DESCRIPTION

NEC's UPC8211TK is a silicon germanium (SiGe) monolithic integrated circuit designed as low noise amplifier for GPS and as a general low noise amplifier for mobile communications.

The package is 6-pin lead-less minimold (1.5 x 1.3 x 0.55 mm) suitable for surface mount and optimized for very densely populated compact designs.

This IC is manufactured using NEC's 60 GHz f_TUHS2 (Ultra High Speed Process) silicon bipolar process. This process can realize excellent low noise performance and low power consumption simultaneously.

NEC's stringent quality assurance and test procedures ensure the highest reliability and performance.
