## PAL TV CHROMA DEMODULATOR COMBINATION FAIRCHILD LINEAR INTEGRATED CIRCUIT

**GENERAL DESCRIPTION**— The TDA2522 is a monolithic integrated circuit designed as a synchronous demodulator for PAL color television receivers. It includes an 8.8 MHz oscillator and divider to generate two 4.4 MHz reference signals and provides color difference outputs.

The TDA2522 is intended to interface directly with the TDA2560 with a minimum of external components. The TDA2530 may be added if RGB drive is required. The TDA2522 is constructed using the Fairchild Planar\* process.

- 8.8 MHz CHROMA SUBCARRIER OSCILLATOR AND DIVIDER TO GENERATE TWO 4.4 MHz REFERENCE SIGNALS

- G-Y output is typically equal to  $-0.51\text{ (R-Y)} - 0.19\text{ (B-Y)}$ .
- Increase  $V_{IN} = V_5 = V_6$  until gain is equal to 0.7 of small signal gain.
- Color bar with 75% saturation.
- Burst amplitude is kept constant by ACC but varies linearly with keying pulse width.
