## **Quadruple Operational Amplifiers**

### **■ Overview**

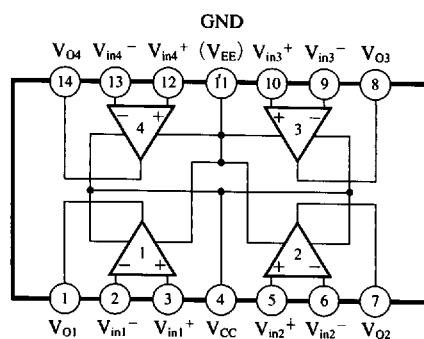

The AN1324 (AN6564) and the AN1324NS (AN6564NS) are quadruple operational amplifiers with phase compensation circuits built-in, and with wide range of operating voltages, allowing single power supply operation. They have electrical characteristics equal to the conventional operational amplifiers, and are low powered and suitable for application to various circuits.

### **■ Features**

- Built-in phase compensation circuit
- Wide range of common-mode input voltage  
0V to  $V_{CC} - 1.5V$
- Wide range of operating voltages  
Single supply : 3 to 30V  
Dual supply :  $\pm 1.5$  to 15V
