	V _{DD} —GND	-0.3 to +7	V
Output Voltage ※1 CMOS Output	V _{OUT}	GND-0.3 to V _{DD} +0.3	V
Input Voltage of CT	V _{CT}	GND-0.3 to V _{DD} +0.3	V
Power Dissipation ※2	P _d	400	mW
Operating Temperature ※1	T _{opr}	-40 to +125	°C
Storage Temperature Range	T _{stg}	-55 to +125	°C
Junction Temperature	T _{jmax}	125	°C

※1 Do not exceed P_d.

※2 Mounted on 70mm × 70mm × 1.6mm Glass Epoxy PCB, P_d derated at 4.0mW/°C for temperature above Ta=25°C

NOTE : The product described in this specification is a strategic product (and/or service) subject to COCOM regulations.

It should not be exported without authorization from the appropriate government.

NOTE : This product is not designed for protection against radioactive rays.

Status of this document

The Japanese version of this document is the formal specification.

If there are any differences in translation version of this document, formal version takes priority.

OELECTRICAL CHARACTERISTICS (Unless Otherwise Specified Ta=-25 to 125°C)

Parameter	Symbol	Condition	Limit			Unit
			Min.	Typ.	Max.	
Detection Voltage	VDET	VDD=H→L Ta=25°C	VDET(T) × 0.99	VDET(T)	VDET(T) × 1.01	V
Circuit Current when ON	IDD1	VDD=VDET-0.2V, VDET=0.9-1.3V	-	0.15	0.88	μA
		VDET=1.4-2.1V	-	0.20	1.05	
		VDET=2.2-2.7V	-	0.25	1.23	
		VDET=2.8-3.3V	-	0.30	1.40	
		VDET=3.4-4.2V	-	0.35	1.58	
		VDET=4.3-4.8V	-	0.40	1.75	
Circuit Current when OFF	IDD2	VDD=VDET+2.0V, VDET=0.9-1.3V	-	0.30	1.40	μA
		VDET=1.4-2.1V	-	0.35	1.58	
		VDET=2.2-2.7V	-	0.40	1.75	
		VDET=2.8-3.3V	-	0.45	1.93	
		VDET=3.4-4.2V	-	0.50	2.10	
		VDET=4.3-4.8V	-	0.55	2.28	
Operating Voltage Range	VOPL	VOL ≤ 0.4V Ta=25°C ~ 125°C	0.70	-	-	V
		VOL ≤ 0.4V Ta=-25°C ~ 25°C	0.90	-	-	
'Low' Output Current (Nch)	IOL	VDS=0.05V, VDD=0.85V	20	100	-	μA
		VDS=0.5V, VDD=1.5V, VDET=1.7-4.8V	1.0	3.3	-	mA
		VDS=0.5V, VDD=2.4V, VDET=2.7-4.8V	3.6	6.5	-	
'High' Output Current (Pch)	IOH	VDS=0.5V VDD=4.8V, VDET=0.9-3.9V	1.7	3.4	-	mA
		VDS=0.5V VDD=6.0V, VDET=4.0-4.8V	2.0	4.0	-	
CT pin Threshold Voltage	VCTH	VDD=VDET × 1.1 Ta=25°C VDET=0.9V-2.5V	VDD × 0.35	VDD × 0.45	VDD × 0.55	V
		VDD=VDET × 1.1 Ta=25°C VDET=2.6V-4.8V	VDD × 0.40	VDD × 0.50	VDD × 0.60	
Output Delay Resistance	RCT	VDD=VDET × 1.1 VCT=0.5V Ta=25°C	9.0	10.0	11.0	MΩ
CT pin Output Current	ICT	VCT=0.1V VDD=0.85V	5	40	-	μA
		VCT=0.5V VDD=1.5V VDET=1.7V-4.8V	200	400	-	
Detection Voltage Temperature coefficient	VDET/ΔT	Ta=-40°C ~ 125°C (Designed Guarantee)	-	±30	-	ppm/°C
Hysteresis Voltage	ΔVDET	VDD=L→H→L Ta=-40°C ~ 125°C	VDET ≤ 1.0V	VDET × 0.03	VDET × 0.05	V
			VDET ≥ 1.1V	VDET × 0.03	VDET × 0.05	

VDET(T) : Standard Detection Voltage (0.9V to 4.8V, 0.1V step)
Designed Guarantee. (Outgoing inspection is not done on all products.)

ONOTES FOR USE

1 . Absolute maximum range

Absolute Maximum Ratings are those values beyond which the life of a device may be destroyed. We cannot be defined the failure mode, such as short mode or open mode. Therefore a physical security countermeasure, like fuse, is to be given when a specific mode to be beyond absolute maximum ratings is considered.

2 . GND potential

GND terminal should be a lowest voltage potential every state.

Please make sure all pins which are over ground even if include transient feature.

3 . Electrical Characteristics

Be sure to check the electrical characteristics, that is one the tentative specification will be changed by temperature, supply voltage, and external circuit.

4 . Bypass Capacitor for Noise Rejection

Please put into the to reject noise between VDD pin and GND. If extremely big capacitor is used, transient response might be late. Please confirm sufficiently for the point.

5 . Short Circuit between Terminal and Soldering

Don't short-circuit between Output pin and VDD pin, Output pin and GND pin, or VDD pin and GND pin. When soldering the IC on circuit board, please be unusually cautious about the orientation and the position of the IC. When the orientation is mistaken the IC may be destroyed.

6 . Electromagnetic Field

Mal-function may happen when the device is used in the strong electromagnetic field.

7 . The VDD line impedance might cause oscillation because of the detection current.

8 . A VDD -GND capacitor (as close connection as possible) should be used in high VDD line impedance condition.

9 . Case of needless Delay time, recommended to insert more 470kΩ resistor between VDD and CT.

10 . BU43XXF has extremely high impedance terminals. Small leak current due to the uncleanness of PCB surface might cause unexpected operations. Application values in these conditions should be selected carefully. If 10MΩ leakage is assumed between the CT terminal and the GND terminal, 1MΩ connection between the CT terminal and the VDD terminal would be recommended.

The value of RCT depends on the external resistor that is connected to CT terminal, so please consider the delay time that is decided by $\tau \times RCT \times CCT$ changes.

11. Delay time (tPLH)

$$tPLH = \tau \times RCT \times CCT \text{ (sec)}$$

τ : time constant

RCT : 10MΩ (typ.) (built-in resistor)

CCT : capacitor connected CT pin.

Recommended value of CCT capacitor TS over 100pF.

The reference value

$$(\tau \times RCT) \times 10^6$$

VDET = 0.9 to 2.5V

Ta = 25°C (min. = 5.1×10^6 typ. = 6.0×10^6 max = 6.9×10^6)

Ta = -25 to 125°C (min. = 3.3×10^6 typ. = 6.0×10^6 max = 8.7×10^6)

VDET = 2.6 to 4.8V

Ta = 25°C (min. = 5.9×10^6 typ. = 6.9×10^6 max = 7.9×10^6)

Ta = -25 to 125°C (min. = 3.8×10^6 typ. = 6.9×10^6 max = 10.0×10^6)

12. External parameters

The recommended parameter range for CT is 10pF~0.1 μF. When attempting to operate beyond these parameters, be sure to verify the actual operation before continuing use.

13. CT pin discharge

Due to the capabilities of the CT pin discharge transistor, the CT pin may not completely discharge when a short input pulse is applied, and in this case the delay time may not be controlled. Please verify the actual operation.

14. Power on reset operation

Please note that the power on reset output varies with the Vcc rise up time.

Please verify the actual operation.

Notes

- No technical content pages of this document may be reproduced in any form or transmitted by any means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the product described in this document are for reference only. Upon actual use, therefore, please request that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard use and operation. Please pay careful attention to the peripheral conditions when designing circuits and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or otherwise dispose of the same, no express or implied right or license to practice or commercially exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of which would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
