Hex Differential Line Receiver

The MC10EP116/100EP116 is a 6-bit differential line receiver based on the EP16 device. The 3.0GHz bandwidth provided by the high frequency outputs makes the device ideal for buffering of very high speed oscillators.

A V_{BB} pin is available to AC couple an input signal to the device. More information on AC coupling can be found in the design handbook interfacing with ECLinPS on our website.

The design incorporates two stages of gain, internal to the device, making it an excellent choice for use in high bandwidth amplifier applications.

The differential inputs have internal clamp structures which will force the Q output of a gate in an open input condition to go to a LOW state. Thus, inputs of unused gates can be left open and will not affect the operation of the rest of the device. Note that the input clamp will take affect only if both inputs fall 2.5V below V_{CC}. All V_{CC} and V_{EE} pins must be externally connected to power supply to guarantee proper operation.

- 230ps Typical Propagation Delay
- High Bandwidth to 3.0 GHz Typical
- PECL mode: 3.0V to 5.5V V_{CC} with V_{EE} = 0V
- ECL mode: 0V V_{CC} with V_{EE} = –3.0V to –5.5V
- Internal Input Resistors: Pulldown on D, Pulldown and Pullup on $\overline{D}$
- Q Output will default LOW with inputs open or at V_{EE}
- ESD Protection: 2KV HBM, 100V MM
- V_{BB} Output
- New Differential Input Common Mode Range
- Moisture Sensitivity Level 2
  For Additional Information, See Application Note AND8003/D
- Flammability Rating: UL–94 code V–0 @ 1/8”,
  Oxygen Index 28 to 34
- Transistor Count: 729 devices
