- Separating Vcc into Pre-power of sled motor, Power of loading motor and Power of actuator, can make better power efficiency, by low supply voltage drive.
- Stand-by mode built in.
- Thermal shutdown circuit on chip.

Description

The CMD5954 is a 4-channel BTL driver IC for driving the motors and actuators in products such as CD-ROM/DVD-ROM/DVD-Player drives. Two of the channels use current feedback to minimize the current phase shift caused by the influence of load inductance.

Applications

CD-ROM drives, DVD drives, DVD-ROM drives.

Operation notes

- (1) Thermal-shut-down circuit built in. In case IC chip temperature rise to 175 °C (typ.), thermal-shut-down circuit operates and output current muted. Next time IC chip temperature falls below 150 °C (typ.), the driver blocks start.
- (2) In case stand-by-pin voltage under 0.5V or opened, quiescent current is muted. stand-by-pin voltage should be over 2.0V for normal application.
- (3) Bias-pin (pin 27) should be pulled up more than 1.2V. In case bias-pin voltage is pulled down under 0.9V (typ.), output current is muted.
- (4) Insert the by-pass capacitor between Vcc-pin and GND-pin of IC as possible as near

(approximately 0.1 μ F).

- (5) Heat dissipation fins are attached to the GND on the inside of the package. Make sure to connect these to the external GND.
