

# LC86P6449

## 8-Bit Single Chip Microcontroller with One-Time Programmable PROM

### Preliminary

#### Overview

The LC86P6449 is a CMOS 8-bit single chip microcontroller with one-time PROM for the LC866400 series. This microcontroller has the function and the pin description of the LC866400 series mask ROM version, and 48K-byte PROM.

#### Features

- (1) Option switching by PROM data

The option function of the LC866400 series can be specified by the PROM data.

LC86P6449 can be checked the function of the trial pieces using the mass production board.

- (2) Internal one-time PROM capacity : 49408 bytes  
 (3) Internal RAM capacity : 1152 bytes

Used PROM or RAM capacity are equal ROM or RAM capacity of mask ROM version which applies LC86P6449.

Mask ROM version	PROM capacity	RAM capacity
LC866448	49152 bytes	1152 bytes
LC866444	45056 bytes	1152 bytes
LC866440	40960 bytes	1152 bytes
LC866436	36864 bytes	1152 bytes
LC866432	32768 bytes	768 bytes
LC866428	28672 bytes	768 bytes
LC866424	24576 bytes	768 bytes
LC866420	20480 bytes	640 bytes
LC866416	16384 bytes	640 bytes
LC866412	12288 bytes	512 bytes
LC866408	8192 bytes	512 bytes

#### Programming service

We offers various services at nominal charges. These include the ROM writing, the ROM reading, the package stamping and the screening. Contact our representative for further information

- Any and all SANYO products described or contained herein do not have specifications that can handle applications that require extremely high levels of reliability, such as life-support systems, aircraft's control systems, or other applications whose failure can be reasonably expected to result in serious physical and/or material damage. Consult with your SANYO representative nearest you before using any SANYO products described or contained herein in such applications.
- SANYO assumes no responsibility for equipment failures that result from using products at values that exceed, even momentarily, rated values (such as maximum ratings, operating condition ranges, or other parameters) listed in products specifications of any and all SANYO products described or contained herein.

## LC86P6449

- (4) Operating supply voltage : 4.5V to 6.0V  
 (5) Instruction cycle time : 1.0μs to 366μs  
 (6) Operating temperature : -30°C to +70°C  
 (7) The pin and the package compatible with the LC866400 series mask ROM devices  
 (8) Applicable mask ROM version : LC866448/LC866444/LC866440/LC866436//LC866432/LC866428  
 /LC866424/LC866420/LC866416/LC866412/LC866408

### Notice for use

LC86P6449 is provided for the first release and small shipping of the LC866400 series.  
 At using, take notice of the followings.

- (1) A point of difference LC86P6449 and LC866400 series

Item	LC86P6449	LC866448/44/40/36/32/28/24/20/16/12/08
Operation after reset releasing	The option is specified until 3ms after going to a 'H' level to the reset terminal by dgrees. The program is executed from 00H of the program counter.	The program is executed from 00H of the program counter immediately after going to a 'H' level to reset terminal.
Pull-down resistor of the following pins •S0/T0 – S6/T6 •S7/T7 – S15/T15 •S16 – S27 •S28 – S37	Pull-down resistor provided/not provided Not provided Provided (fixed) Provided (fixed) Not provided	Pull-down resistor provided/not provided Specified by the option Provided (fixed) Specified by the option Specified by the option
Operating supply Voltage range (VDD)	4.5V to 6.0V	2.5V to 6.0V
“L” level hold Tr. of the high voltage withstand input terminal	Refer to 'electrical characteristics' on the semiconductor news.	
Power dissipation		

LC86P6449 uses 256 bytes that is addressed on FF00H to FFFFH in the program memory as the option configuration data area. This option configuration cannot execute all options which LC866400 series have. Next tables show the options that correspond and not correspond to LC86P6449.

- A kind of the option corresponding of the LC86P6449

A kind of option	Pins, Circuits	Contents of the option
Input/output form of Input/output ports	Port 0	1. N-channel open drain output 2. CMOS output *1
		1. Pull-up MOS Tr. provided 2. Pull-up MOS Tr. not provided *2
	Port 1  *1	1. Input : Programmable pull-up MOS Tr. Output : N-channel open drain 2. Input : Programmable pull-up MOS Tr. Output : CMOS
		Port 3  *1
Pull-up MOS Tr. of input ports	Port 7  *1	1. No Pull-up MOS Tr. 2. Pull-up MOS Tr.

\*1) Specified in a bit

\*2) Specified in nibble unit. The port of N-channel open drain output does not have the Pull-up MOS Tr..

## LC86P6449

- A kind of the option not corresponding of the LC86P6449

A kind of option	Pins, Circuits	LC86P6449	LC866448/44/40/36/32/28/24/20/16/12/08
Pull-down resistor of the high voltage	•S0/T0 to S6/T6	Not provided	Specified by the option
Withstand output terminals	•S16 to S27	Provided (fixed)	Specified by the option
	•S28 to S37	Not provided	Specified by the option

### (2) Option

The option data is created by the option specified program "SU86K.EXE". The created option data is linked to the program area by linkage loader "L86K.EXE".

### (3) ROM space

LC86P6449 and LC866400 series use 256 bytes that is addressed on 0FFF0H to 0FFFFH in the program memory as the option specified data area. These program memory capacity are 61440 bytes that is addressed on 0000H to BFFFH.

(4) Ordering information

1. When ordering the identical mask ROM and PROM devices simultaneously.  
Provide an EPROM containing the target memory contents together with the separate order forms for each of the mask ROM and PROM versions.
2. When ordering a PROM device.  
Provide an EPROM containing the target memory contents together with an order form.

**How to use**

(1) Specification of option

Programming data for PROM of the LC86P6449 is required.  
Debugged evaluation file (EVA file) must be converted to an INTEL-HEX formatted file (HEX file) with file converter program, EVA2HEX.EXE. The HEX file is used as the programming data for the LC86P6449.

(2) How to program for the PROM

LC86P6449 can be programmed by the EPROM programmer with attachment ; W86EP6448Q.

- Recommended EPROM programmer

Productor	EPROM programmer
Advantest	R4945, R4944, R4943
Andou	AF-9704
AVAL	PKW-1100, PKW-3000
Minato electronics	MODEL 1890A

- “27512 (Vpp=12.5V) Intel high speed programming” mode available. The address must be set to “0 to 0FFFFH” and a jumper (DASEC) must be set to ‘OFF’ at programming.

(3) How to use the data security function

“Data security” is the disabled function to read the data of the PROM.

The following is the process in order to execute the data security.

1. Set ‘ON’ the jumper of attachment.
2. Program again. Then EPROM programmer displays the error. The error means normally activity of the data security. It is not a trouble of the EPROM programmer or the LSI.

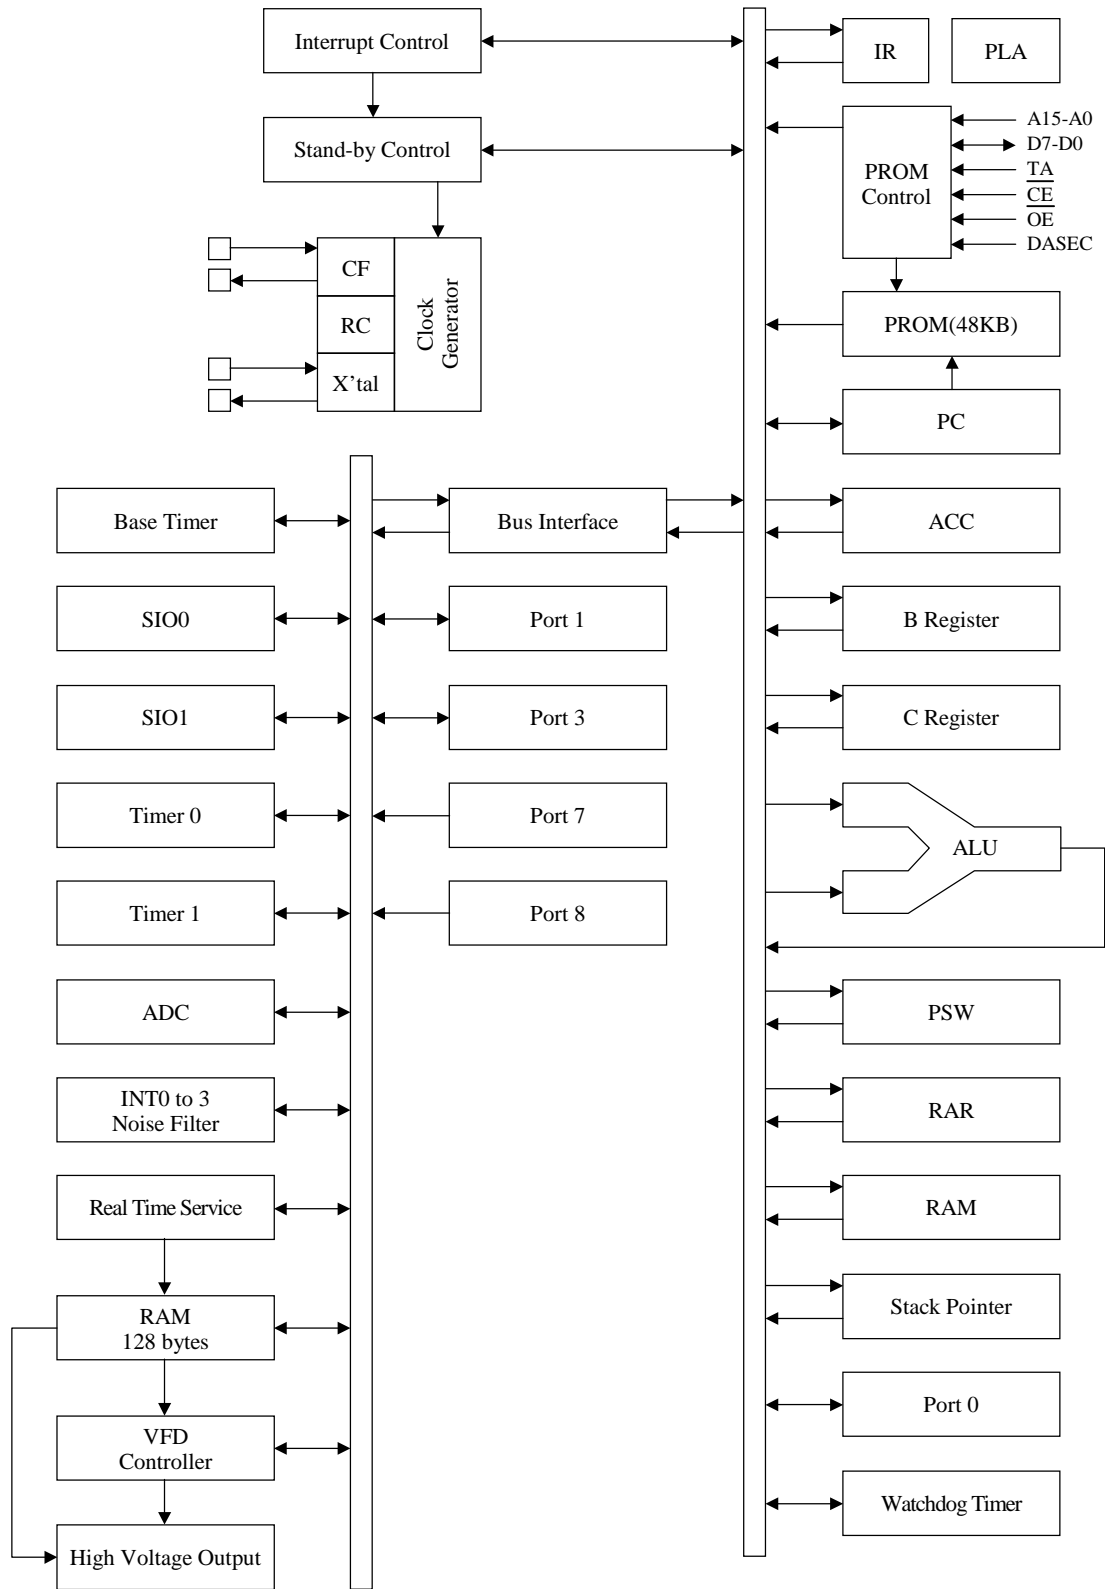

Notes

- Data security is not executed when the data of all address have ‘FFH’ at the sequence 2 above.
- The programming by a sequential operation “BLANK⇒PROGRAM⇒VERIFY” cannot be executed data security at the sequence 2 above.
- Set to ‘OFF’ the jumper after executing the data security.

◆ All of port options except the pull-up resistor option of port 0 can be specified in a bit unit.

- \*1 Memory select input for data security
- \*2 Output enable input
- \*3 Chip enable input
- \*4 Connect like the following figure to reduce noise into a VDD1 terminal.
- \*5 TA → PROM control signal input
- \*6 S0/T0 to S6/T6 : not provided the pull-down resistor
- \*7 S7/T7 to S15/T15 : provided the pull-down resistor (fixed)
- \*8 S16 to S27 : provided the pull-down resistor (fixed)
- \*9 S28 to S31 : not provided the pull-down resistor
- \*10 S32 to S37 : not provided the pull-down resistor

### [Notes]

When connecting to the power supply, the power pins must be connected like following figure.

Pin capacitance	CP	All pins	•f=1MHz •VIN=VSS for all unmeasured terminals. •Ta=25°C	4.5 to 6.0		10		pF

4. Serial Input/output Characteristics at Ta=-30°C to +70°C, VSS1=VSS2=0V

Parameter		Symbol	Pins	Conditions	Ratings			unit		
					VDD[V]	min.	typ.		max.	
Serial clock	Input clock	Cycle	tCKCY(1)	SCK0,SCK1	Refer to figure 5	4.5 to 6.0	2			tCYC
		Low Level pulse width	tCKL(1)				1			
		High Level pulse width	tCKH(1)				1			
	Output clock	Cycle	tCKCY(2)	SCK0,SCK1	•Use pull-up resistor (1kΩ) in the open drain output. •Refer to figure 5	4.5 to 6.0	2			
		Low Level pulse width	tCKL(2)					1/2tCKCY		
		High Level pulse width	tCKH(2)					1/2tCKCY		
Serial input	Data set-up time	tICK	•SI0,SI1 •SB0,SB1	•Data set-up to SCK0,1 •Data hold from SCK0,1 •Refer to figure 5	4.5 to 6.0	0.1			μs	
	Data hold time	tCKI				0.1				
Serial output	Output delay time (External clock using for serial transfer clock)	tCKO(1)	•SO0,SO1 •SB0,SB1	•Use pull-up resistor (1kΩ) in the open drain output. •Data hold from SCK0,1 •Refer to figure 5	4.5 to 6.0			7/12 tCYC +0.2		
	Output delay time (Internal clock using for serial transfer clock)	tCKO(2)						1/3 tCYC +0.2		

5. Pulse Input Conditions at Ta=-30°C to +70°C, VSS1=VSS2=0V

Parameter	Symbol	Pins	Conditions	Ratings			unit
				VDD[V]	min.	typ.	
High/low level pulse width	tPIH(1) tPIL(1)	•INT0, INT1 •INT2/T0IN	•Interrupt acceptable •Timer0-countable	4.5 to 6.0	1		tCYC
	tPIH(2) tPIL(2)	INT3/T0IN (The noise rejection clock selected to 1/1.)	•Interrupt acceptable •Timer0-countable	4.5 to 6.0	2		
	tPIH(3) tPIL(3)	INT3/T0IN (The noise rejection clock selected to 1/16.)	•Interrupt acceptable •Timer0-countable	4.5 to 6.0	32		
	tPIH(4) tPIL(4)	INT3/T0IN (The noise rejection clock selected to 1/64.)	•Interrupt acceptable •Timer0-countable	4.5 to 6.0	128		
	tPIL(5)	$\overline{\text{RES}}$	Reset acceptable	4.5 to 6.0	200		μs

6. AD Converter Characteristics at Ta=-30°C to +70°C, VSS1=VSS2=0V

Parameter	Symbol	Pins	Conditions	Ratings			unit
				VDD[V]	min.	typ.	
Resolution	N			4.5 to 6.0		8	bit
Absolute precision (Note 2)	ET			4.5 to 6.0			±1.5 LSB
Conversion time	tCAD		AD conversion time = 16 × tCYC (ADCR2=0) (Note 3)	4.5 to 6.0	15.68 (tCYC= 0.98μs)	65.28 (tCYC= 4.08μs)	μs
			AD conversion time = 32 × tCYC (ADCR2=1) (Note 3)		31.36 (tCYC= 0.98μs)	130.56 (tCYC= 4.08μs)	
Analog input voltage range	VAIN	AN0 to AN7		4.5 to 6.0	VSS	VDD	V
Analog port input current	IAINH		VAIN=VDD	4.5 to 6.0		1	μA
	IAINL		VAIN=VSS	4.5 to 6.0	-1		

(Note 2) Absolute precision excepts the quantizing error (±1/2 LSB).

(Note 3) The conversion time means the time from executing the AD conversion instruction to setting the complete digital conversion value to the register.

Current dissipation in HOLD mode (Note 4)	IDDHOLD(1)		HOLD mode	4.5 to 6.0		0.05	30	

(Note 4) The currents of the output transistors and the pull-up MOS transistors are ignored.

Table 1. Ceramic resonator oscillation recommended constant (main-clock)

Oscillation type	Maker	Oscillator	C1	C2
6MHz ceramic resonator oscillation	Murata			
			on chip	
3MHz ceramic resonator oscillation	Murata			
			on chip	
	Kyocera			

\* Both C1 and C2 must be use K rank ( $\pm 10\%$ ) and SL characteristics.

Table 2. Crystal oscillation guaranteed constant (sub-clock)

Oscillation type	Maker	Oscillator	C3	C4	Rd
32.768kHz crystal oscillation					

\* Both C3 and C4 must be use J rank ( $\pm 5\%$ ) and CH characteristics.  
(Not in need of high precision, use K rank ( $\pm 10\%$ ) and SL characteristics.)

- (Notes)
- Please place the oscillation-related parts as close to the oscillation pins as possible with the shortest possible pattern length since the circuit pattern affects the oscillation frequency.
  - If you use other oscillators herein, we provide no guarantee for the characteristics.

Figure 1 Main-clock circuit  
Ceramic resonator oscillation

Figure 2 Sub-clock circuit  
Crystal oscillation

Figure 3 Oscillation stable time

(Note) Fix the value of CRES, RRES that is sure to reset until 200 $\mu$ s, after Power supply has been over inferior limit of supply voltage.

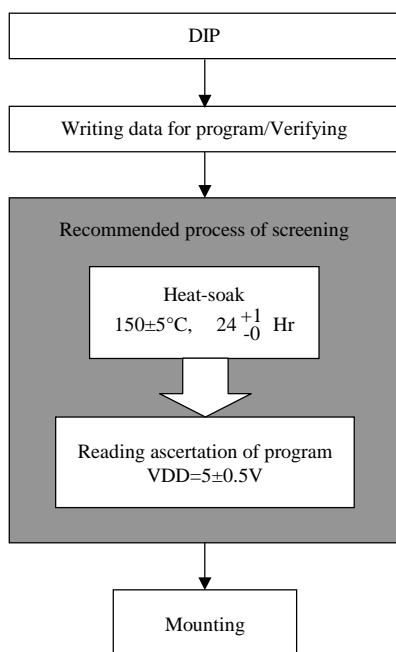

Figure 6 Pulse input timing condition

## Notice for use

- The construction of the one-time programmable microcomputer with a blank built-in PROM makes it impossible for Sanyo to completely factory-test it before shipping. To probe reliability of the programmed devices, the screening procedure shown in the following figure should always be followed.
- It is not possible to perform a writing test on the blank PROM. 100% yield, therefore, cannot be guaranteed.
- Keeping the dry packing  
The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less.
- After opening the packing  
The preparation procedures shown in the following figure should always be followed prior to mounting the packages on the substrate. After opening the packing, a controlled environment must be maintained until soldering. The environment must be held at a temperature of 30°C or less and a humidity level of 70% or less. Please solder within 96 hours. Unused devices should be kept in the dry atmosphere such as inside of desiccator or dry these up before assembling on the board.

a. Shipping with a blank PROM  
(Programming the data by yourself)

b. Shipping with a programmed PROM  
(Programming the data by Sanyo)

memo:

- Specifications of any and all SANYO products described or contained herein stipulate the performance, characteristics, and functions of the described products in the independent state, and are not guarantees of the performance, characteristics, and functions of the described products as mounted in the customer's products or equipment. To verify symptoms and states that cannot be evaluated in an independent device, the customer should always evaluate and test devices mounted in the customer's products or equipment.
- SANYO Electric Co., Ltd. strives to supply high-quality high-reliability products. However, any and all semiconductor products fail with some probability. It is possible that these probabilistic failures could give rise to accidents or events that could endanger human lives, that could give rise to smoke or fire, or that could cause damage to other property. When designing equipment, adopt safety measures so that these kinds of accidents or events cannot occur. Such measures include but are not limited to protective circuits and error prevention circuits for safe design, redundant design, and structural design.
- In the event that any or all SANYO products (including technical data, services) described or contained herein are controlled under any of applicable local export control laws and regulations, such products must not be exported without obtaining the export license from the authorities concerned in accordance with the above law.
- No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopying and recording, or any information storage or retrieval system, or otherwise, without the prior written permission of SANYO Electric Co., Ltd.
- Any and all information described or contained herein are subject to change without notice due to product/technology improvement, etc. When designing equipment, refer to the "Delivery Specification" for the SANYO product that you intend to use.
- Information (including circuit diagrams and circuit parameters) herein is for example only ; it is not guaranteed for volume production. SANYO believes information herein is accurate and reliable, but no guarantees are made or implied regarding its use or any infringements of intellectual property rights or other rights of third parties.

This catalog provides information as of September, 2000. Specifications and information herein are subject to change without notice.
