

## GENERAL DESCRIPTION

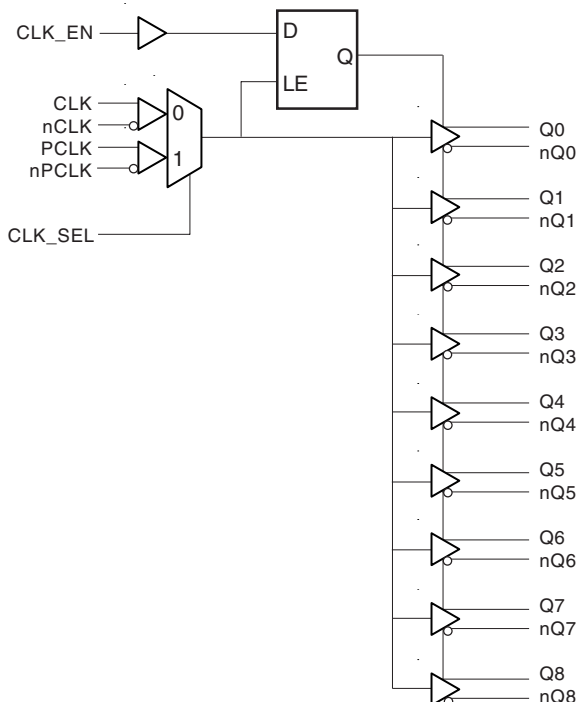

The ICS853031 is a low skew, high performance 1-to-9 Differential-to-2.5V/3.3V LVPECL/ECL Fanout Buffer and a member of the HiPerClockS™ family of High Performance Clock Solutions from ICS. The ICS853031 has two selectable clock inputs. The CLK, nCLK pair can accept most standard differential input levels. The PCLK, nPCLK pair can accept LVPECL, LVDS, CML, or SSTL input levels. The clock enable is internally synchronized to eliminate runt pulses on the outputs during asynchronous assertion/deassertion of the clock enable pin.

Guaranteed output skew and part-to-part skew characteristics make the ICS853031 ideal for high performance workstation and server applications.

## FEATURES

- 9 differential 2.5V/3.3V LVPECL/ECL outputs
- Selectable differential CLK, nCLK or LVPECL clock inputs
- CLK, nCLK pair can accept the following differential input levels: LVPECL, LVDS, LVHSTL, HCSL, SSTL,
- PCLK, nPCLK supports the following input types: LVPECL, LVDS, CML, SSTL
- Output frequency: 1.6GHz (typical)
- Translates any single ended input signal (LVCMOS, LVTTTL, GTL) to 3.3V LVPECL levels with resistor bias on nCLK or nPCLK inputs
- Output skew: 20ps (typical)
- Part-to-part skew: 75ps (typical)
- Propagation delay: 875ps (typical)
- LVPECL mode operating voltage supply range:  $V_{CC} = 2.375V$  to  $3.465V$ ,  $V_{EE} = 0V$
- ECL mode operating voltage supply range:  $V_{CC} = 0V$ ,  $V_{EE} = -2.375V$  to  $-3.465V$
- $-40^{\circ}C$  to  $85^{\circ}C$  ambient operating temperature
- Lead-Free package available
- Pin compatible with ICS8531-01

**ABSOLUTE MAXIMUM RATINGS**

Supply Voltage, $V_{CC}$	4.6V
Negative Supply Voltage, $V_{EE}$	-4.6V
Inputs, $V_I$	-0.5V to $V_{CC} + 0.5V$
Outputs, $I_O$	
Continuous Current	50mA
Surge Current	100mA
Operating Temperature Range, TA	-40°C to +85°C
Storage Temperature, $T_{STG}$	-65°C to 150°C
Package Thermal Impedance, $\theta_{JA}$ (Junction-to-Ambient)	47.9°C/W (0 lfpm)

**NOTE:** Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

## APPLICATION INFORMATION

### WIRING THE DIFFERENTIAL INPUT TO ACCEPT SINGLE ENDED LEVELS

Figure 2 shows how the differential input can be wired to accept single ended levels. The reference voltage  $V_{REF} \approx V_{CC}/2$  is generated by the bias resistors R1, R2 and C1. This bias circuit should be located as close as possible to the input pin. The ratio

of R1 and R2 might need to be adjusted to position the  $V_{REF}$  in the center of the input voltage swing. For example, if the input clock swing is only 2.5V and  $V_{CC} = 3.3V$ ,  $V_{REF}$  should be 1.25V and  $R2/R1 = 0.609$ .

### TERMINATION FOR 3.3V LVPECL OUTPUTS

The clock layout topology shown below is a typical termination for LVPECL outputs. The two different layouts mentioned are recommended only as guidelines.

FOUT and nFOUT are low impedance follower outputs that generate ECL/LVPECL compatible outputs. Therefore, terminating resistors (DC current path to ground) or current sources must be used for functionality. These outputs are designed to

drive 50Ω transmission lines. Matched impedance techniques should be used to maximize operating frequency and minimize signal distortion. Figures 3A and 3B show two different layouts which are recommended only as guidelines. Other suitable clock layouts may exist and it would be recommended that the board designers simulate to guarantee compatibility across all printed circuit and clock component process variations.

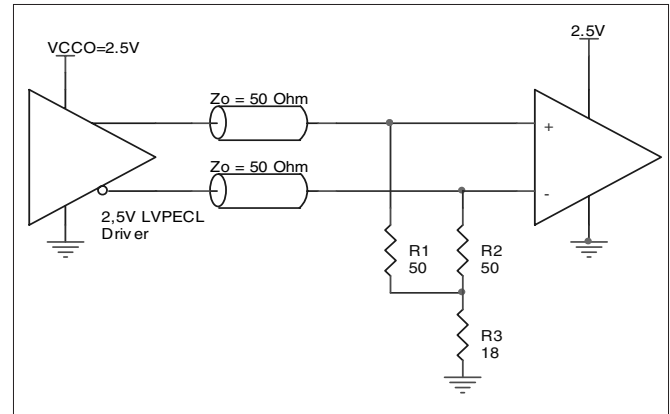

**TERMINATION FOR 2.5V LVPECL OUTPUT**

Figure 4A and Figure 4B show examples of termination for 2.5V LVPECL driver. These terminations are equivalent to terminating 50Ω to  $V_{CC} - 2V$ . For  $V_{CC} = 2.5V$ , the  $V_{CC} - 2V$  is very close to

ground level. The R3 in Figure 4B can be eliminated and the termination is shown in Figure 4C.

**FIGURE 4A. 2.5V LVPECL DRIVER TERMINATION EXAMPLE**

**FIGURE 4B. 2.5V LVPECL DRIVER TERMINATION EXAMPLE**

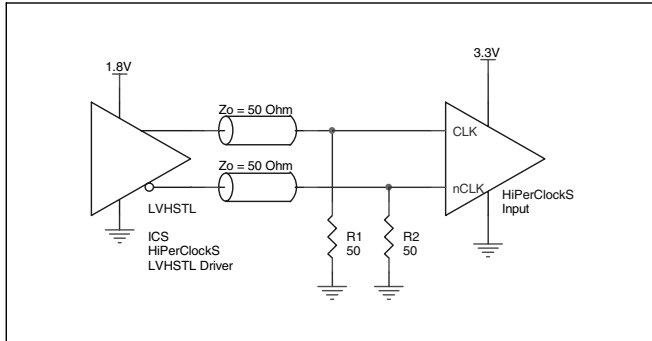

**FIGURE 4C. 2.5V LVPECL TERMINATION EXAMPLE**

**DIFFERENTIAL CLOCK INPUT INTERFACE**

The CLK/nCLK accepts LVDS, LVPECL, LVHSTL, SSTL, HCSTL and other differential signals. Both  $V_{SWING}$  and  $V_{OH}$  must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. Figures 5A to 5E show interface examples for the HiPerClockS CLK/nCLK input driven by the most common driver types. The input interfaces suggested

here are examples only. Please consult with the vendor of the driver component to confirm the driver termination requirements. For example in *Figure 5A*, the input termination applies for ICS HiPerClockS LVHSTL drivers. If you are using an LVHSTL driver from another vendor, use their termination recommendation.

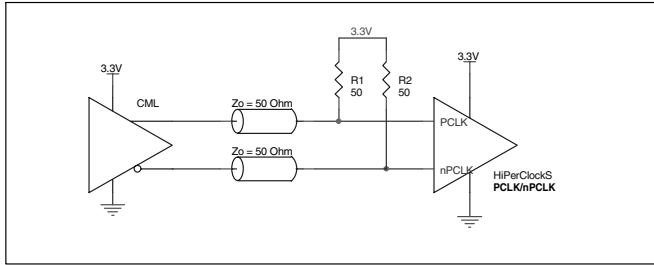

**FIGURE 5E. HiPerClockS CLK/nCLK INPUT DRIVEN BY 3.3V LVPECL DRIVER WITH AC COUPLE**

**LVPECL CLOCK INPUT INTERFACE**

The PCLK /nPCLK accepts LVPECL, CML, SSTL and other differential signals. Both  $V_{SWING}$  and  $V_{OH}$  must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. Figures 6A to 6E show interface examples for the HiPerClockS PCLK/nPCLK input driven by the most common driver types. The input interfaces suggested

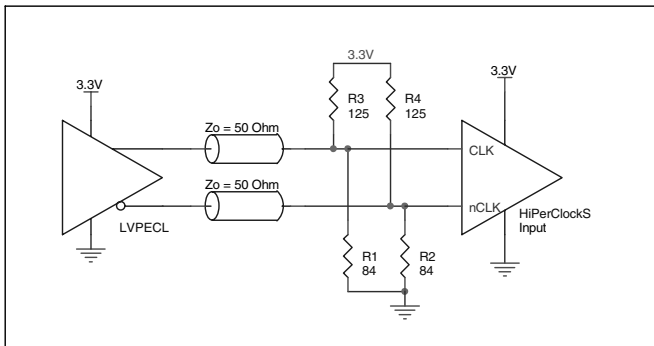

here are examples only. If the driver is from another vendor, use their termination recommendation. Please consult with the vendor of the driver component to confirm the driver termination requirements.

### APPLICATION SCHEMATIC EXAMPLE

Figure 7 shows an example of ICS853031 application schematic. In this example, the device is operated at  $V_{CC}=3.3V$ . The decoupling capacitor should be located as close as possible to the power pin. The input is driven by a 3.3V LVPECL driver. Only

two terminations examples are shown in this schematic. For more termination approaches, please refer to the LVPECL Termination Application Note.

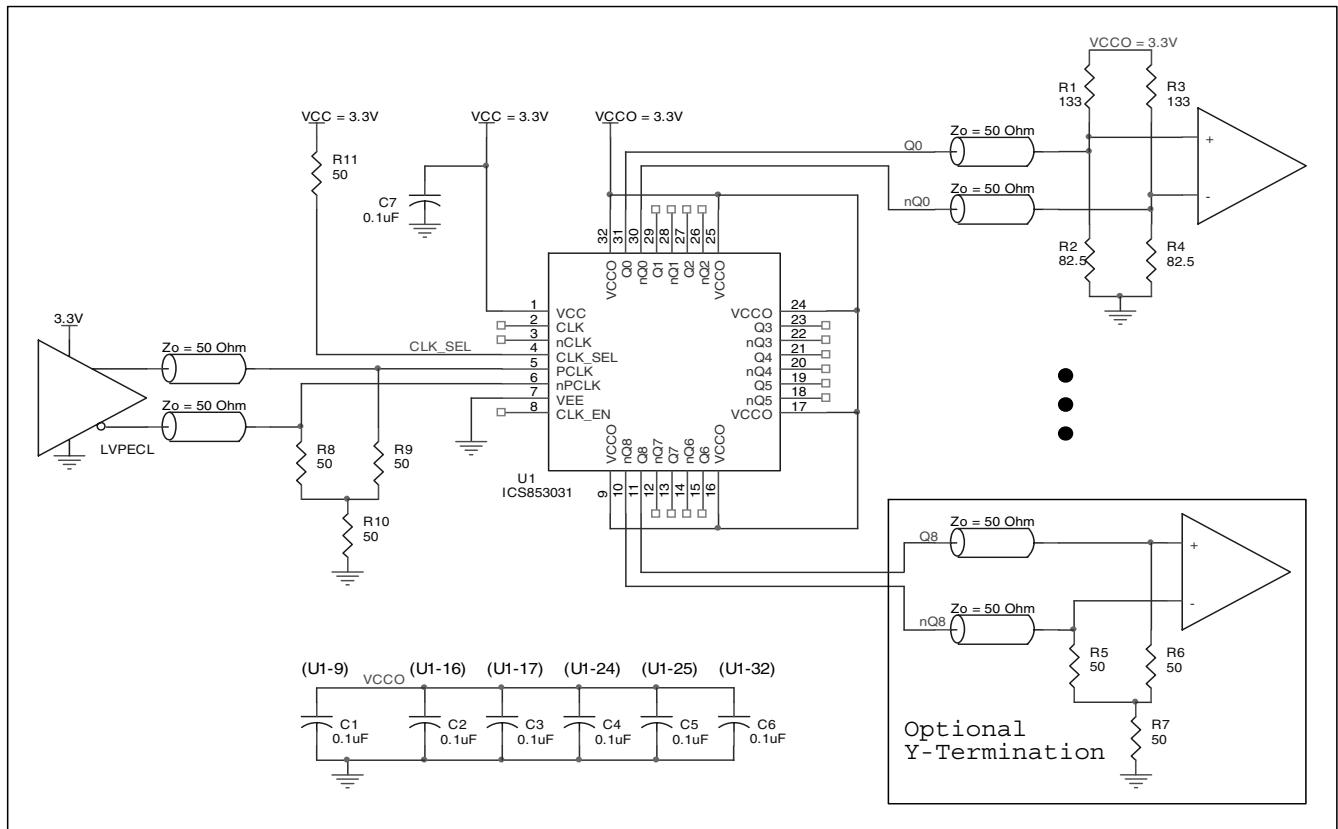

FIGURE 7. ICS853031 SCHEMATIC EXAMPLE

## POWER CONSIDERATIONS

This section provides information on power dissipation and junction temperature for the ICS853031. Equations and example calculations are also provided.

### 1. Power Dissipation.

The total power dissipation for the ICS853031 is the sum of the core power plus the power dissipated in the load(s). The following is the power dissipation for  $V_{CC} = 3.3V \pm 5\% = 3.465V$ , which gives worst case results.

**NOTE:** Please refer to Section 3 for details on calculating power dissipated in the load.

- Power (core)<sub>MAX</sub> =  $V_{CC\_MAX} * I_{EE\_MAX} = 3.465V * 77mA = 266.8mW$
- Power (outputs)<sub>MAX</sub> = **30.2mW/Loaded Output pair**  
If all outputs are loaded, the total power is  $9 * 30.94mW = 278.5mW$

**Total Power**<sub>MAX</sub> (3.465V, with all outputs switching) =  $266.8mW + 278.5mW = 545.3mW$

### 2. Junction Temperature.

Junction temperature, T<sub>j</sub>, is the temperature at the junction of the bond wire and bond pad and directly affects the reliability of the device. The maximum recommended junction temperature for HiPerClockS™ devices is 125°C.

The equation for T<sub>j</sub> is as follows:  $T_j = \theta_{JA} * Pd\_total + T_A$

T<sub>j</sub> = Junction Temperature

$\theta_{JA}$  = junction-to-Ambient Thermal Resistance

Pd<sub>total</sub> = Total Device Power Dissipation (example calculation is in section 1 above)

T<sub>A</sub> = Ambient Temperature

In order to calculate junction temperature, the appropriate junction-to-ambient thermal resistance  $\theta_{JA}$  must be used. Assuming a moderate air flow of 200 linear feet per minute and a multi-layer board, the appropriate value is 42.1°C/W per Table 6 below.

Therefore, T<sub>j</sub> for an ambient temperature of 85°C with all outputs switching is:

$85^\circ C + 0.545W * 42.1^\circ C/W = 108^\circ C$ . This is well below the limit of 125°C.

This calculation is only an example. T<sub>j</sub> will obviously vary depending on the number of loaded outputs, supply voltage, air flow, and the type of board (single layer or multi-layer).

**TABLE 6. THERMAL RESISTANCE  $\theta_{JA}$  FOR 32-PIN LQFP FORCED CONVECTION**

<b><math>\theta_{JA}</math> by Velocity (Linear Feet per Minute)</b>			
	<b>0</b>	<b>200</b>	<b>500</b>
Single-Layer PCB, JEDEC Standard Test Boards	67.8°C/W	55.9°C/W	50.1°C/W
Multi-Layer PCB, JEDEC Standard Test Boards	47.9°C/W	42.1°C/W	39.4°C/W

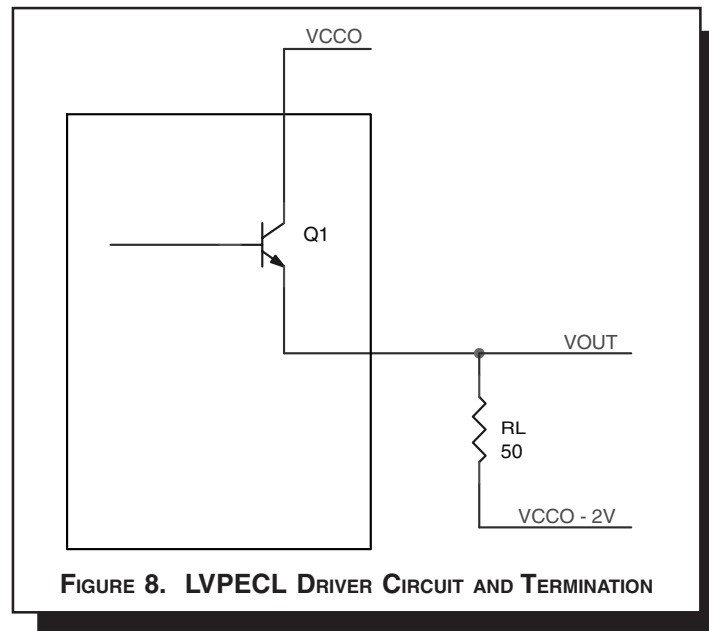

**NOTE:** Most modern PCB designs use multi-layered boards. The data in the second row pertains to most designs.

### 3. Calculations and Equations.

The purpose of this section is to derive the power dissipated into the load.

LVPECL output driver circuit and termination are shown in *Figure 8*.

**FIGURE 8. LVPECL DRIVER CIRCUIT AND TERMINATION**

To calculate worst case power dissipation into the load, use the following equations which assume a 50Ω load, and a termination voltage of  $V_{CCO} - 2V$ .

- For logic high,  $V_{OUT} = V_{OH\_MAX} = V_{CCO\_MAX} - 0.935V$

$$(V_{CCO\_MAX} - V_{OH\_MAX}) = 0.935V$$

- For logic low,  $V_{OUT} = V_{OL\_MAX} = V_{CCO\_MAX} - 1.67V$

$$(V_{CCO\_MAX} - V_{OL\_MAX}) = 1.67V$$

$Pd\_H$  is power dissipation when the output drives high.

$Pd\_L$  is the power dissipation when the output drives low.

$$Pd\_H = [(V_{OH\_MAX} - (V_{CCO\_MAX} - 2V))/R_L] * (V_{CCO\_MAX} - V_{OH\_MAX}) = [(2V - (V_{CCO\_MAX} - V_{OH\_MAX}))/R_L] * (V_{CCO\_MAX} - V_{OH\_MAX}) = [(2V - 0.935V)/50\Omega] * 0.935V = 19.92mW$$

$$Pd\_L = [(V_{OL\_MAX} - (V_{CCO\_MAX} - 2V))/R_L] * (V_{CCO\_MAX} - V_{OL\_MAX}) = [(2V - (V_{CCO\_MAX} - V_{OL\_MAX}))/R_L] * (V_{CCO\_MAX} - V_{OL\_MAX}) = [(2V - 1.67V)/50\Omega] * 1.67V = 11.2mW$$

Total Power Dissipation per output pair =  $Pd\_H + Pd\_L = 30.94mW$

## RELIABILITY INFORMATION

TABLE 7.  $\theta_{JA}$  VS. AIR FLOW TABLE FOR 32 LEAD LQFP

Integrated  
Circuit  
Systems, Inc.

**ICS853031**

LOW SKEW, 1-TO-9

DIFFERENTIAL-TO-2.5V/3.3V LVPECL/ECL FANOUT BUFFER

**TABLE 9. ORDERING INFORMATION**

Part/Order Number	Marking	Package	Count	Temperature
ICS853031AY	ICS853031AY	32 Lead LQFP	250 per tray	-40°C to 85°C
ICS853031AYT	ICS853031AY	32 Lead LQFP on Tape and Reel	1000	-40°C to 85°C
ICS853031AYLF	ICS853031AYL	32 Lead "Lead-Free" LQFP	250 per tray	-40°C to 85°C
ICS853031AYLFT	ICS853031AYL	32 Lead "Lead-Free" LQFP on Tape and Reel	1000	-40°C to 85°C

The aforementioned trademark, HiPerClockS™ is a trademark of Integrated Circuit Systems, Inc. or its subsidiaries in the United States and/or other countries.

While the information presented herein has been checked for both accuracy and reliability, Integrated Circuit Systems, Incorporated (ICS) assumes no responsibility for either its use or for infringement of any patents or other rights of third parties, which would result from its use. No other circuits, patents, or licenses are implied. This product is intended for use in normal commercial and industrial applications. Any other applications such as those requiring high reliability or other extraordinary environmental requirements are not recommended without additional processing by ICS. ICS reserves the right to change any circuitry or specifications without notice. ICS does not authorize or warrant any ICS product for use in life support devices or critical medical instruments.

REVISION HISTORY SHEET				
Rev	Table	Page	Description of Change	Date
B	T4B	4	LVCMOS Table - changed $I_{IL}$ (CLK_SEL) from -10 $\mu$ A min. to -50 $\mu$ A min.	9/10/03
	T4C	4	Differential Table - change $I_{IL}$ (CLK) from -10 $\mu$ A min. to -50 $\mu$ A min.	
	T4D	5	3.3V LVPECL Table - change $V_{OH}$ @ 85° to 2.22V min. and 2.295V typical from 2.295V min. and 2.33V typical. Changed $I_{IL}$ (PCLK) from -10 $\mu$ A min. to -50 $\mu$ A min.	
	T4E	5	2.5V LVPECL Table - change $V_{OH}$ @ 85° to 1.42V min. and 1.495V typical from 1.495V min. and 1.53V typical.	
	T4F	6	ECL Table - change $V_{OH}$ @ 85° to -1.08V min. and -1.005V typical from -1.005V min. and -0.97V typical.	
			9 12	
B		13	Added Schematic Layout	8/19/04
B	2	T1	Pin Description Table - changed nCLK & nPCLK Type to Pullup (only).	9/16/04
	4	T4B	LVCMOS Table - added 2.625V in Test Conditions.	
	5	T4D & E	LVPECL DC Characteristics Tables - corrected Note 3.	
	6	T4F	ECL DC Characteristics Tables - corrected Note 3.	
	18	T9	Ordering Information Table - added Lead-Free part number.
