## TDA4661

## FEATURES

- Two comb filters, using the switched-capacitor technique, for one line delay time (64  $\mu$ s)
- Adjustment-free application
- No crosstalk between SECAM colour carriers (diaphoty)
- Handles negative or positive colour-difference input signals
- Clamping of AC-coupled input signals ( $\pm(R-Y)$  and  $\pm(B-Y)$ )
- VCO without external components
- 3 MHz internal clock signal derived from a 6 MHz CCO, line-locked by the sandcastle pulse (64  $\mu$ s line)
- Sample-and-hold circuits and low-pass filters to suppress the 3 MHz clock signal
- Addition of delayed and non-delayed output signals
- Output buffer amplifiers
- Comb filtering functions for NTSC colour-difference signals to suppress cross-colour.

## GENERAL DESCRIPTION

The TDA4661 is an integrated baseband delay line circuit with one line delay. It is suitable for decoders with colour-difference signal outputs  $\pm(R-Y)$  and  $\pm(B-Y)$ .
