Thick film rectangular

MCR006 (0201 size: 1/20W)

Features

1) Extremely small light

Area ratio is 60% smaller than that of chip 1005, while weight ratio has been cut 80%.

2) Highly reliable chip resistor

Ruthenium oxide dielectric offers superior resistance to the elements.

3) Electrodes not corroded by soldering

Thick film makes the electrodes very strong.

- 4) Flat surface further facilitates mounting
- 5) ROHM resistors have approved ISO-9001 certification.

Design and specifications are subject to change without notice. Carefully check the specification sheet supplied with the product before using or ordering it.

Ratings

Item	Conditions	Specifications 0.05W (1 / 20W) at 70°C		
Rated power	Power must be derated according to the power derating curve in Figure 1 when ambient temperature exceeds 70°C.			
Rated voltage	The voltage rating is calculated by the following equation. If the value obtained exceeds the limiting element voltage, the voltage rating is equal to the maximum operating voltage. $E: \text{Rated voltage (V)} \\ E=\sqrt{P\times R} \qquad P: \text{Rated power (W)} \\ R: \text{Nominal resistance } (\Omega)$			
Nominal resistance	See <u>Table 1.</u>			
Operating temperature		-55°C to +125°C

F (±1%)	10≤R≤10M (E24)	±250	

•Before using components in circuits where they will be exposed to transients such as pulse loads (short–duration, high– level loads), be certain to evaluate the component in the mounted state. In addition, the reliability and performance of this component cannot be guaranteed if it is used with a steady state voltage that is greater than its rated voltage.
