## Pin Description

Pin	Symbol	Function
1	TLI1	Transmit level detector input on the line side
2	TLO1	Transmit level detector output on the line side
3	RLO1	Receive level detector output on the line side
4	RLI1	Receive level detector input on the line side
5	GND	Ground
6	CD	Chip Disable A logic low (< 0.8 V) sets normal operation. A logic high (> 2.0 V) disables the IC to conserve power. Input impedance is nominally 90 kΩ.
7	V <sub>B</sub>	Supply voltage 2.8 to 7.0 V, approx. @ 1 mA
8	RLO2	Receive level detector output on the microphone/speaker side
9	RLI2	Receive level detector input on the microphone/speaker side
10	TLDR	Positive control output for U4090B
11	TLDT	Negative control output for U4090B
12	C <sub>T</sub>	Response time An RC at this pin sets the response time for the circuit to switch modes
13	V <sub>M</sub>	It is a system ac ground, supplied by U4090B, V <sub>M</sub> ~ V <sub>B</sub> /2
14	CPT	An RC at this pin sets the time constant for the transmit background monitor
15	TLI2	Transmit level detector input on the microphone/speaker side
16	TLO2	Transmit level detector output on the microphone/speaker side, and input to the transmit background monitor

## Absolute Maximum Ratings

## Ozone Depleting Substances Policy Statement

It is the policy of **TEMIC TELEFUNKEN microelectronic GmbH** to

1. Meet all present and future national and international statutory requirements.
2. Regularly and continuously improve the performance of our products, processes, distribution and operating systems with respect to their impact on the health and safety of our employees and the public, as well as their impact on the environment.

It is particular concern to control or eliminate releases of those substances into the atmosphere which are known as ozone depleting substances (ODSs).

The Montreal Protocol (1987) and its London Amendments (1990) intend to severely restrict the use of ODSs and forbid their use within the next ten years. Various national and international initiatives are pressing for an earlier ban on these substances.

**TEMIC TELEFUNKEN microelectronic GmbH** semiconductor division has been able to use its policy of continuous improvements to eliminate the use of ODSs listed in the following documents.

1. Annex A, B and list of transitional substances of the Montreal Protocol and the London Amendments respectively
2. Class I and II ozone depleting substances in the Clean Air Act Amendments of 1990 by the Environmental Protection Agency (EPA) in the USA
3. Council Decision 88/540/EEC and 91/690/EEC Annex A, B and C (transitional substances) respectively.

**TEMIC** can certify that our semiconductors are not manufactured with ozone depleting substances and do not contain such substances.

**We reserve the right to make changes to improve technical design and may do so without further notice.**

Parameters can vary in different applications. All operating parameters must be validated for each customer application by the customer. Should the buyer use TEMIC products for any unintended or unauthorized application, the buyer shall indemnify TEMIC against all claims, costs, damages, and expenses, arising out of, directly or indirectly, any claim of personal damage, injury or death associated with such unintended or unauthorized use.
