 Original Creation Date: 05/04/95
 Last Update Date: 02/17/97
 Last Major Revision Date: 05/04/95

LOW POWER LOW OFFSET VOLTAGE DUAL COMPARATORS

General Description

The LM193 consists of two independent precision voltage comparators which were designed specifically to operate from a single power supply over a wide range of voltages. Operation from split power supplies is also possible and the low power supply current drain is independent of the magnitude of the power supply voltage. These comparators also have a unique characteristic in that the input common-mode voltage range includes ground, even though operated from a single power supply voltage.

Application areas include limit comparators, simple analog to digital converters; pulse, squarewave and time delay generators; wide range VCO; MOS clock timers; multivibrators and high voltage digital logic gates. The LM193 was designed to directly interface with TTL and CMOS. When operated from both plus and minus power supplies, the LM193 will directly interface with MOS logic where their low power drain is a distinct advantage over standard comparators.

Industry Part Number

LM193

NS Part Numbers

 JL193BGA
 JL193BPA

Prime Die

LM193

Controlling Document

38510/11202, AMEND. 2 REV A

Processing

MIL-STD-883, Method 5004

Quality Conformance Inspection

MIL-STD-883, Method 5005

Subgrp	Description	Temp (°C)
1	Static tests at	+25
2	Static tests at	+125
3	Static tests at	-55
4	Dynamic tests at	+25
5	Dynamic tests at	+125
6	Dynamic tests at	-55
7	Functional tests at	+25
8A	Functional tests at	+125
8B	Functional tests at	-55
9	Switching tests at	+25
10	Switching tests at	+125
11	Switching tests at	-55

- Wide supply voltage range 5.0Vdc to 36Vdc
 $\pm 2.5\text{Vdc}$ to $\pm 18\text{Vdc}$
- Very low supply current drain (0.4mA Typ)
independent of supply voltage
- Low input biasing current 25nA Typ
- Low input offset current +3nA Typ
and maximum offset voltage +5mV Max (25 C)
- Input common-mode voltage range includes ground
- Differential input voltage range
equal to the power supply voltage
- Low output saturation voltage 250mV at 4mA Typ
- Output voltage compatible with TTL,
DTL, ECL, MOS and CMOS logic systems

(Absolute Maximum Ratings)

Supply Voltage, V+	36Vdc or ± 18 Vdc
Differential Input Voltage (Note 3)	36V
Output Voltage	36V
Input Voltage	-0.3V to +36V
Input Current ($V_{in} < -0.3$ Vdc) (Note 2)	50mA
Power Dissipation	
METAL CAN	330mW at $T_A = 125^\circ\text{C}$
CERDIP	400mW at $T_A = 125^\circ\text{C}$
Maximum Junction Temperature	175 $^\circ\text{C}$
Output Short-Circuit to GND (Note 1)	Continuous
Operating Temperature Range	-55 $^\circ\text{C}$ to +125 $^\circ\text{C}$
Thermal Resistance	
θ_{JA}	
CERDIP	
(Still Air)	146 $^\circ\text{C/W}$
(500 LF/Min Air Flow)	85 $^\circ\text{C/W}$
METAL CAN	
(Still Air)	174 $^\circ\text{C/W}$
(500 LF/Min Air Flow)	99 $^\circ\text{C/W}$
θ_{JC}	
CERDIP	33 $^\circ\text{C/W}$
METAL CAN	44 $^\circ\text{C/W}$
Storage Temperature Range	-65 $^\circ\text{C}$ to +150 $^\circ\text{C}$
Soldering Information	
Soldering, (10 seconds)	260 $^\circ\text{C}$
ESD Tolerance (Note 4)	500V

- Note 1: Short circuits from the output to V+ can cause excessive heating and eventual destruction. When considering short circuits to ground, the maximum output current is approximately 20mA independent of the magnitude of V+.
- Note 2: This input current will only exist when the voltage at any of the input leads is driven negative. It is due to the collector-base junction of the input PNP transistors becoming forward biased and thereby acting as input diode clamps. In addition to this diode action, there is also lateral NPN parasitic transistor action on the IC chip. This transistor action can cause the output voltages of the comparators to go to the V+ voltage level (or to ground for a large overdrive) for the time duration that an input is driven negative. This is not destructive and normal output states will re-establish when the input voltage, which was negative, again returns to a value greater than -0.3Vdc.
- Note 3: Positive excursions of input voltage may exceed the power supply level. As long as the other voltage remains within the common-mode range, the comparator will provide a proper output state. The low input voltage state must not be less than -0.3Vdc (or 0.3Vdc below the magnitude of the negative power supply, if used).
- Note 4: Human body model, 1.5K Ohms in series with 100pF.
