

The SL2524 is a pin compatible replacement for the SL2521 and SL2522 series of log amplifiers, and exhibits a superior stability performance. The amplifier is a successive detection type which provides linear gain and accurate logarithmic signal compression over a wide bandwidth. The two stages can be operated independently.

When six stages (three SL2524s) are cascaded the strip can be used for IFs between 30-650MHz whilst achieving greater than 65dB dynamic range with a log accuracy of $\pm 1.0\text{dB}$. The balanced limited output also offers accurate phase information with input amplitude.

FEATURES

- 1.3GHz Bandwidth (-3dB)
- Balanced IF limiting
- 3ns Rise Times/5ns Fall Times (six stages)
- 20ns Pulse Handling (six stages)
- Temperature Stabilised
- Surface Mountable

APPLICATIONS

- Ultra Wideband Log Receivers
- Channelised Receivers
- Monopulse Applications

ABSOLUTE MAXIMUM RATINGS

Supply Voltage (V_{CC} above V_{EE})	+7.0V

GENERAL DESCRIPTION

The SL2524 is primarily intended for use in Radar and EW receivers. Six stages (3 chip carriers) can be cascaded to form a very wideband logarithmic amplifier offering >65dB of input dynamic range, with pulse handling of better than 25ns. (See figs 5 and 6.)

A six stage strip also offers balanced IF limiting, linearity (log accuracy) of $< \pm 1.0\text{dB}$, temperature stabilisation and programmable detector characteristics.

The detector has an external resistor set (R_{SET}) pin which allows the major characteristics of the detector to be programmed. With six stage strip it is possible to vary the value of R_{SET} on each detector and so improve the overall log error/linearity.

The detector is full wave and good slew rates are achieved with 2ns rise and 5ns fall times (no video filter). The video bandwidth of a six stage strip is typically 600MHz (-3dB).

The amplifier also offers balanced IF limiting, low phase shift versus input amplitude, and at an IF of 120MHz, less than 5° of phase change is achievable over the input level of -55dBm to +5dBm.

The IF and Video ports can be used simultaneously, so offering phase, frequency and pulse (video) information. A slight loss of dynamic range (2dB) will be observed when the IF ports are used in conjunction with the video.
