

M51595FP PREAMPLIFIER FOR OPTICAL PICKUP

DESCRIPTION

The M51595FP is an optical pickup preamplifier for CD players. It has a built-in I-V amplifiers that convert current signals gained by photodetectors into voltage signals and HF (high frequency), FE (focus error), and TE (tracking error) amplifiers, as well as HFOK and MR circuits that output in logic level.

FEATURES

- For 3 laser system
- Capable of being driven by either single or dual power supply
- Built-in LPF ($f_c = 70\text{kHz}$) for TE and FE amplifiers to remove unwanted high-frequency components
- E-F balance control pin
- Built-in auto power controller (APC)
- Built-in microminiature 24-pin flat package (0.8mm lead pitch)
