

# M63154AFP

## 3-PHASE BRUSHLESS MOTOR DRIVER

REJ03F0025-0100Z

Rev.1.0

Sep.16.2003

### Description

M63154AFP is a semiconductor integrated circuit designed for 3 phase brush less motor driver.

Also, this device has the PWM control system for Spindle.

Therefore this device is low power dissipation

This device is good for high rotation motor.

### Features

- This IC has PWM output function.  
Therefore, this IC is low power dissipation.
- Hall-sensor motor drive function.
- Built-in Thermal Shut Down circuit.

### Application

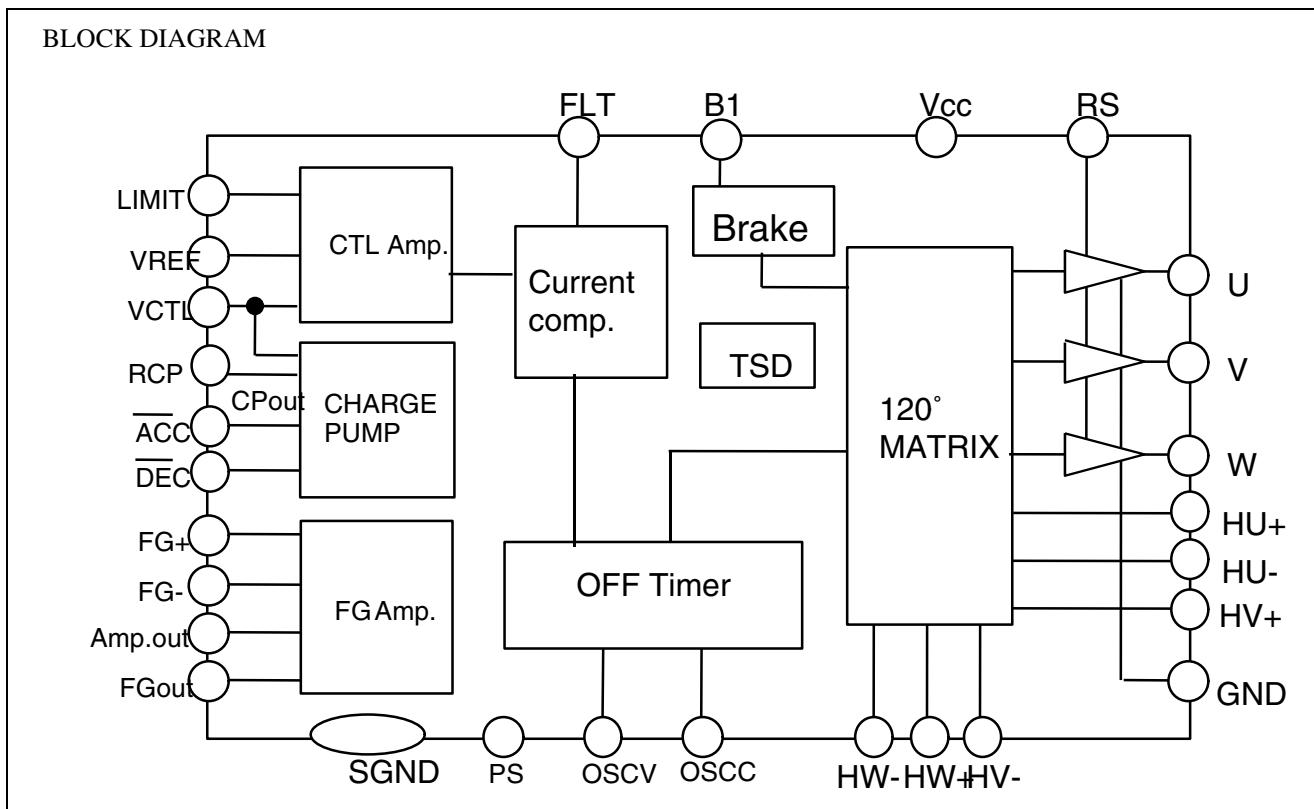

LBP etc.

PIN CONFIGURATION (TOP VIEW)

VCC	1		36	N.C.
RS	2		35	LIMIT
FLT	3		34	VREF

## Electrical Characteristics

(Ta=25°C, Vcc=24V unless otherwise noted)

SYMBOL	PARAMETERS	CONDITIONS	LIMITS			
			MIN.	TYP.	MAX.	UNIT
VREF	VREF output voltage	VREF=0A	2.0	2.5	3.0	V
VLIMIT	LIMIT output voltage	LIMIT=0A	2.7	3.4	4.1	V
VLIMIT2	LIMIT output voltage	VCC-RS voltage when VREF=LIMIT=OPEN	405	450	495	mV
VLIMIT3	LIMIT output voltage	VCC-RS voltage when VREF=OPEN, LIMIT=5V	540	600	660	mV
ILIMIT2	LIMIT output current	VREF=OPEN, LIMIT=OPEN VCC-RS =0.5Ω	810	900	980	mA
ILIMIT3	LIMIT output current	VREF=OPEN, LIMIT=5V VCC-RS =0.5Ω	1.08	1.20	1.32	A
VFGL	FGout output voltage at "Lo" function	Load current I=5mA	—	—	0.6	V
VGREF	FG Amp &Comp. reference voltage	Voltage on the Amp.out pin when shorted to the FG+ pin.	2.35	2.50	2.65	V
FGIN	FG +voltage input range	Voltage on the Amp.out pin when shorted to the FG+ pin.	1.0	—	5.5	V
AV	FG Amp. voltage gain	External resistors: 1.8 kΩ, 56 kΩ	29.5	31.1	32.7	times
AV20K	FG Amp. voltage gain at 20kHz	No load on Amp.out.  Voltage gain of the signal on Amp.out pin for an input 50-mVpp, 20-kHz AC signal on FG+. External resistors: 1.8 kΩ, 56 kΩ	22	27.6	32.7	times
VAmpout	Ampout voltage output range		1.0	—	5.2	V
IAmpout	Ampout sink current	Aout<=1.0V	4.0	—	—	mA
IFGout	FGout sink current	FGout<=1.0V	4.0	—	—	mA
HisH	FG Comp. high-side hysteresis voltage	Given a rising external voltage on Amp.out and VthH as the voltage at which FGout switches from high to low, hysteresis voltage HysH is defined as VthH-FGref. Voltage on FGin is 1 V (external resistors: 1.8 kΩ, 56 kΩ).	10.5	28.5	50.5	mV
HisL	FG Comp. Lo-side hysteresis voltage	Given a falling external voltage on Ampout and VthL as the voltage at which FGout switches from high to low, hysteresis voltage HysL is defined as FGref-VthL. Voltage on FGin is 1 V (external resistors: 1.8 kΩ, 56 kΩ).	10.5	28.5	50.5	mV
FGduty	FGComp. Duty 30kHz	Duty cycle of signal on FGout when a 50-mVpp, 30-kHz AC signal is input to FGin. External resistors: 1.8 kΩ, 56 kΩ.	40	50	60	%

## Electrical Characteristics

(Ta=25°C, Vcc=24V unless otherwise noted )

SYMBOL	PARAMETERS	REMARK	LIMITS			UNIT
			MIN.	TYP.	MAX.	
Toff	OFF Timer	OSCR=12.5kΩ, OSCC=1000pF	10	18	25	μsec

## Confirmend Parameters At Es Evaluation

SYMBOL	PARAMETERS	REMARK	LIMITS			UNIT
			MIN.	TYP.	MAX.	
TSD	Protection temperature		145	160	175	°C
ΔT	Temperature hysteresis		15	30	45	°C

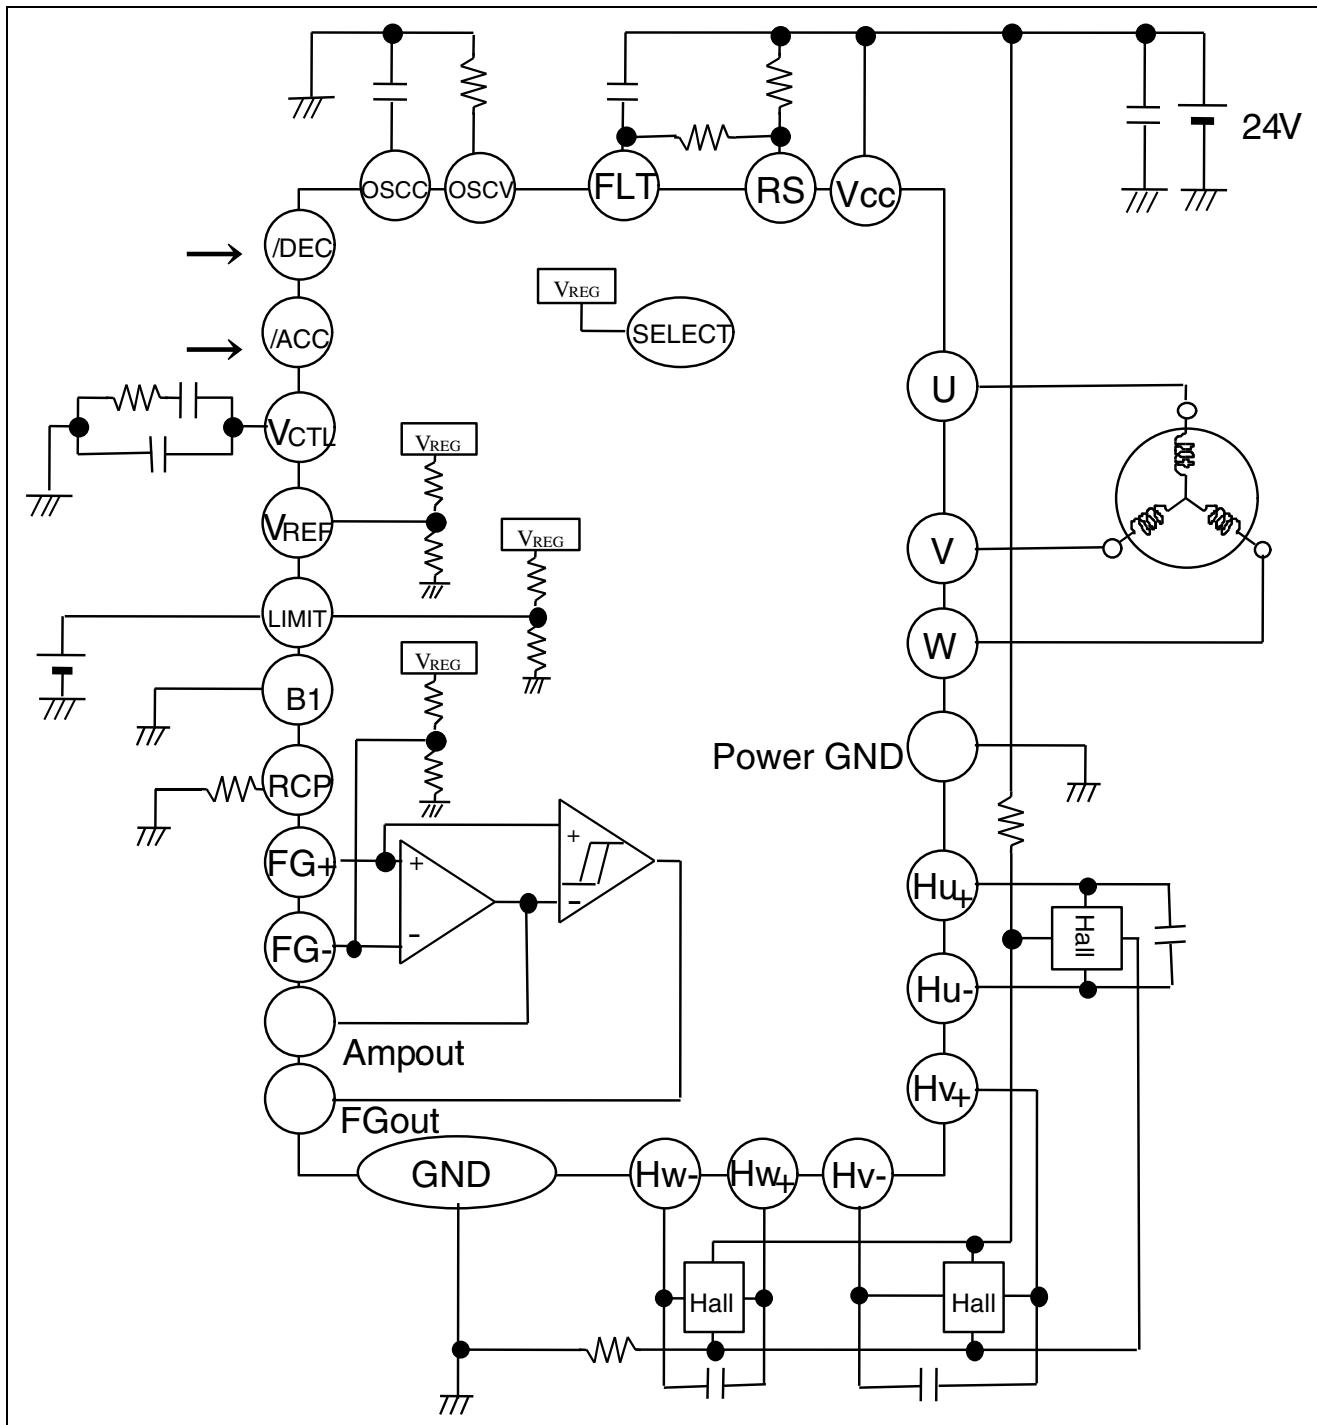

This devise does not guarantee the electrical function above TSD function temperature range.

The function is guaranteed under maximum junction temperature that is regulated in the

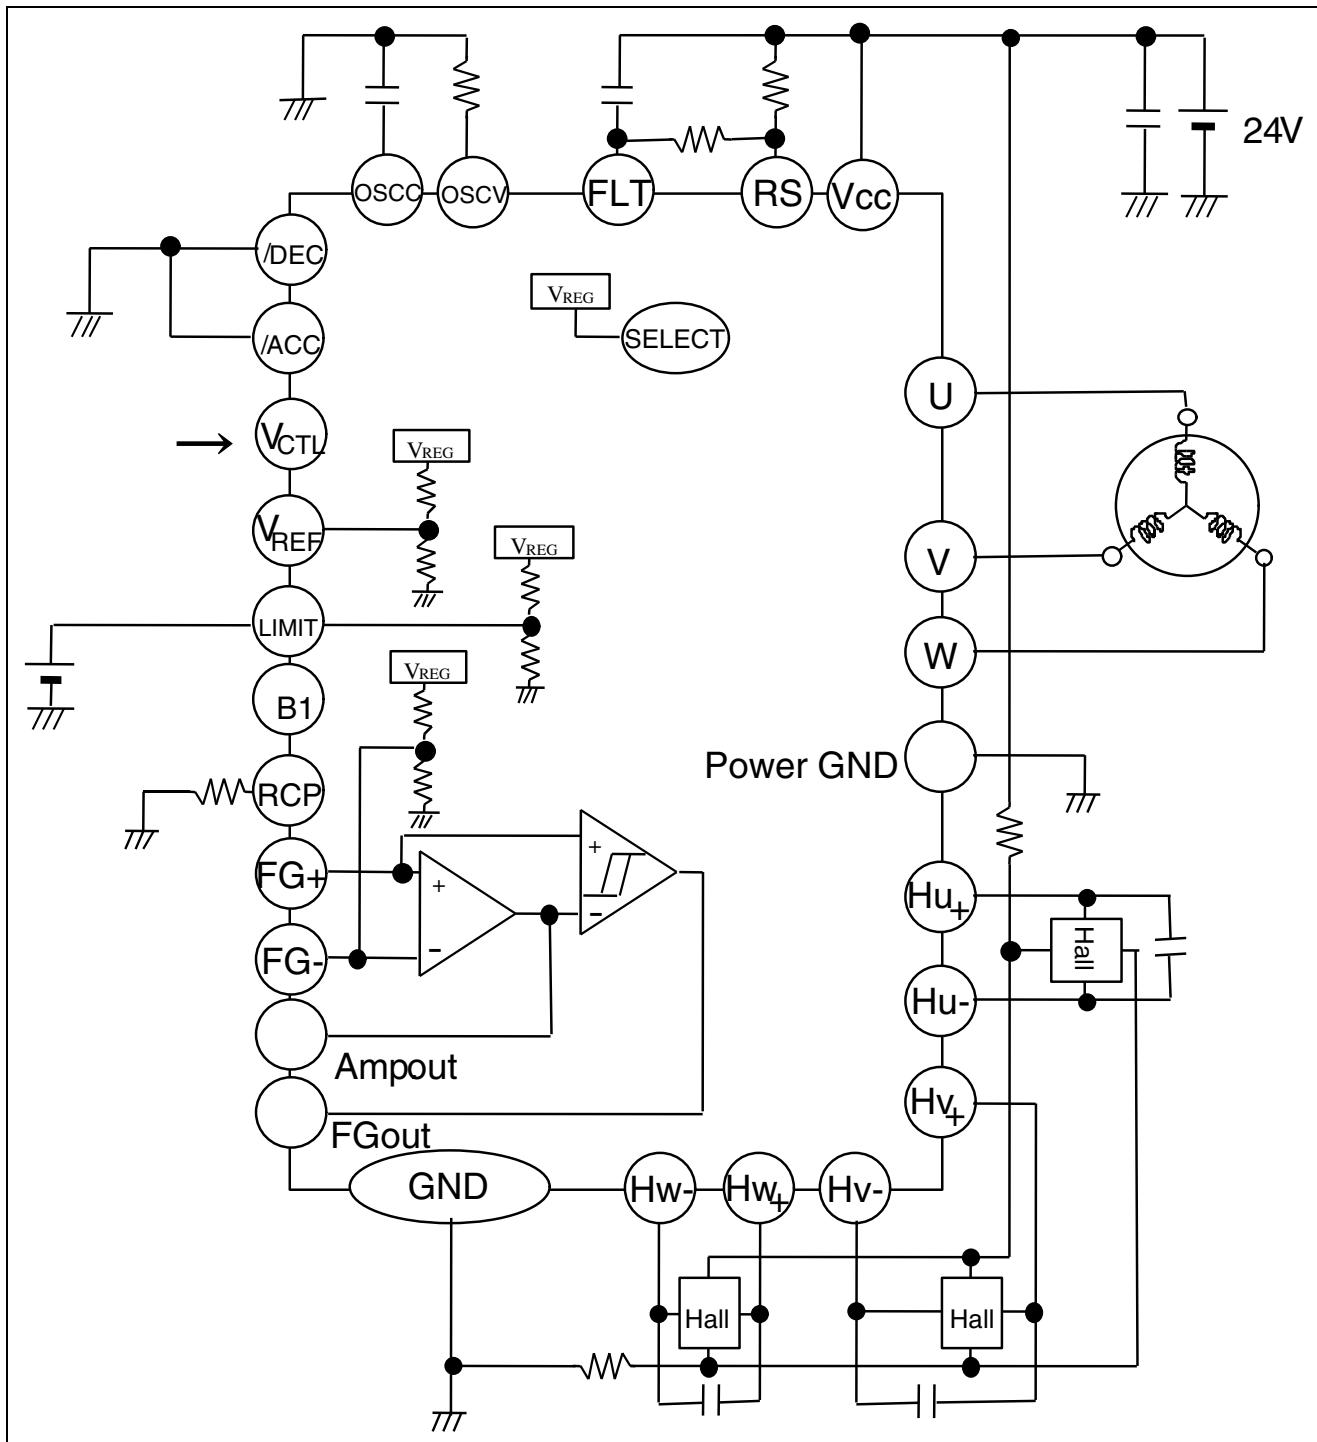

Absolute Maximum Rating, so TSD function is a protection circuit for unusual Tj when this devise is used over Tj 150°C.

Therefore, this devise must function under Tj maximum 150°C condition.

## Application Circuit (1)

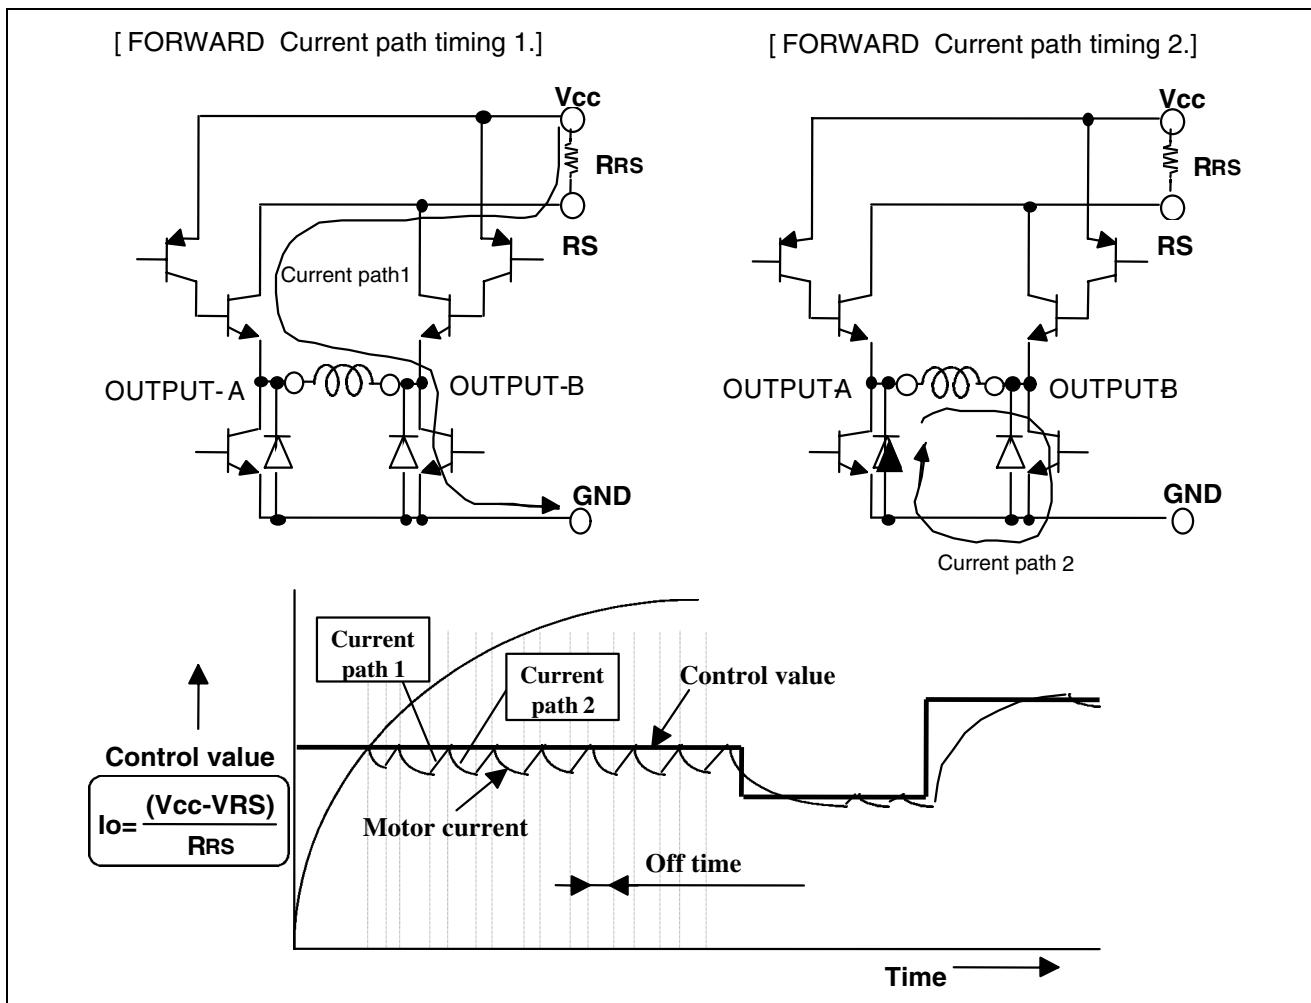

## Application Circuit (2)

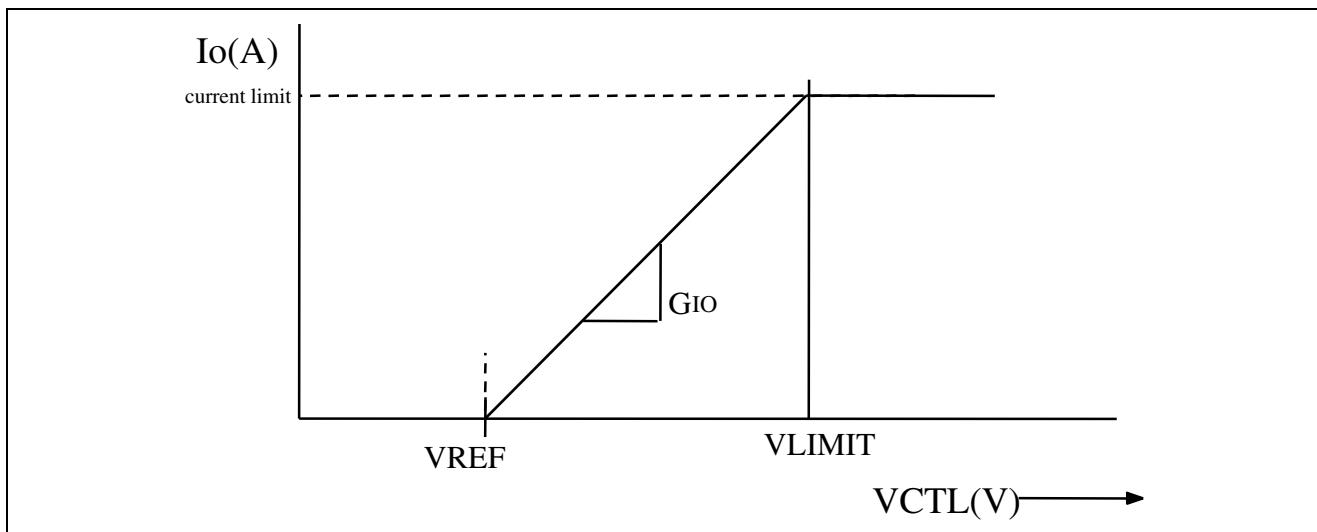

## PWM Function Description

Chopping PWM control is applied to supply driving current to the motor in proportion to the analog-voltage input.

This IC detects the flow of current to the motor and the power supply continues to supply current until it reaches a level specified in terms of the input voltage (current path 1). At that time, the output transistors are switched, and energy stored in the coil regenerates current for a period determined by the internal off-timer circuit (current path 2). When the timer reaches the specified value, the power supply again starts to supply current. Operation proceeds through repetition of these phases.

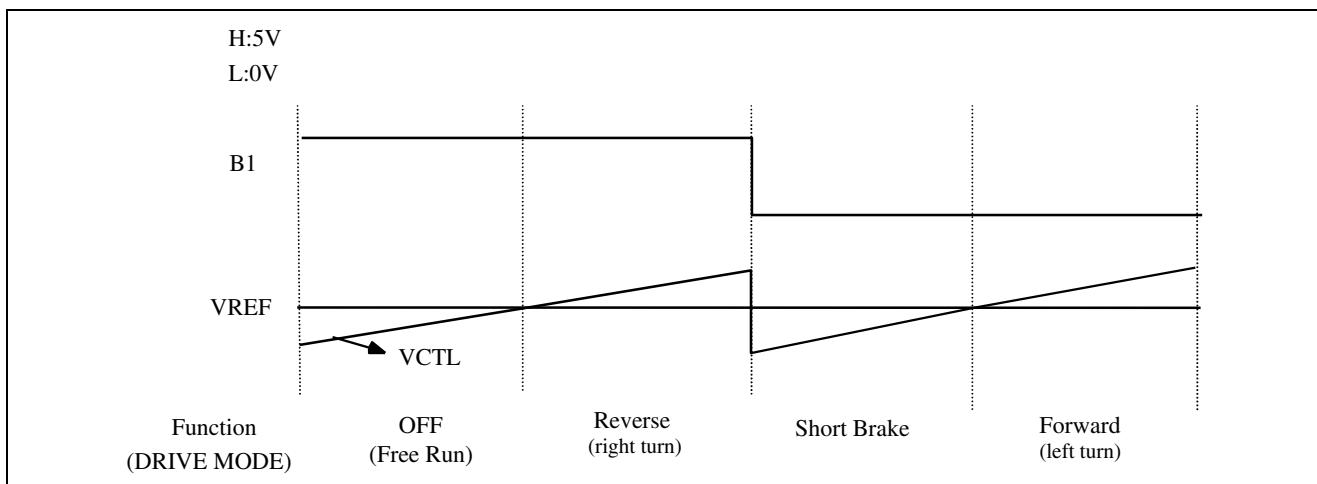

## VCTL vs Io Characteristics-1

## Drive Mode Function

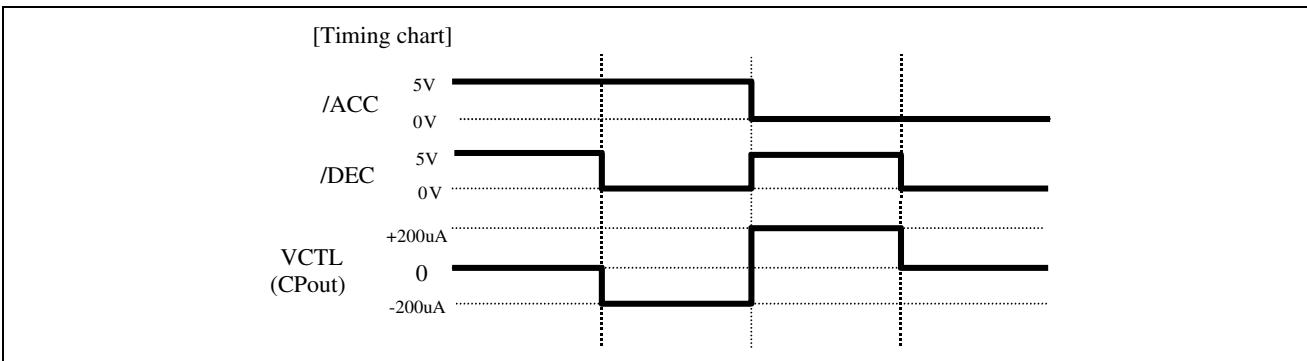

B1	Function
H	Reverse (right turn)
L or open	Forward (left turn) / short brake

Note: When the B1 pin of the M63154AFP is set low or left open-circuit, short braking operation is applied to the M63154AFP when the motor is turned off. When the B1 pin is fixed high (5 V), this operation is not applied. For directions of rotation in the table at left, see the timing chart on page 12.

## CHARGE PUMP FUNCTION

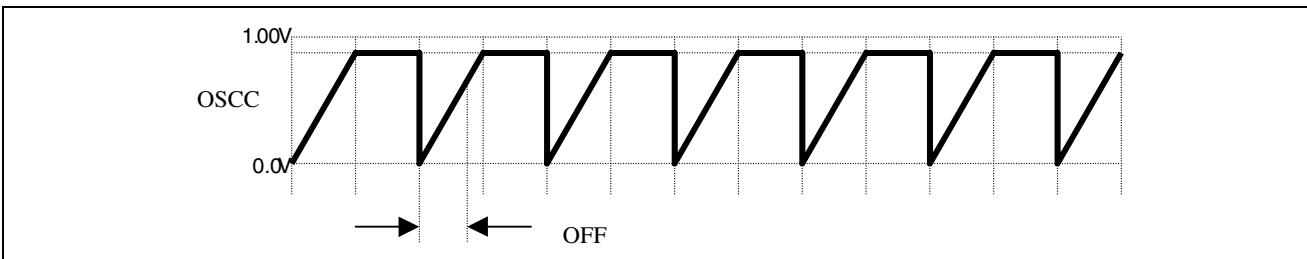

ACC	DEC	VCTL(CPout) output current	Function
H(5V)	H(5V)	0 $\mu$ A	Hold
H(5V)	L(0V)	-200 $\mu$ A	Deceleration
L(0V)	H(5V)	+200 $\mu$ A	Acceleration
L(0V)	L(0V)	0 $\mu$ A	Hold

## OSCC Connecta Output Voltage Function

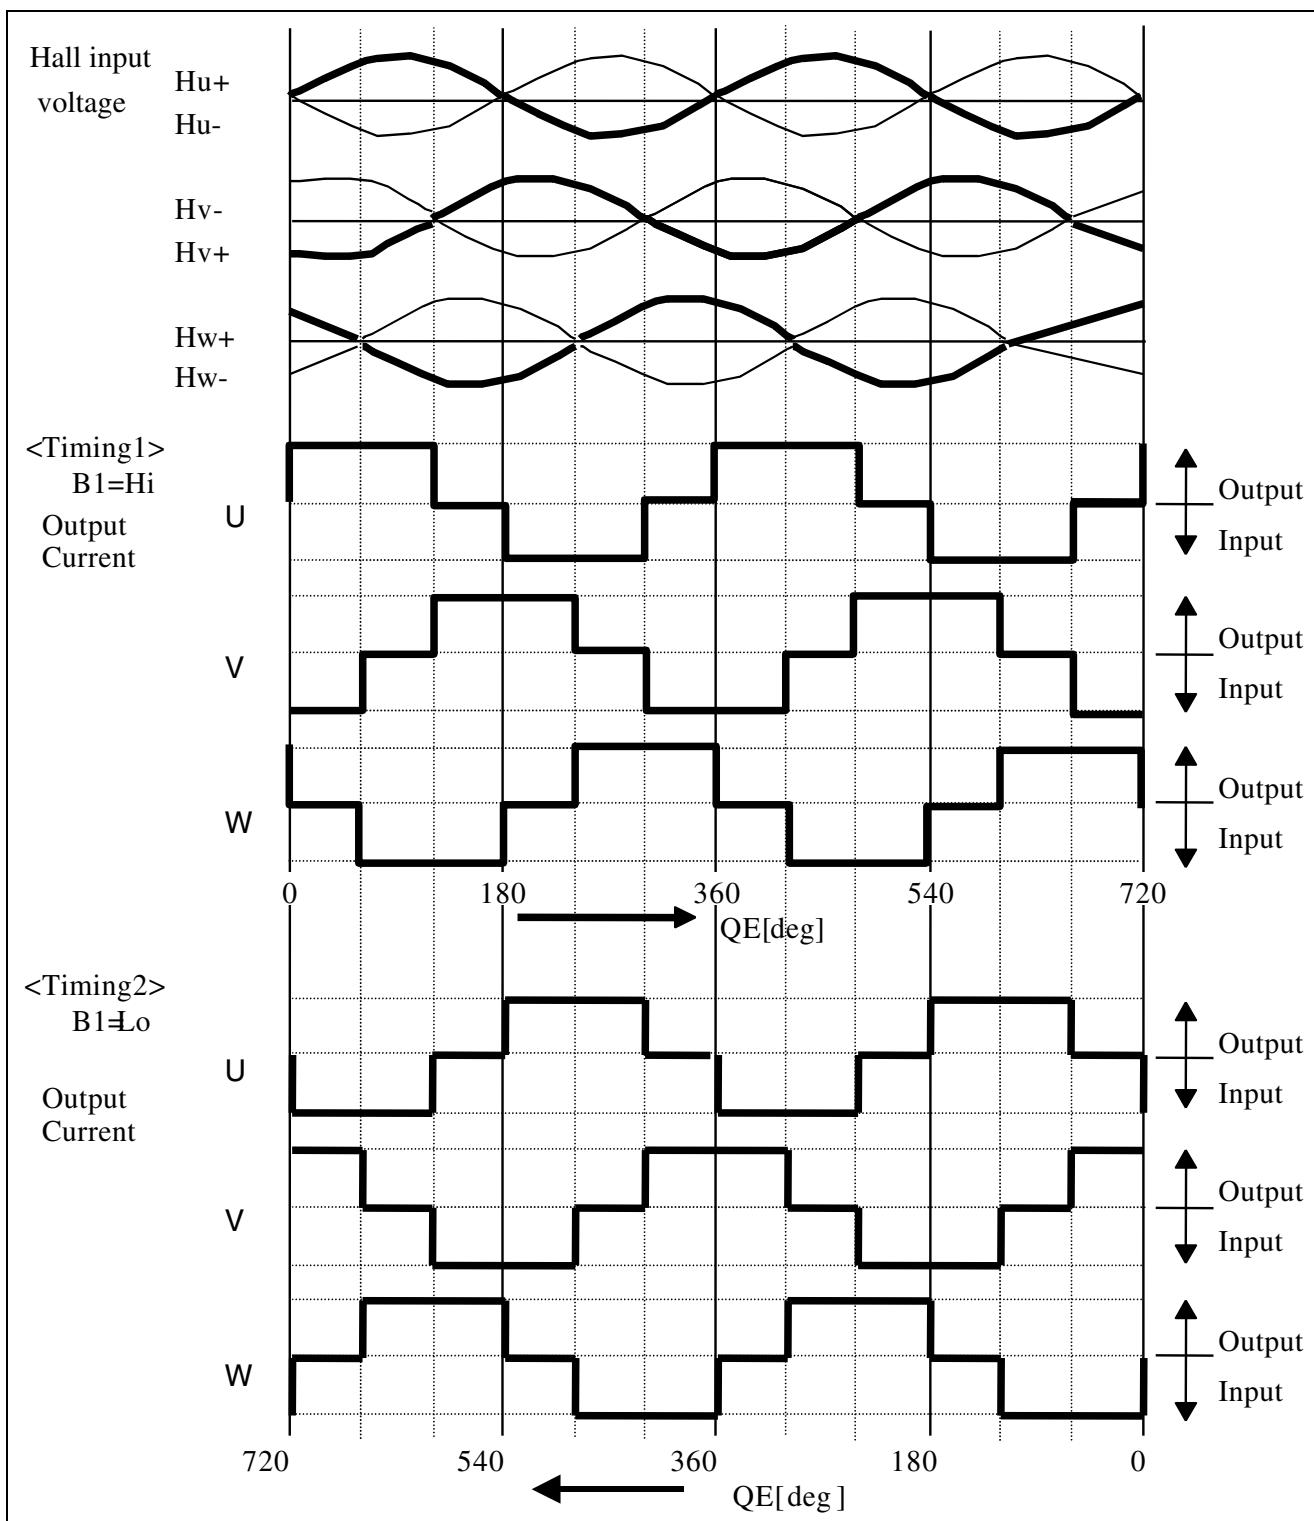

The OFF time of the current-chopper is determined by the capacitance connected to the OSCC pin and the resistance connected to the OSCR pin. The calculation is as follows:

$$T_{OFF} = 0.9 [V] \times C [F] / (1.25 [V] / 2R [k\Omega])$$

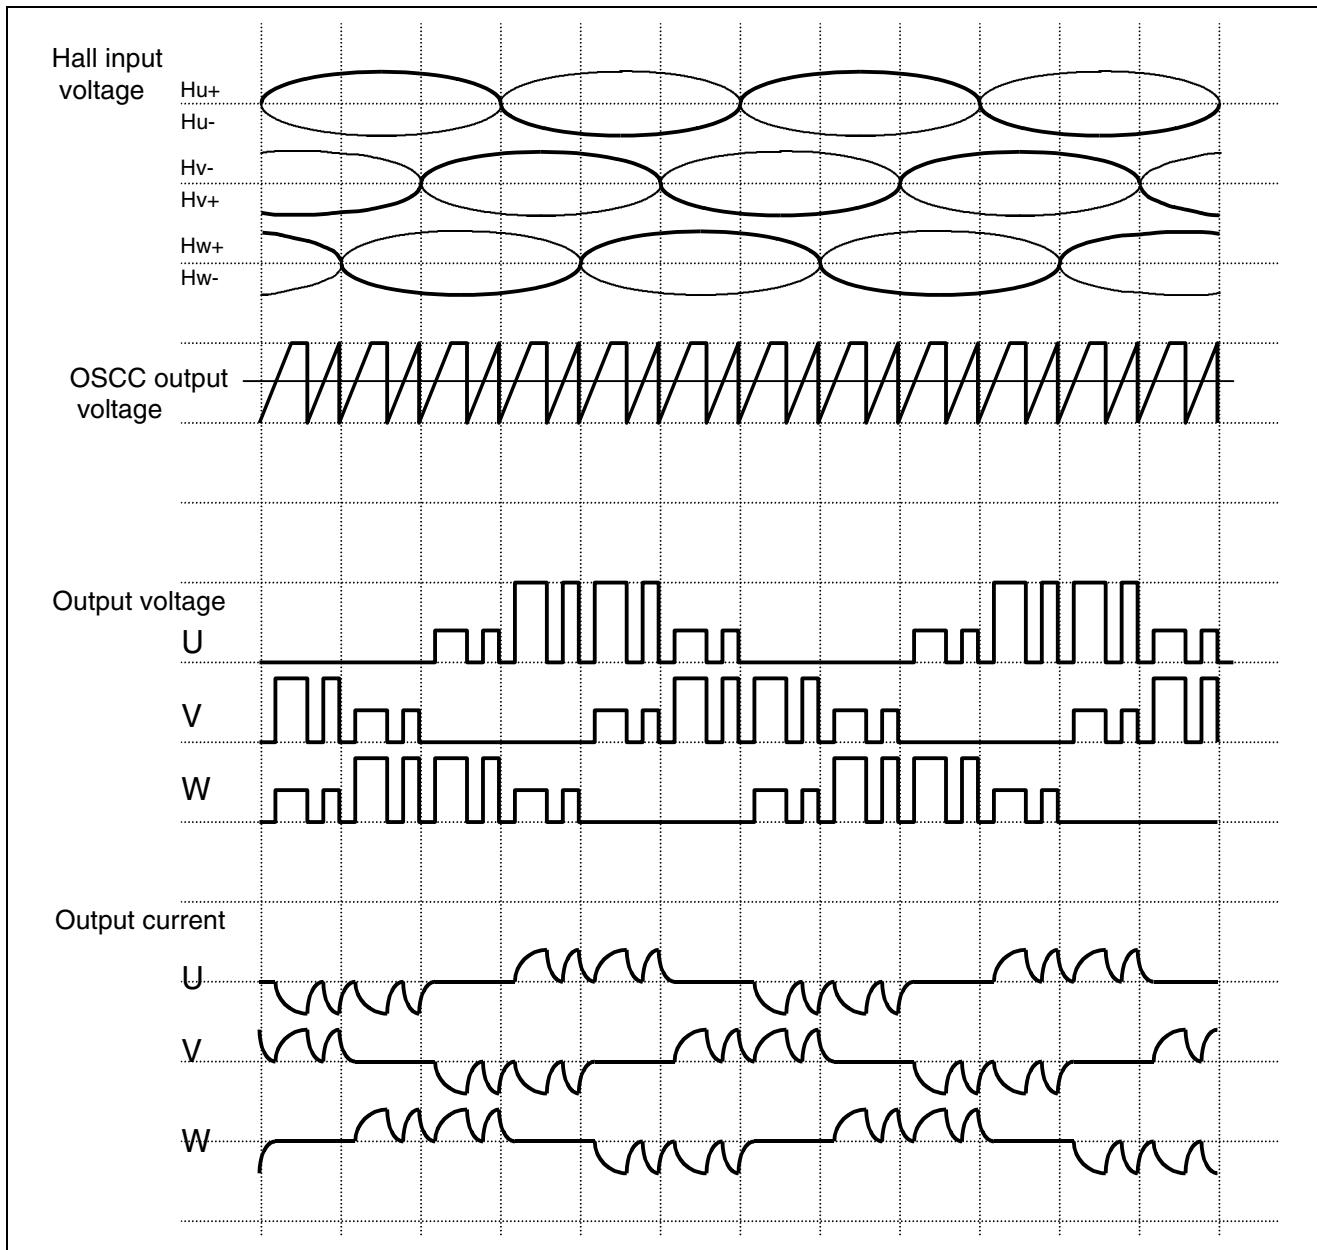

## Timing charts of motor output current and hall input voltage

Note: In the plots of Hall-sensor input, the bold curves are for (+).

Note: The waveforms given above merely demonstrate the timing and are not the same as the waveforms for the motor in operation.

## Timing Chart of Voltages on Individual Pins in PWM Control

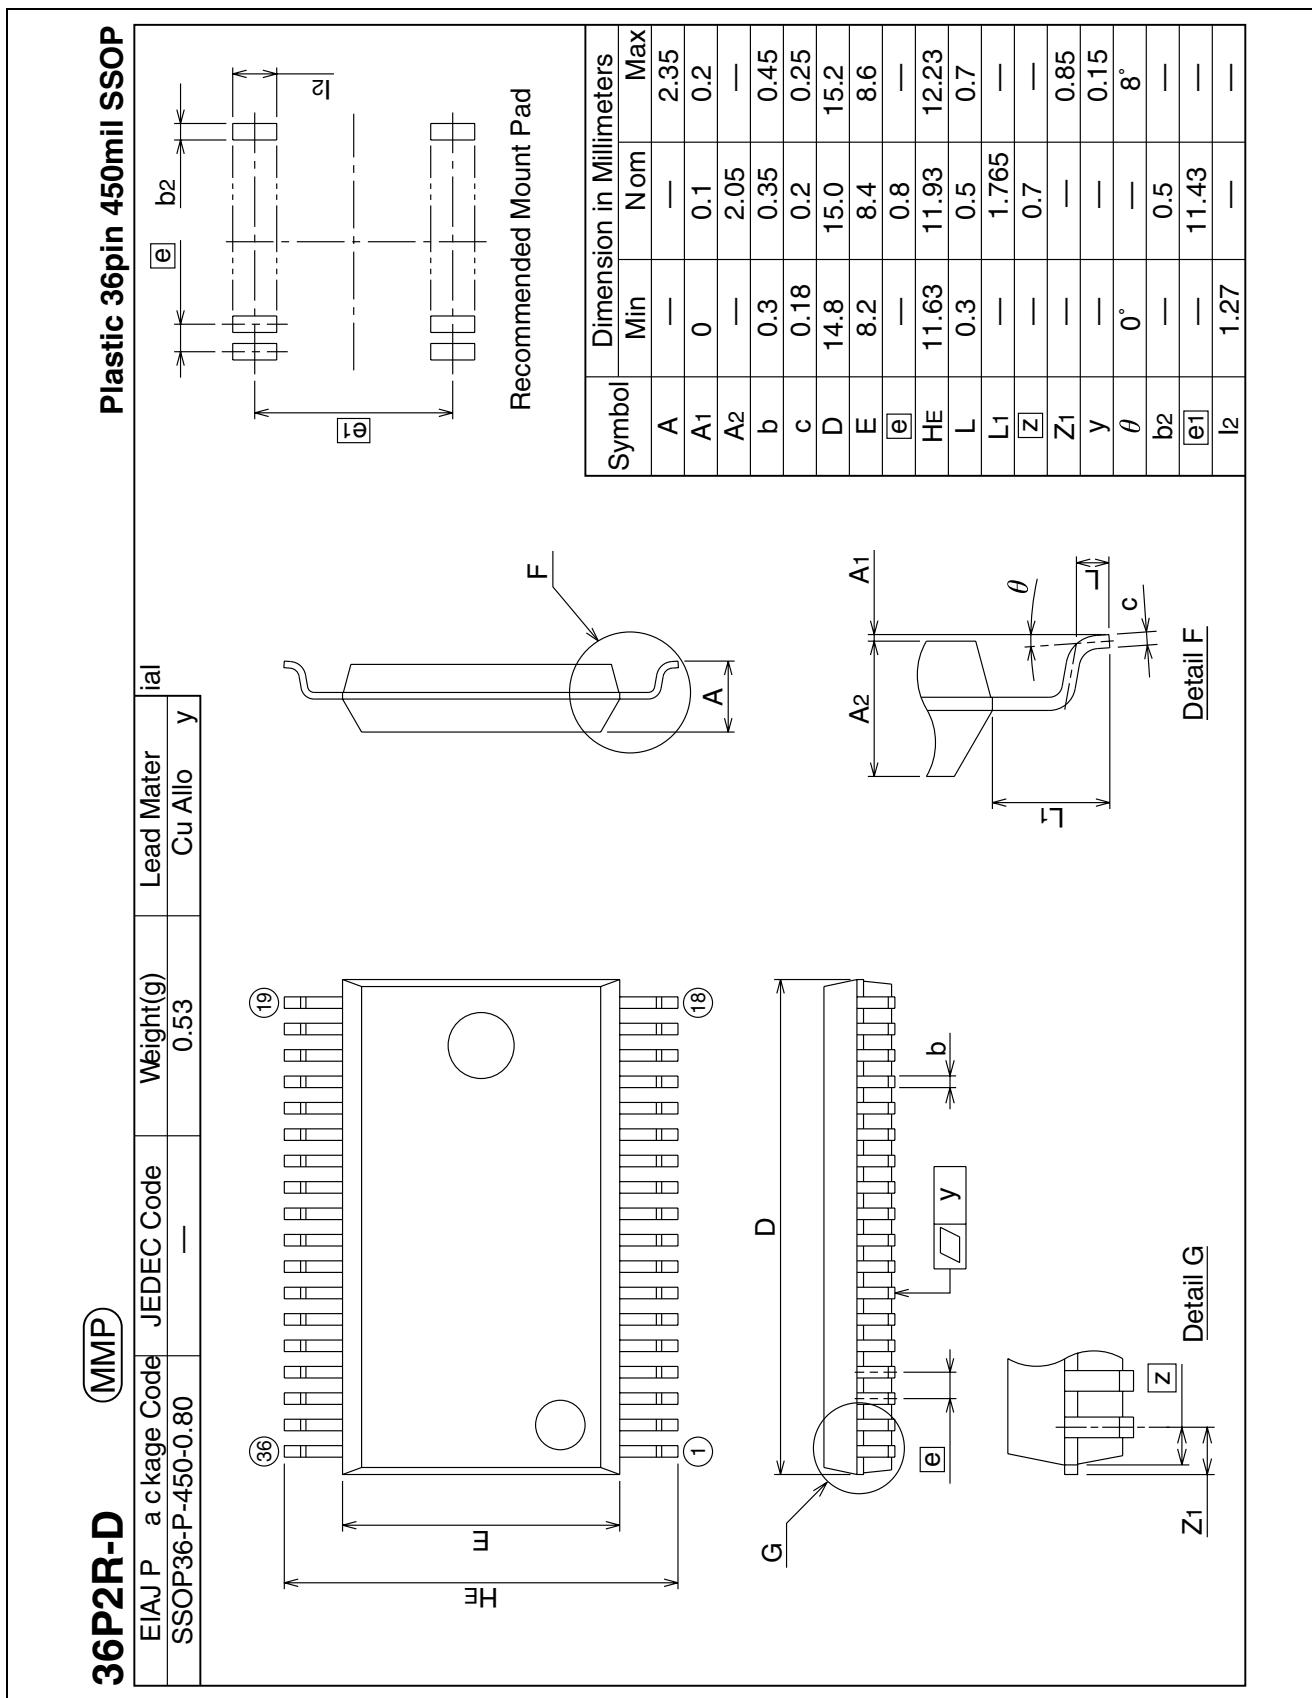

The current from the RS pin is detected at the FLT pin. This current reaching a value specified by the voltage on the VCTL pin indicates full discharge. After charging, the voltage on the OSCC pin (pin 23) sets the off-period for PWM current-chopping control.

Whenever a Hall input switches polarity, the voltage on the OSCC pin is temporarily reset to 0 V. While the voltage on the OSCC pin is 0.9 V or less, the PWM waveforms are off (regenerative operation). Otherwise, PWM waveforms are on.

The above timing chart shows the timing with which outputs for the motor are switched on and off during PWM control. Timing for the switching of outputs in response to Hall input varies with the setting of the B1 pin.

## Package Dimensions

Keep safety first in your circuit designs!

1. Renesas Technology Corp. puts the maximum effort into making semiconductor products better and more reliable, but there is always the possibility that trouble may occur with them. Trouble with semiconductors may lead to personal injury, fire or property damage.

Remember to give due consideration to safety when making your circuit designs, with appropriate measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or (iii) prevention against any malfunction or mishap.

Notes regarding these materials

1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corp. product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corp. or a third party.

2. Renesas Technology Corp. assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.

3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corp. without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor for the latest product information before purchasing a product listed herein.

The information described here may contain technical inaccuracies or typographical errors.

Renesas Technology Corp. assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.

Please also pay attention to information published by Renesas Technology Corp. by various means, including the Renesas Technology Corp. Semiconductor home page (<http://www.renesas.com>).

4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corp. assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.

5. Renesas Technology Corp. semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corp. or an authorized Renesas Technology Corp. product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.

6. The prior written approval of Renesas Technology Corp. is necessary to reprint or reproduce in whole or in part these materials.

7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.

Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.

8. Please contact Renesas Technology Corp. for further details on these materials or the products contained therein.
