VERY HIGH LEVEL DIGITAL DRIVER

0008**FEATURES:**

- Single Supply Operation From 10V to 45V
- Replaces NH/DH0008
- 'And' Input Logic With Expander
- External Transition Time Control
- Output Current to 3A Peak
- Available to DSCC SMD 5962-87617

MIL-PRF-38534 QUALIFIED**MSK0008**

The MSK 0008 is an integrated high voltage, high current driver designed to accept standard DTL or TTL logic levels and drive a pulsed load of up to 3A at 28V. AND inputs are provided along with an Expander connection, should additional gating be required. The addition of an external capacitor and resistor provides control of the rise and fall times of the output. The device is packaged in a hermetic 10 pin can.
