# International IN Rectifier

# REPETITIVE AVALANCHE AND dv/dt RATED HEXFET<sup>®</sup> TRANSISTOR

# IRHNA7260 IRHNA8260 N-CHANNEL MEGA RAD HARD

#### 200 Volt, 0.070Ω, MEGA RAD HARD HEXFET

International Rectifier's RAD HARD technology HEXFETs demonstrate virtual immunity to SEE failure. Additionally, under **identical** pre- and post-radiation test conditions, International Rectifier's RAD HARD HEXFETs retain **identical** electrical specifications up to 1 x 10<sup>5</sup> Rads (Si) total dose. No compensation in gate drive circuitry is required. These devices are also capable of surviving transient ionization pulses as high as 1 x 10<sup>12</sup> Rads (Si)/Sec, and return to normal operation within a few microseconds. Since the RAD HARD process utilizes International Rectifier's patented HEXFET technology, the user can expect the highest quality and reliability in the industry.

RAD HARD HEXFET transistors also feature all of the well-established advantages of MOSFETs, such as voltage control, very fast switching, ease of paralleling and temperature stability of the electrical parameters.

They are well-suited for applications such as switching power supplies, motor controls, inverters, choppers, audio amplifiers and high-energy pulse circuits in space and weapons environments.

#### **Product Summary**

Part Number	BVDSS	RDS(on)	lD
IRHNA7260	200V	0.070Ω	43A
IRHNA8260	200V	0.070Ω	43A

#### Features:

- Radiation Hardened up to 1 x 10<sup>6</sup> Rads (Si)
- Single Event Burnout (SEB) Hardened
- Single Event Gate Rupture (SEGR) Hardened
- Gamma Dot (Flash X-Ray) Hardened
- Neutron Tolerant
- Identical Pre- and Post-Electrical Test Conditions
- Repetitive Avalanche Rating
- Dynamic dv/dt Rating
- Simple Drive Requirements
- Ease of Paralleling
- Hermetically Sealed
- Surface Mount
- Lightweight

#### **Absolute Maximum Ratings**

#### **Pre-Radiation**

	Parameter	IRHNA7260, IRHNA8260	Units
ID @ VGS = 12V, TC = 25°C	Continuous Drain Current	43	
ID @ VGS = 12V, TC = 100°C	Continuous Drain Current	27	A
IDM	Pulsed Drain Current ①	172	7
P <sub>D</sub> @ T <sub>C</sub> = 25°C	Max. Power Dissipation	300	W
	Linear Derating Factor	2.4	W/K ©

#### IRHNA7260, IRHNA8260 Devices

#### **Radiation Characteristics**

#### **Radiation Performance of Rad Hard HEXFETs**

International Rectifier Radiation Hardened HEXFETs are tested to verify their hardness capability. The hardness assurance program at International Rectifier uses two radiation environments.

Every manufacturing lot is tested in a low dose rate (total dose) environment per MIL-STD-750, test method 1019. International Rectifier has imposed a standard gate voltage of 12 volts per note 6 and a VDSS bias condition equal to 80% of the device rated voltage per note 7. Pre- and post-radiation limits of the devices irradiated to  $1 \times 10^5$  Rads (Si) are identical and are presented in Table 1, column 1, IRHNA7260. The values in Table 1 will be met for

either of the two low dose rate test circuits that are used. Both pre- and post-radiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison. It should be noted that at a radiation level of  $1 \times 10^5$  Rads (Si), no change in limits are specified in DC parameters.

High dose rate testing may be done on a special request basis, using a dose rate up to  $1 \times 10^{12}$  Rads (Si)/Sec.

International Rectifier radiation hardened HEXFETs have been characterized in neutron and heavy ion Single Event Effects (SEE) environments. Single Event Effects characterization is shown in Table 3.

#### IRHNA7260, IRHNA8260 Devices

#### **Radiation Characteristics**

- Repetitive Rating; Pulse width limited by maximum junction temperature.
   Refer to current HEXFET reliability report.
- $\label{eq:VDD} \begin{array}{l} @ \ V_{DD} = 50 \text{V}, \ \text{Starting } T_J = 25^\circ\text{C}, \\ \text{E}_{AS} = [0.5 * L * (I_L^2) * [\text{BV}_{DSS}/(\text{BV}_{DSS}\text{-V}_{DD})] \\ \text{Peak } I_L = 43 \text{A}, \ \text{V}_{GS} = 12 \text{V}, \ 25 \leq \ R_G \leq 200 \Omega \end{array}$
- $I_{SD} \le 43A, di/dt \le 170 A/\mu s,$  $V_{DD} \le BV_{DSS}, T_J \le 150^{\circ}C$  $Suggested RG = 2.35\Omega$
- ④ Pulse width  $\leq$  300  $\mu$ s; Duty Cycle  $\leq$  2%
- S K/W = °C/W W/K = W/°C

- ⑥ Total Dose Irradiation with VGS Bias. 12 volt VGS applied and VDS = 0 during irradiation per MIL-STD-750, method 1019.
- Inis test is performed using a flash x-ray source operated in the e-beam mode (energy ~2.5 MeV), 30 nsec pulse.
- Process characterized by independent laboratory.
- IP All Pre-Radiation and Post-Radiation test conditions are identical to facilitate direct comparison for circuit applications.
