	DTMF Tone Generator for Pushbutton Telephone	

The LC7365N, 7366N are DTMF tone generator LSIs for use in pushbutton telephones. The LC7365N contains a keyboard scan circuit and the LC7366N can direct accept the output from a microcomputer.

Features

- Low voltage CMOS process for direct operation from telephone line
- The LC7365N can interface directly to a single contact or standard 2-of-7, 2-of-8 key pad.
- The LC7366N has an input configuration that facilitates interface to a microcomputer. (Positive logic input)
- Uses TV crystal standard ($f_{osc} = 3.58\text{MHz}$) to derive all frequencies.
- On-chip feedback resistor and capacitors to form the OSC circuit
- Wide operating voltage range : 2.5 to 10.0V
- On-chip generation of a reference voltage to assure amplitude stability of the dual tones over the operating voltage and temperature range
- Low output tone distortion (7% max) over the whole supply voltage range ($V_{DD} = 2.5$ to 10.0V)
- On-chip MUTE output and XMIT output
- Current dissipation at operating mode : $I_{DD} = 3\text{mA max}/V_{DD} = 2.5\text{V}$, $16\text{mA max}/V_{DD} = 10\text{V}$
- Current dissipation at standby mode : $I_{DD} = 0.3\mu\text{A typ}/V_{DD} = 2.5\text{V}$, $1\mu\text{A typ}/V_{DD} = 10\text{V}$

Pin Description

↓ Applicable to both Type Nos. when no Type No. is indicated.

Pin Name	Pin No.	Input/Output Configuration	Function
V _{DD}	1		Power supply pin V _{DD} =2.5 to 10.0V
V _{SS}	6		
OSCO	8		Reference frequency generation pin Uses a crystal resonator of 3.579545MHz. With the feedback resistor and capacitors contained to form the OSC circuit, a crystal resonator is simply connected across the pins.
OSCI	7		
LC7365N R1 to R4 C1 to C4	14 to 11 3 to 5 9		Row and column input pin High-active input Contains a P-channel transistor for keyboard scan and an N-channel transistor for pull-down.
LC7366N R1 to R4 C1 to C4	14 to 11 3 to 5 9		Row and column input pin High-active input
MUTE	10		'L' level with no key input 'H' level with key input CMOS complementary output
XMIT	2		'H' level with no key input High impedance with key input P-channel open drain output
CD	15		Chip disable pin When set to 'H' level, the row input/column input are brought to high impedance state, OSC stops, tone output becomes 'V _{SS} ' level, MUTE output becomes 'L' level, and XMIT output becomes 'H' level.
TONE	16		DTMF signal output pin npn transistor-used emitter-follower output

How to Output a Single Tone

Select a row (or column) input according to your desired tone output frequency (set to '1' level) and two or more column (or row) inputs in that row (or column).

When two or more row (or column) inputs are selected, output of that row (or column) tone is inhibited.

It should be noted that when all of four inputs in any row are set to '1' level a signal 16 times the corresponding column tone is output at the MUTE pin.
