DESCRIPTION

The LD1086 is a LOW DROP Voltage Regulator able to provide up to 1.5A of Output Current. Dropout is guaranteed at a maximum of 1.5V at the maximum output current, decreasing at lower loads. The LD1086 is a pin compatible with older 3-terminal adjustable regulators, but has better performances in term of drop and output tolerance. A 2.85V output version is suitable for SCSI-2 active termination. Unlike

PNP regulators, where a part of the output current is wasted as quiescent current, the LD1086 quiescent current flow into the load, so increase efficiency. Only a $10\ \mu\text{F}$ minimum capacitor is needed for stability. The device is supplied in TO-220 and D²PAK packages. On chip trimming allows the regulator to reach a very tight output voltage tolerance, within $\pm 1\%$ at 25°C .

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
V_{IN}	DC Input Voltage	30	V
I_{OUT}	Output Current	Internally Limited	mA
