

**TC74VHC299F, TC74VHC299FW, TC74VHC299FT****8-BIT PIPO SHIFT REGISTER WITH ASYNCHRONOUS CLEAR**

(Note) The JEDEC SOP (FW) is not available in Japan.

The TC74VHC299 is an advanced high speed CMOS 8-BIT PIPO SHIFT REGISTER fabricated with silicon gate C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

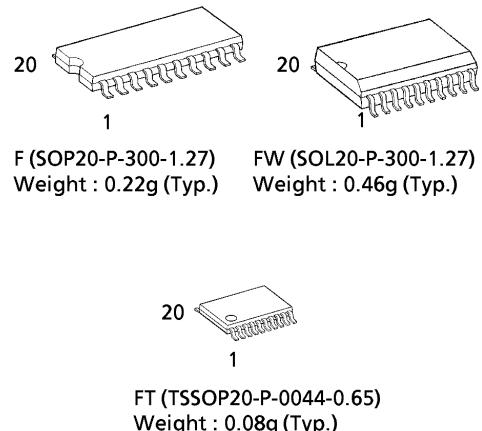

It has a four modes (HOLD, SHIFT LEFT, SHIFT RIGHT and LOAD DATA) controlled by the two selection inputs (S0, S1).

When one or both enable ( $\overline{G}_1$ ,  $\overline{G}_2$ ) are high, the eight I/O are forced to the high-impedance state; however, sequential operation or clearing of the register is not affected.

All inputs are equipped with protection circuits against static discharge.

**FEATURES:**

- High Speed..... $f_{MAX} = 160\text{MHz}(\text{typ.})$   
at  $V_{CC} = 5\text{V}$
- Low Power Dissipation..... $I_{CC} = 4\mu\text{A}(\text{Max.})$  at  $T_a = 25^\circ\text{C}$
- High Noise Immunity ..... $V_{NIH} = V_{NIL} = 28\%V_{CC}$  (Min.)
- Balanced Propagation Delays..... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range  
..... $V_{CC}(\text{opr}) = 2\text{V} \sim 5.5\text{V}$
- Low Noise ..... $V_{OLP} = 1.4\text{V}$  (Max.)
- Pin and Function Compatible with 74ALS299

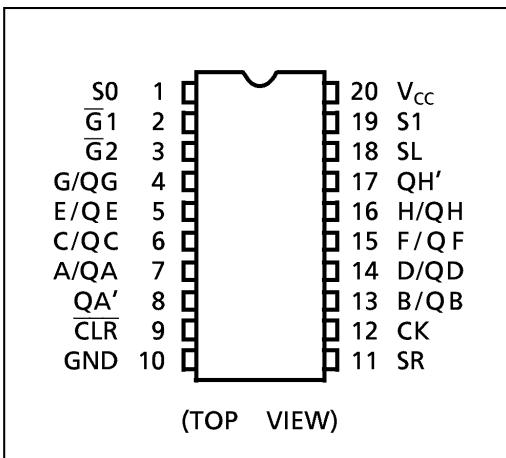

**APPLICATION NOTE**

- 1) Do not apply a signal to A/QA~H/QH bus terminal when it is in the output mode. Damage may result.
- 2) All floating (high impedance) A/QA~H/QH bus terminals must have their input levels fixed by means of pull up or pull down resistors.
- 3) A parasitic diode is formed between A/QA~H/QH bus and V<sub>CC</sub> terminals. Therefore bus terminal can not be used to interface 5V to 3V systems directly.

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
