■ Pin Descriptions

Pin No.	Symbol	Description
1	GATE	MOS FET gate pin
2	CI	Oscillation-prevention capacitor connection pin. Connect a capacitor between gate and this pin.
3	VM1	Input-voltage detection pin. Apply the input voltage after deviding with resistor.
4	COM	GND pin
5	V _{IN}	Output-MOS FET source-pin. Connect the current detection resistor between this and No.6 pin.
6	SENS	Current detection pin. Apply the AC voltage after rectification.
7	VL1	Output voltage detection pin. Apply the output voltage after deviding with the resistor.
8	CM1	Output-MOS FET drain pin. The diode is connected between this pin and output capacitor to allow the current flow from the capacitor to MOS FET-drain only.
