

## DOLBY PRO LOGIC SURROUND DECODER

### ■ GENERAL DESCRIPTION

The NJM2177 is a higher level integration and high quality audio performance monolithic IC designed for use in Dolby Pro Logic Surround System. The NJM2177 provides all the necessary function for a complete Pro Logic processor except time delay; Automatic input balance, noise sequencer, adaptive matrix, center mode control, and modified B-type noise reduction all on chip.

In addition to Dolby Pro Logic function including Dolby 3-stereo, this device provides two channel bypass mode and two special outputs used for other surround conveniently.

At two channel bypass mode, noise and distortion of NJM2177A are lower than that of NJM2177

(note) Dolby and the double-D symbol are trademarks of Dolby Laboratories Licensing Corporation, San Francisco, CA94103-4813, USA.

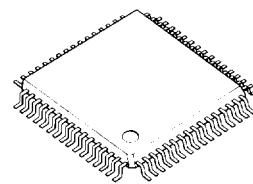

This device available only to licensees of Dolby Lab.

Licensing and application information may be obtained from Dolby Lab.

### ■ PACKAGE OUTLINE

NJM2177L/2177AL

NJM2177FB3/2177AFB3

### ■ FEATURES

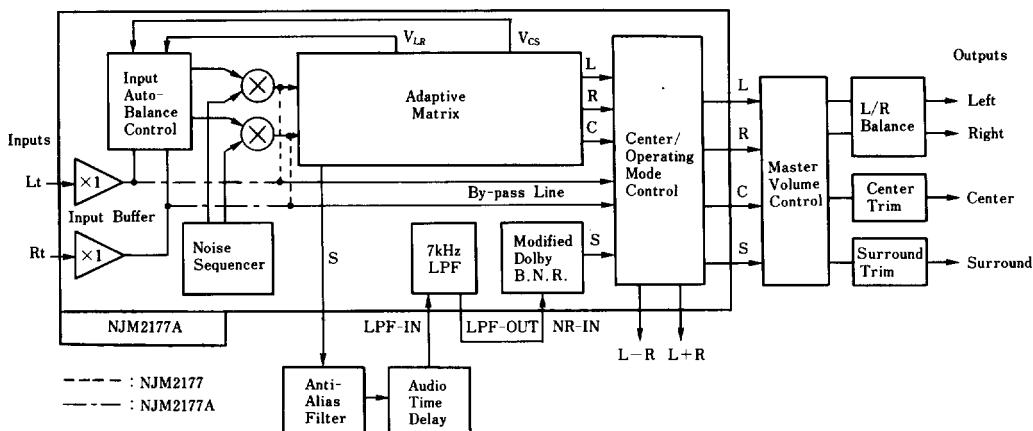

- Operating Voltage 9 to 13V
- Dolby operating level 300mVrms
- Lower Operating Current 34mA typ.
- Internal mode control switches
- Package SDIP-56, QFP-56, QFP-64

4

### ■ FUNCTIONS

- Auto input balance and buffer
- Noise sequencer; a Noise generator, a sequencer controlled by external two bits
- Adaptive Matrix
- Center mode control; ON/OFF, Normal/Phantom/Wideband
- Modified Dolby B Type Noise Reduction and OP amp. for 7kHz low-pass filter
- Operating mode control; 4ch(L,C,R), 3ch(L,C,R), 2ch(no processing)
- L + R and L - R output
