

## VFM Step-up DC/DC Converter

### General Description

The RT9261 Series are VFM Step-up DC/DC ICs with ultra low supply current by CMOS process and suitable for use with battery-powered instruments.

The RT9261 IC consists of an oscillator, a VFM control circuit, a driver transistor (LX switch), a reference voltage unit, an error amplifier, resistors for voltage detection, and a LX switch protection circuit. A low ripple and high efficiency step-up DC/DC converter can be constructed of this RT9261 IC with only three external components.

The RT9261A IC provides with a drive pin (EXT) for an external transistor, so that a power transistor can be externally applied. Therefore, the RT9261A IC is recommended for applications where large currents are required. CE pin enables circuit to set the standby supply current at a maximum of  $0.5\mu A$ .

### Ordering Information

RT9261A-	□ □ □	□
		Package type
		B : SOT-25
		X : SOT-89
		Operating temperature range
		C: Commercial standard
		Output voltage
	15	: 1.5V
	16	: 1.6V
	:	
	49	: 4.9V
	50	: 5.0V
	A	: Use external switch
		Use internal switch

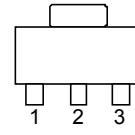

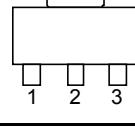

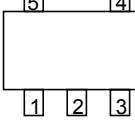

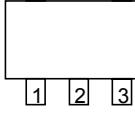

### Features

- Minimal Number of External Components ( Only an inductor, a diode, and a capacitor)
- Ultra Low Input Current (  $5\mu A$  at Switch Off)
- $\pm 2\%$  High Output Voltage Accuracy
- Low Ripple and Low Noise
- Low Start-up Voltage, 0.85V at 1mA
- 75% Efficiency with Low Cost Inductor
- $+50 \text{ ppm}/^\circ\text{C}$  Low Temperature-Drift
- SOT-89 and SOT-25 Small Packages

### Applications

- Power source for battery-powered equipment
- Power source for cameras, camcorders, VCRs, PDAs, pagers, electronic data banks, and hand-held communication equipment
- Power source for applications, which require higher voltage than that of batteries used in the appliances
