### Description

Agilent's 5082-7300 series solid state numeric and hexadecimal indicators with on-board decoder/driver and memory provide 7.4 mm (0.29 inch) displays for reliable, low-cost methods of displaying digital information.

The 5082-7300 numeric indicator decodes positive 8421 BCD logic inputs into characters 0-9, a "-" sign, a test pattern, and four blanks in the invalid BCD states. The unit employs a right-hand decimal point.

### Package Dimensions

#### NOTES:

1. DIMENSIONS IN MILLIMETERS AND (INCHES).
2. UNLESS OTHERWISE SPECIFIED, THE TOLERANCE ON ALL DIMENSIONS IS  $\pm 0.38$  mm ( $\pm 0.015$  INCH).
3. DIGIT CENTER LINE IS  $\pm 0.25$  mm ( $\pm 0.01$  INCH) FROM PACKAGE CENTER LINE.

The 5082-7302 is the same as the 5082-7300, except that the decimal point is located on the left-hand side of the digit.

The 5082-7340 hexadecimal indicator decodes positive 8421 logic inputs into 16 states, 0-9 and A-F. In place of the decimal point

an input is provided for blanking the display (all LEDs off), without losing the contents of the memory. Applications include terminals and computer systems using the base-16 character set.

The 5082-7304 is a ( $\pm 1$ ) overrange display including a right-hand decimal point.

## Applications

Typical applications include point-of-sale terminals, instrumentation, and computer systems.
