description

The TM2SR72EPN is a 16M-byte, 168-pin dual-in-line memory module (DIMM). The DIMM is composed of nine TMS626812ADGE, 2097152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic thin small-outline package (TSOP) mounted on a substrate with decoupling capacitors. See the TMS626812A data sheet (literature number SMOS691).

The TM4SR72EPN is a 32M-byte, 168-pin DIMM. The DIMM is composed of eighteen TMS626812ADGE, 2097152 x 8-bit SDRAMs, each in a 400-mil, 44-pin plastic TSOP mounted on a substrate with decoupling capacitors. See the TMS626812A data sheet (literature number SMOS691).

operation

The TM2SR72EPN operates as nine TMS626812ADGE devices that are connected as shown in the TM2SR72EPN functional block diagram. The TM4SR72EPN operates as eighteen TMS626812ADGE devices connected as shown in the TM4SR72EPN functional block diagram.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

PRODUCTION DATA information is current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

- NOTES:
3. All specifications apply to the device after power-up initialization. All control and address inputs must be stable and valid.
 4. Control, DQ, and address inputs change state only twice during t_{RC}.
 5. Control, DQ, and address inputs change state only once every 30 ns.
 6. Control, DQ, and address inputs do not change (stable).
 7. Control, DQ, and address inputs change only once every cycle.

[†] All references are made to the rising transition of CKx, unless otherwise noted.

[‡] Specifications in this table represent a single SDRAM device.

NOTES: 8. t_{AC} is referenced from the rising transition of CK that is previous to the data-out cycle. For example, the first data out t_{AC} is referenced from the rising transition of CKx that is CAS latency – one cycle after the READ command. Access time is measured at output reference level 1.4 V.

9. t_{LZ} is measured from the rising transition of CKx that is CAS latency – one cycle after the READ command.

10. t_{HZ} MAX defines the time at which the outputs are no longer driven and is not referenced to output voltage levels.

11. For read or write operations with automatic deactivate, t_{RCD} must be set to satisfy minimum t_{RAS}.

12. Transition time, t_T, is measured between V_{IH} and V_{IL}.

serial presence detect

The serial presence detect (SPD) is contained in a 2K-bit serial EEPROM located on the module. The SPD nonvolatile EEPROM contains various data such as module configuration, SDRAM organization, and timing parameters (see tables below). Only the first 128 bytes are programmed by Texas Instruments, while the remaining 128 bytes are available for customer use. Programming is done through a IIC bus using the clock (SCL) and data (SDA) signals. All Texas Instruments modules comply with the current JEDEC SPD Standard. See the *Texas Instruments Serial Presence Detect Technical Reference* (literature number SMMU001) for further details. Tables in this section list the SPD contents as follows:

- NOTES: A. All linear dimensions are in inches (millimeters).
 B. This drawing is subject to change without notice.
 C. Falls within JEDEC MO-161
 D. Dimension includes de-panelization variations; applies between notch and tab edge.
 E. Outline may vary above notches to allow router/panelization irregularities.

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
