

M/A-COM 1.2-3.2 GHz 1.2W Power Amplifier**MAAPGM0036****MAAPGM0036****Features**

- ◆ 1.2 Watt Saturated Output Power Level
- ◆ Variable Drain Voltage (4-10V) Operation
- ◆ Self-Aligned MSAG[®] Process

Primary Applications

- ◆ 2.5-2.7 GHz MMDS
- ◆ GPS
- ◆ Radar
- ◆ Telemetry

Description

The MAAPGM0036 is a packaged, 2-stage, 1.2 W power amplifier with on-chip bias networks in a bolt down ceramic package, allowing easy assembly. This product is fully matched to 50 ohms on both the input and output. It can be used as a power amplifier stage or as a driver stage in high power applications.

Each device is 100% RF tested to ensure performance compliance. The part is fabricated using M/A-COM's GaAs Multifunction Self-Aligned Gate (MSAG[®]) MESFET Process. M/A-COM's MSAG process features robust silicon-like manufacturing processes, planar processing of ion implanted transistors and multiple implant capability enabling power, low-noise, switch and digital FETs on a single chip. The use of refractory metals and the absence of platinum in the gate metal formulation prevents hydrogen poisoning when employed in hermetic packaging.

3. Adjust V_{GG} between -2.4 to -1.5V to achieve indicated I_{DQ} .

Operating Instructions

This device is static sensitive. Please handle with care. To operate the device, follow these steps.

1. Apply $V_{GG} \approx -1.8\text{V}$, $V_{DD} = 0\text{ V}$.
2. Ramp V_{DD} to desired voltage, typically 8 V.
3. Adjust V_{GG} to set I_{DQ} , (See Note 3 above).
4. Set RF input.
5. Power down sequence in reverse. Turn V_{GG} off last.

**Assembly Instructions:**

This flange mount style package provides a robust interface between a highly integrated GaAs MMIC device and a circuit board which may be assembled using conventional surface mount techniques. A thin shim made of a thermally and electrically conductive, ductile material should be used prior to installation of the CR-15 to improve the thermal and electrical performance of the package to housing interface. Refer to **M/A-COM Application Note #M567*** for more information.

For applications where surface mount components are to be installed after the CR-15 installation, this package will not be damaged when subjected to typical convection or IR oven reflow profiles. Refer to **M/A-COM Application Note #M538*** for maximum allowable reflow time and temperature. Alternatively, the package leads may be individually soldered. Whether an iron or hot gas soldering equipment is used, care should be taken to insure that the temperature is well controlled and electric static discharge (ESD) safe.

* Application Notes can be found by going to the Site Search Page on M/A-COM's web page (<http://www.macom.com/search/search.jsp>) and searching for the required Application Note.

Biasing Notes:

- ◆ The 100pF bypass capacitors must be placed as close to the V_{GG} and V_{DD} pins as possible (recommended < 100 mils).
- ◆ A negative bias must be applied to V_{GG} before applying a positive bias to V_{DD} to prevent damage to the amplifier.
