

DS7837/DS8837 Hex Unified Bus Receiver

General Description

The DS7837/DS8837 are high speed receivers designed for use in bus organized data transmission systems interconnected by terminated 120Ω impedance lines. The external termination is intended to be 180Ω resistor from the bus to the +5V logic supply together with a 390Ω resistor from the bus to ground. The receiver design employs a built-in input hysteresis providing substantial noise immunity. Low input current allows up to 27 driver/receiver pairs to utilize a common bus. Disable inputs provide time discrimination. Disable inputs and receiver outputs are TTL compatible. Performance is optimized for systems with bus rise and fall times $\leq 1.0 \mu\text{s/V}$.

Features

- Low receiver input current for normal V_{CC} or $V_{CC} = 0V$ (15 μA typ)
- Six separate receivers per package
- Built-in receiver input hysteresis (1V typ)
- High receiver noise immunity (2V typ)
- Temperature insensitive receiver input thresholds track bus logic levels
- TTL compatible disable and output
- Molded or cavity dual-in-line or flat package
- High speed

Note 1: "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. Except for "Operating Temperature Range" they are not meant to imply that the devices should be operated at these limits. The table of "Electrical Characteristics" provides conditions for actual device operation.

Note 2: Unless otherwise specified min/max limits apply across the -55°C to $+125^\circ\text{C}$ temperature range for the DS7837 and across the 0°C to $+70^\circ\text{C}$ range for the DS8837. All typical values are for $T_A = 25^\circ\text{C}$ and $V_{CC} = 5\text{V}$.

Note 3: All currents into device pins shown as positive, out of device pins as negative, all voltages referenced to ground unless otherwise noted. All values shown as max or min on absolute value basis.

Note 4: Only one output at a time should be shorted.

Note 5: Fan-out of 10 load, $C_{LOAD} = 15\text{ pF}$ total. Measured from $V_{IN} = 1.3\text{V}$ to $V_{OUT} = 1.5\text{V}$, $V_{IN} = 0\text{V}$ to 3V pulse.
