

LMV321

General Purpose, Low Voltage, Rail-to-Rail Output Amplifier

Features at +2.7V

- 80 μ A supply current
- 1.2MHz gain bandwidth product
- Output voltage range: 0.01V to 2.69V
- Input voltage range: -0.25V to +1.5V
- 1.5V/ μ s slew rate
- Competes with other industry standard LMV321 amplifiers
- Package options (SC70-5 and SOT23-5)
- Fully specified at +2.7V and +5V supplies

Applications

- Low cost general purpose applications
- Cellular phones
- Personal data assistants
- A/D buffer
- DSP interface
- Smart card readers
- Portable test instruments
- Keyless entry
- Infrared receivers for remote controls
- Telephone systems
- Audio applications

Typical Application

Description

The LMV321 is a low cost, voltage feedback amplifier that consumes only 80 μ A of supply current. The LMV321 is designed to operate from 2.7V (± 1.35 V) to 5.5V (± 2.75 V) supplies. The common mode voltage range extends below the negative rail and the output provides rail-to-rail performance.

The LMV321 is designed on a CMOS process and provides 1.2MHz of bandwidth and 1.5V/ μ s of slew rate at a low supply voltage of 2.7V. The combination of low power, rail-to-rail performance, low voltage operation, and tiny package options make the LMV321 well suited for use in personal electronics equipment such as cellular handsets, pagers, PDAs, and other battery powered applications.
