**CURRENT MODE  
REGULATING  
PULSE WIDTH  
MODULATORS**

**FEATURES**

- Guaranteed  $\pm 1\%$  reference voltage tolerance
- Accurate oscillator discharge current
- Guaranteed  $\pm 10\%$  frequency tolerance
- Low start-up current ( $< 500 \mu A$ )
- Under voltage lockout with hysteresis
- Output state completely defined for all supply and input conditions
- Interchangeable with IP and UC1844/5 series for improved operation
- 500kHz Oscillator operation  
250kHz Output operation

**Order Information**

Part Number	J-Pack 8 Pin	N-Pack 8 Pin	D-8 8 Pin	D-14 14 Pin	Temp. Range	Note:
IP1844A	✓				-55 to +125°C	To order, add the package identifier to the part number.
IP2844A	✓	✓	✓	✓	-25 to +85°C	
IP3844A	✓	✓	✓	✓	0 to +70°C	
IP1845A	✓				-55 to +125°C	eg. IP1844AD-14 IP3845AJ
IP2845A	✓	✓	✓	✓	-25 to +85°C	
IP3845A	✓	✓	✓	✓	0 to +70°C	

**ABSOLUTE MAXIMUM RATINGS** ( $T_{case} = 25^\circ C$  unless otherwise stated)

$V_{CC}$	Supply Voltage	(low impedance source) ( $I_{CC} < 30mA$ )		+30V Self limiting
$I_O$	Output Current			$\pm 1A$
	Output Energy	(capacitive load)		5 $\mu J$
	Analog Inputs	(pins 2 and 3)		-0.3V to $+V_{CC}$
	Error Amp Output Sink Current			10mA
$P_D$	Power Dissipation	$T_{amb} = 25^\circ C$	J, N Packages	1W
	Derate @ $T_{amb} > 50^\circ C$			10mW/ $^\circ C$
$P_D$	Power Dissipation	$T_{case} = 25^\circ C$	D Package	725mW
	Derate @ $T_{amb} > 50^\circ C$			7.25mW/ $^\circ C$
$P_D$	Power Dissipation	$T_{case} = 25^\circ C$	J, N Packages	2W
	Derate @ $T_{case} > 25^\circ C$			16mW/ $^\circ C$
$T_{STG}$	Storage Temperature Range			-65 to 150°C
$T_L$	Lead Temperature	(soldering, 10 seconds)		+300°C

**DESCRIPTION**

The IP1844A/IP1845A series of switching regulator control circuits contain all the functions necessary to implement off-line, current mode switching regulators, using a minimum number of external parts. Functions included are voltage reference, error amplifier, current sense comparator, oscillator, totem-pole output driver and under-voltage lockout circuitry.

In addition the IP1844A and IP1845A series of devices have a toggle flip-flop which blanks the output on every second clock pulse, thereby ensuring that the duty cycle never exceeds 50%. For applications requiring more flexible control, all devices feature an on-chip trimmed oscillator discharge current, allowing accurate control to maximum-duty-cycle by selection of timing components. This can be beneficial even when using the IP1844A or IP1845A series, as it allows optimum safety margins to be designed into the application.

Although pin compatible with the standard IP1844/5 parts these devices offer improved performance in several areas. They also offer tighter specification and improved performance over the IP and UC1844/5 series, whilst retaining complete compatibility.

**BLOCK DIAGRAM**

**RECOMMENDED OPERATING CONDITIONS**

$V_{CC}$	Supply Voltage <sup>1</sup>	$\leq 30V$
$I_O$	Output Current	0 to $\pm 200mA$
	Analog Inputs (pins 2 and 3)	-0.3V to 3V
	Error Amp Output Sink Current	0 to 2mA
	Operating Ambient Temperature Range	IP1844A , IP1845A IP2844A , IP2845A IP3844A , IP3845A
		-55 to 125°C -25 to 85°C 0 to 70°C

**Notes:**

1. Lower limit set by under voltage lockout specification.

**ELECTRICAL CHARACTERISTICS** (Over Full Operating Temperature Range unless otherwise stated)

**NOTES**

1. Test Conditions unless otherwise stated:  
V<sub>CC</sub> = 15V\*, R<sub>T</sub> = 10kΩ, C<sub>T</sub> = 3.3nF, f = 52kHz.  
\*Adjust V<sub>CC</sub> above start threshold before setting at required level.
2. Parameter measured at trip point of latch with  
V<sub>PIN2</sub> = 0V
3. Gain defined as:

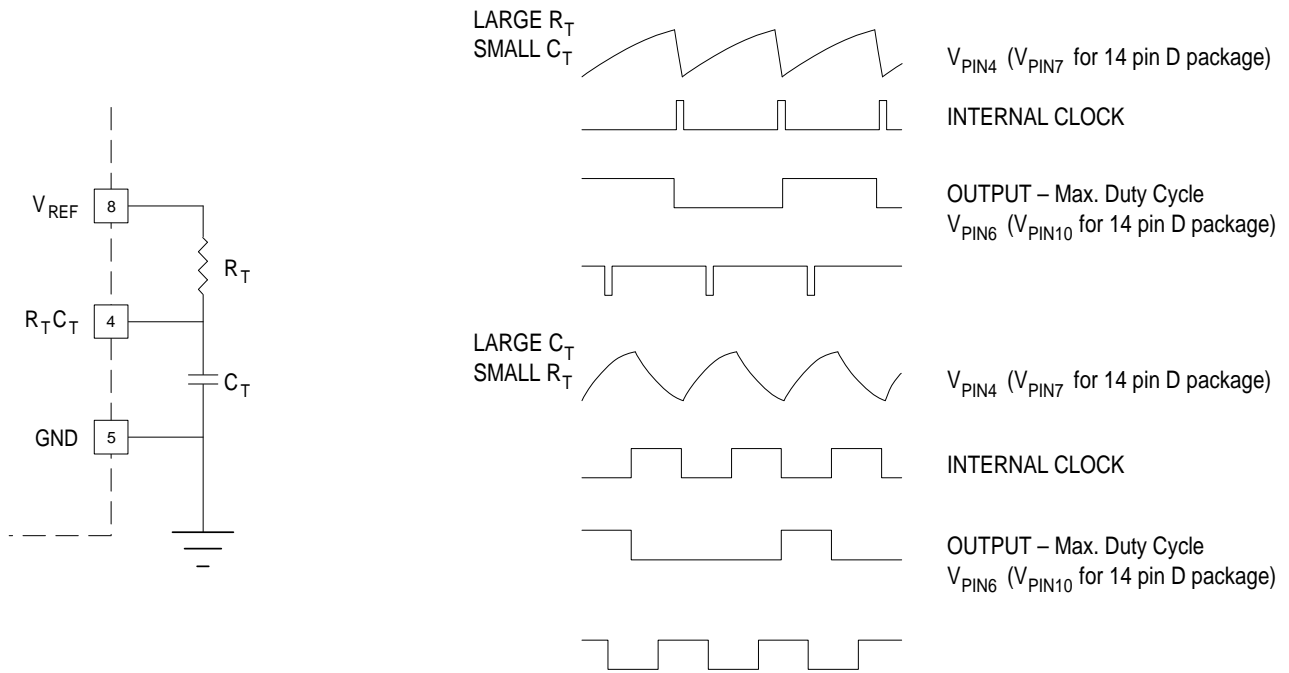

$$A = \frac{\Delta V_{PIN1}}{\Delta V_{PIN3}}$$

$$0 \leq V_{PIN3} \leq 0.8$$

All specifications apply over the full operating temperature range unless otherwise stated.  
(See Ordering Information for further details).

**APPLICATIONS INFORMATION**

**Oscillator Waveforms and Maximum Duty Cycle**

Oscillator timing capacitor  $C_T$  is charged by  $V_{REF}$  through  $R_T$  and discharged by an internal current source. During the discharge time, the internal clock signal blanks the output to the low state. Selection of  $R_T$  and  $C_T$  therefore determines both oscillator frequency and maximum duty cycle. Charge and discharge times are determined by the formulae:

$$t_c \approx 0.55 R_T C_T$$

$$t_d \approx R_T C_T \ln \left( \frac{.0063 R_T - 2.3}{.0063 - 4} \right)$$

$$\text{Resultant frequency } f = \frac{1}{(t_c + t_d)}$$

For  $R_T > 5k\Omega$ ,  
Resultant frequency  $f \approx \frac{1.8}{(R_T C_T)}$

**Open-Loop Laboratory Test Fixture**

High peak current associated with capacitive loads necessitate careful grounding techniques. Timing and bypass capacitors should be connected close to pin 5 in a single point ground. The transistor and 5K potentiometer are used to sample the oscillator waveform and apply an adjustable ramp to pin 3.

**TYPICAL PERFORMANCE CHARACTERISTICS**
