

CMOS 8-Bit Microcontroller

TMP88PS34N/F

The TMP88PS34 is the high-speed and high performance 8-bit signal chip microcomputers which built in a program storage area (64 Kbytes), an OSD font storage area (42 Kbytes) and the One-Time PROM of vector table storage area (256 bytes). The TMP88PS34 is pin compatible with the TMP88CS34. The operation possible with the TMP88PS34 can be performed by writing programs to PROM. The TMP88PS34 can write and verify in the same way as the TC571000D an EPROM programmer.

- For a discussion of how the reliability of microcontrollers can be predicted, please refer to Section 1.3 of the chapter entitled Quality and Reliability Assurance / Handling Precautions.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

Purchase of TOSHIBA I²C components conveys a license under the Philips I²C Patent Rights to use these components in an I²C system, provided that the system conforms to the I²C Standard Specification as defined by Philips.

Operational Description

The configuration and function of the TMP88PS34 are the same as those of the TMP88CS34, except in that a one-time PROM is used instead of an on-chip mask ROM.

1. Operation Mode

The TMP88PS34 has two mode: MCU and PROM.

1.1 MCU Mode

The MCU mode is activated by fixing the TEST/VPP pin at low level.

In the MCU mode, operation is the same as with the TMP88CS34.

1.1.1 Program Memory

The TMP88PS34 has a 64 Kbytes (addresses 04000H to 13EFFH in the MCU mode, addresses 10000H to 1FEFFH in the PROM mode) of program storage area, 42 Kbyte (addresses 20000H to 2A7FFH in the MCU mode, addresses 05800H to 0FFFFH in the PROM mode) and 256 byte (addresses FFF00H to FFFFFH in the MCU mode, addresses 1FF00H to 1FFFFH in the PROM mode) one-time PROM of vector table storage area.

1.1.2 Data Memory

The TMP88PS34 has an on-chip 1.5-Kbyte data memory (static RAM).

Electrical Characteristics

Absolute maximum ratings		(V _{SS} = 0 V)		
Parameter	Symbol	Pins	Ratings	Unit
Supply voltage	V _{DD}	–	–0.3 to 6.5	V
Programmable voltage	V _{PP}	TEST/V _{PP} pin	–0.3 to 13.0	
Input voltage	V _{IN}	–	–0.3 to V _{DD} + 0.3	
Output voltage	V _{OUT1}	–	–0.3 to V _{DD} + 0.3	
Output current (Per 1 pin)	I _{OUT1}	Ports P2, P3, P4, P5, P61 to P67, P7	3.2	mA
	I _{OUT2}	Ports P60	30	
Output current (Total)	Σ I _{OUT1}	Ports P2, P3, P4, P5, P61 to P67, P7	30	
	Σ I _{OUT2}	Ports P60	30	
Power dissipation [T _{opr} = 70°C]	PD	–	400	mW
Soldering temperature (time)	T _{sld}	–	260 (10 s)	°C
Storage temperature	T _{stg}	–	–55 to 125	
Operating temperature	T _{opr}	–	–30 to 70	

Note: The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.

Recommended operating conditions		(V _{SS} = 0 V, T _{opr} = −30 to 70 °C)					
Parameter	Symbol	Pins	Conditions		Min	Max	Unit
Supply voltage	V _{DD}	–	fc = 16 MHz	NORMAL mode	4.5	5.5	V
			fc = 16 MHz	IDLE mode			
			–	STOP mode			
Input high voltage	V _{IH1}	Except hysteresis input	V _{DD} = 4.5 to 5.5V		V _{DD} × 0.70	V _{DD}	
	V _{IH2}	Hysteresis input			V _{DD} × 0.75		
	V _{IH3}	Key-on Wake-up input			V _{DD} × 0.90		
Input low voltage	V _{IL1}	Except hysteresis input	V _{DD} = 4.5 to 5.5V		0	V _{DD} × 0.30	
	V _{IL2}	Hysteresis input				V _{DD} × 0.25	
	V _{IL3}	Key-on Wake-up input				V _{DD} × 0.65	
Clock frequency	fc	XIN, XOUT	V _{DD} = 4.5 to 5.5V		8.0	16.0	MHz
	f _{OSC}	Internal clock	V _{DD} = 4.5 to 5.5V	fc = 8 MHz	8.0	12.0	
				fc = 16 MHz	16.0	24.0	

Note 1: The recommended operating conditions for a device are operating conditions under which it can be guaranteed that the device will operate as specified. If the device is used under operating conditions other than the recommended operating conditions (supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating conditions for the device are always adhered to.

Note 2: Clock frequency fc: Supply voltage range is specified in NORMAL mode and IDLE mode.

Note 3: Smaller value is alternatively specified as the maximum value.

Oscillation for OSD

The frequency generated in LC oscillation can be obtained using the following equations.

$$f = \frac{1}{2\pi\sqrt{LC}}, C = \frac{C_1 \cdot C_2}{C_1 + C_2}$$

C₁ is not fixed at a constant value. It can be changed to tune into the desired frequency.

Note 1: Toshiba's OSD circuit determines a horizontal display start position by counting clock pulses generated in LC oscillation. For this reason, the OSD circuit may fail to detect clock pulses normally, resulting in the horizontal start position becoming unstable, at the beginning of oscillation, if the oscillation amplitude is low.

Changing L and C₂ from the values recommended for a specific frequency may hamper a stable OSD display.

If the LC oscillation frequency is the same as a high-frequency clock value, the oscillation of the high-frequency oscillator may cause the LC oscillation frequency to fluctuate, thus making OSD displays flicker.

When determining these parameters, please check the oscillation frequency and the stability of oscillation on your TV sets.

Also check the determined parameters on your final products, because the optimum parameter values may vary from one product to another.

Note 2: When using the LSI package in a strong electric field, such as near a CRT, electrically shield the package so that its normal operation can be maintained.

High-speed Programming Timing

Note 1: When Vcc power supply is turned on or after, Vpp must be increased.

When Vcc power supply is turned off or before, Vpp must be increased.

Note 2: The device must not be set to the EPROM programmer or picked up from it under applying the program voltage ($12.75\text{ V} \pm 0.25\text{ V}$) to the Vpp pin as the device is damaged.

Note 3: Be sure to execute the Recommended programming mode with the Recommended programming adaptor. If a mode or an adaptor except the above, the misoperation sometimes occurs.
