MCP (Multi-Chip Package) FLASH MEMORY & SRAM cmos

16M (×16) FLASH MEMORY & 1M (× 8) STATIC RAM

MB84VA2106-10/MB84VA2107-10

■ FEATURES

- Power supply voltage of 2.7 to 3.6 V
- High performance

100 ns maximum access time

- Operating Temperature
 - -20 to +85°C

— FLASH MEMORY

- Minimum 100,000 write/erase cycles
- · Sector erase architecture

One 8 K word, two 4 K words, one 16 K word, and thirty one 32 K words.

Any combination of sectors can be concurrently erased. Also supports full chip erase.

Boot Code Sector Architecture

MB84VA2106: Top sector MB84VA2107: Bottom sector

Embedded Erase[™] Algorithms

Automatically pre-programs and erases the chip or any sector

• Embedded Program™ Algorithms

Automatically writes and verifies data at specified address

- Data Polling and Toggle Bit feature for detection of program or erase cycle completion
- Ready-Busy output (RY/BY)

Hardware method for detection of program or erase cycle completion

• Automatic sleep mode

When addresses remain stable, automatically switch themselves to low power mode.

- Low Vcc write inhibit ≤ 2.5 V
- Erase Suspend/Resume

Suspends the erase operation to allow a read in another sector within the same device

Please refer to "MBM29LV160T/B" data sheet in detailed function

— SRAM

Power dissipation

Operating: 35 mA max. Standby: 30 μA max.

- Power down features using CE1s and CE2s
- Data retention supply voltage: 2.0 V to 3.6 V

Legend: $L = V_{IL}$, $H = V_{IH}$, $X = V_{IL}$ or V_{IH} . See DC Characteristics for voltage levels.

Notes: 1. Other operations except for indicated this column are inhibited.

- 2. WE can be V_{IL} if \overline{OE} is V_{IL} , \overline{OE} at V_{IH} initiates the write operations.
- 3. Do not apply $\overline{CEf} = V_{IL}$, $\overline{CE1}s = V_{IL}$ and $CE2s = V_{IH}$ at a time.

■ FLEXIBLE SECTOR-ERASE ARCHITECTURE on FLASH MEMORY

- •One 8 K word, two 4 K words, one 16 K word, and thirty one 32 K words.
- •Individual-sector, multiple-sector, or bulk-erase capability.

Sector Erase Resun	ne	Erase can be resumed after suspend with Addr. ("H" or "L"). Data (30H)											
Set to Fast Mode	3	555H	AAH	2AAH	55H	555H	20H	_	_	_	_	_	_
Fast Program (Note)	2	XXXH	A0H	PA	PD	_	_	_	_	_	_	_	_
Reset from Fast Mode (Note)	2	XXXH	90H	XXXH	F0H	_	_	_	_	_	_	_	_
Extended Sector Protect	4	XXXH	60H	SPA	60H	SPA	40H	SPA	SD	_	_	_	_

Address bits A_{11} to $A_{20} = X =$ "H" or "L" for all address commands except for Program Address (PA) and Sector Address (SA).

Bus operations are defined in Table 2.

Both Read/Reset commands are functionally equivalent, resetting the device to the read mode.

- RA =Address of the memory location to be read.
- PA =Address of the memory location to be programmed. Addresses are latched on the falling edge of the write pulse.
- SA =Address of the sector to be erased. The combination of A₂₀, A₁₉, A₁₈, A₁₇, A₁₆, A₁₅, A₁₄, and A₁₃ will uniquely select any sector.
- RD =Data read from location RA during read operation.
- PD =Data to be programmed at location PA.
- SPA =Sector address to be protected. Set sector address (SA) and $(A_6, A_1, A_0) = (0, 1, 0)$.
- SD =Sector protection verify data. Output 01H at protected sector addresses and output 00H at unprotected sector addresses.

Note: This command is valid while Fast Mode.

■ ABSOLUTE MAXIMUM RATINGS

Storage Temperature	55°C to +125°C
Ambient Temperature with Power Applied	–25°C to +85°C
Voltage with Respect to Ground All pins (Note)	0.3 V to Vccf +0.5 V
	-0.3 V to Vccs +0.5 V
Vccf/Vccs Supply (Note)	0.3 V to +4.6 V

Note: Minimum DC voltage on input or I/O pins are -0.5 V. During voltage transitions, inputs may negative overshoot Vss to -2.0 V for periods of up to 20 ns. Maximum DC voltage on output and I/O pins are Vccf +0.5 V or Vccs +0.5 V. During voltage transitions, outputs may positive overshoot to Vcc +2.0 V for periods of up to 20 ns.

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

■ RECOMMENDED OPERATING RANGES

Commercial Devices

Ambient Temperature (T_A)—20°C to +85°C

Vccf/Vccs Supply Voltages.....+2.7 V to +3.6 V

Operating ranges define those limits between which the functionality of the device is guaranteed.

WARNING: Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representative beforehand.

t DH	Data Hold Time	0	_	ns

• Write Cycle (Note 4) (WE control) (SRAM)

Notes: 2.If CE1s goes LOW (or CE2s goes HIGH) coincident with or after WE goes LOW, the output will remain at high impedance.

- 3.If CE1s goes HIGH (or CE2s goes LOW) coincident with or before WE goes HIGH, the output will remain at high impedance.
- 4.If $\overline{\text{OE}}$ is HIGH during the write cycle, the outputs will remain at high impedance.
- 5.Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

• Write Cycle (Note 4) (CE1s control) (SRAM)

Notes: 2.If CE1s goes LOW (or CE2s goes HIGH) coincident with or after WE goes LOW, the output will remain at high impedance.

- 3.If CE1s goes HIGH (or CE2s goes LOW) coincident with or before WE goes HIGH, the output will remain at high impedance.
- 4.If $\overline{\text{OE}}$ is HIGH during the write cycle, the outputs will remain at high impedance.
- 5.Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

• Write Cycle (Note 4) (CE2s Control) (SRAM)

Notes: 2.If CE1s goes LOW (or CE2s goes HIGH) coincident with or after WE goes LOW, the output will remain at high impedance.

- 3.If CE1s goes HIGH (or CE2s goes LOW) coincident with or before WE goes HIGH, the output will remain at high impedance.
- 4.If $\overline{\text{OE}}$ is HIGH during the write cycle, the outputs will remain at high impedance.
- 5.Because I/O signals may be in the output state at this Time, input signals of reverse polarity must not be applied.

■ ERASE AND PROGRAMMING PERFORMANCE (Flash)

Parameter	Limits			Unit	Comment
raiailletei	Min.	Тур.	Max.	Onit	Comment
Sector Erase Time	_	1	15	sec	Excludes programming time prior to erasure
Programming Time	_	16	5,200	μs	Excludes system-level overhead
Chip Programming Time	_	16.8	100	sec	Excludes system-level overhead
Erase/Program Cycle	100,000	_	_	cycles	

■ DATA RETENTION CHARACTERISTICS (SRAM)

Parameter Symbol	Parameter Description		Min.	Тур.	Max.	Unit
V _{DH}	Data Retention Supply Voltage		2.0	_	3.6	V
lanas	Standby Current	V _{DH} = 3.0 V	_	_	30*	μΑ
DDS2		V _{DH} = 3.6 V	_	_	40	μΑ
t cdr	Chip Deselect to Data Retention Mode Time		0	_	_	ns
t R	Recovery Time		5	_	_	ms

^{* : 5} μ A (Max.) at T_A = -20°C to +40°C

• CE1s Controlled Data Retention Mode (Note 1)

• CE2s Controlled Data Retention Mode (Note 3)

Notes: 1. In CE1s controlled data retention mode, input level of CE2s should be fixed Vccs to Vccs-0.2V or Vss to 0.2V during data retention mode. Other input and input/output pins can be used between -0.3V to Vccs+0.3V.

- 2. When CE1s is operating at the V_H min. level (2.2 V), the standby current is given by I_{SB1}s during the transition of V_{ccs} from 3.6 to 2.2 V.
- 3. In CE2s controlled data retention mode, input and input/output pins can be used between -0.3V to Vccs+0.3V.

■ PIN CAPACITANCE

Parameter Symbol	Parameter Description	Test Setup	Тур.	Max.	Unit
Cin	Input Capacitance	V _{IN} = 0	T.B.D	T.B.D	pF
Соит	Output Capacitance	Vout = 0	T.B.D	T.B.D	pF
C _{IN2}	Control Pin Capacitance	Vin = 0	T.B.D	T.B.D	pF

Note: Test conditions T_A = 25°C, f = 1.0 MHz

■ HANDLING OF PACKAGE

Please handle this package carefully since the sides of packages are right angle.

■ CAUTION

- 1)The high voltage (VID) can not apply to address pins and control pins except RESET. Therefore, it can not use autoselect and sector protect function by applying the high voltage (VID) to specific pins.
- 2)For the sector protection, since the high voltage (VID) can be applied to the RESET, it can be protected the sector useing "Extended sector protect" command.

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

FUJITSU semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

CAUTION:

Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with FUJITSU sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Control Law of Japan, the prior authorization by Japanese government should be required for export of those products from Japan.
