The eZ80F91 Mini Enet Module

The eZ80F91 Mini Enet Module is a compact, high-performance Ethernet module specially designed for the rapid development and deployment of embedded systems requiring control and Internet/Intranet connectivity.

This expandable module is powered by ZiLOG's latest power-efficient, high-speed, optimized pipeline architecture eZ80F91 microcontroller, a member of ZiLOG's family of eZ80Acclaim! Flash Microcontrollers.

The eZ80F91 is a high-speed single-cycle instruction-fetch microcontroller, which can operate with a clock speed of 50MHz. It can operate in Z80-compatible addressing mode (64KB) or full 24-bit addressing mode (16MB).

The rich peripheral set of the eZ80F91 Mini Enet Module makes it suitable for a variety of applications, including industrial control, IrDA connectivity, communication, security, automation, point-of-sale terminals, and embedded networking applications.

Module Features

- Factory-default 5MHz crystal oscillator input, 50MHz maximum operating speed via PLL
- 10/100 Base-T Ethernet PHY with RJ45 connector
- 128KB fast external SRAM
- 256KB on-chip Flash memory
- 8KB on-chip SRAM
- Real-Time Clock support
- I/O connector provides 32 general-purpose 5V-tolerant I/O pinouts
- Onboard connector provides I/O bus for external peripheral connections (IRQ, \overline{CS} , 24 address, 8 data)
- Connection to eZ80Acclaim![™] Development Platform via two 56-pin mini-headers
- Small footprint 50mm x 47.5mm
- 3.3V power supply
- Standard operating temperature range: 0°C to +70°C

eZ80F91 Controller Features

- The eZ80F91 device contains 256KB of Flash memory and 8KB of SRAM
- Single-cycle instruction fetch, high-performance, pipelined eZ80[®] CPU core
- 10/100 Mbps Ethernet MAC with 8KB frame buffer
- Low power features including SLEEP mode, HALT mode, and selective peripheral power-down control
- Two UARTs with independent baud rate generators and support for 9-bit operation
- SPI with independent clock generator
- I²C with independent clock generator
- Infrared Data Association (IrDA)-compliant infrared encoder/decoder
- DMA-like eZ80[®] instructions for efficient block data transfer
- External interface with 4 chip selects, individual wait state generators, and an external WAIT input pin — supports Intel- and Motorola-style buses
- Flexible-priority vectored interrupts (both internal and external) and interrupt controller
- Real-time clock with on-chip 32KHz oscillator, selectable 50/60Hz input, and separate V_{DD} pin for battery backup
- Four 16-bit Counter/Timers with prescalers and direct input/output drive
- Watch-Dog Timer
- 32 bits of general-purpose I/O
- JTAG and ZDI debug interfaces
- 144-pin BGA package
- 3.0–3.6V supply voltage with 5V tolerant inputs
- Standard operating temperature range: 0°C to +70°C

Block Diagram

Figure 1 provides a block diagram of the eZ80F91 Mini Enet Module.

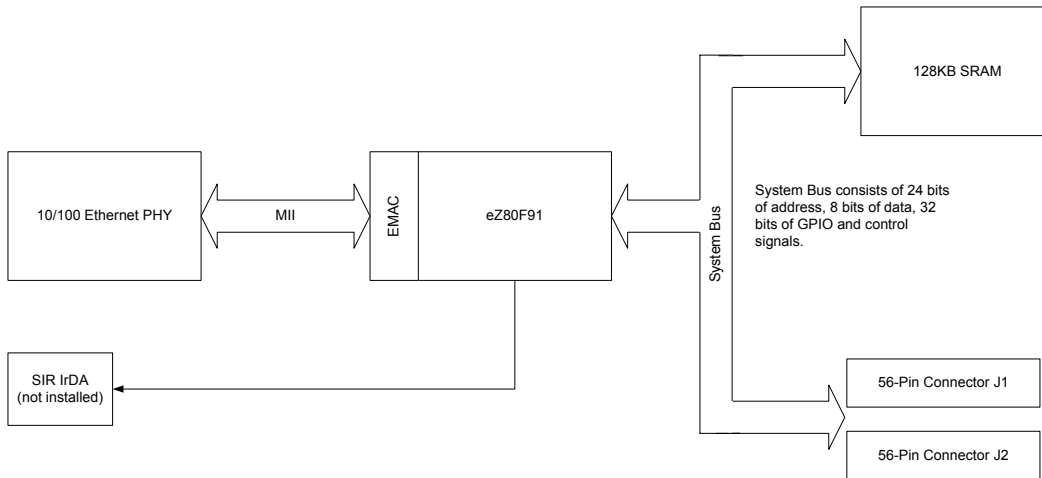

Figure 1. eZ80F91 Mini Enet Module Functional Block Diagram

Pin Description

Mini Module Connector J1 – Peripheral Bus

Figure 2 illustrates the pin layout of the 56-pin Peripheral Bus Connector (J1) of the eZ80F91 Mini Enet Module. The eZ80F91 Mini Enet Module is designed to connect to end-user applications via connectors J1 and J2, where the entire system bus and I/O port signals are available. The module is also compatible with ZiLOG’s eZ80F91 Modular Development System (eZ80F910100KIT). Table 1 identifies the pins and their functions.

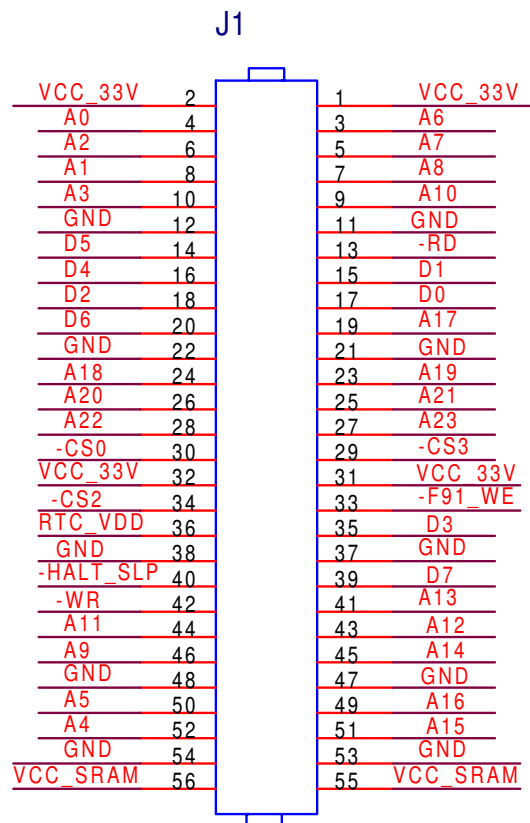

Figure 2. eZ80F91 Mini Enet Module Peripheral Bus Mini Connector Pin Configuration—J1

► **Note:** All signals with an overline are active Low. For example, $\overline{B/W}$, for which WORD is active Low, and $\overline{B/W}$, for which BYTE is active Low.

Table 1. eZ80Acclaim! Development Platform Peripheral Bus Connector J1 Identification^{1,2}

Pin #	Symbol	Signal Direction	Active Level	eZ80F91 Signal	Note
3	A6	Bidirectional	n/a	Yes	
4	A0	Bidirectional	n/a	Yes	
5	A7	Bidirectional	n/a	Yes	
6	A2	Bidirectional	n/a	Yes	
7	A8	Bidirectional	n/a	Yes	
8	A1	Bidirectional	n/a	Yes

23	A19	Bidirectional	n/a	Yes	
24	A18	Bidirectional	n/a	Yes	
25	A21	Bidirectional	n/a	Yes	
26	A20	Bidirectional	n/a	Yes	

Notes:

1. For the sake of simplicity in describing the interface, Power and Ground nets are omitted from this table. The entire interface is represented in the eZ80F91 Mini Enet Module schematics [on pages 31 through 32](#).
2. Additional note: external capacitive loads on \overline{RD} , \overline{WR} , \overline{IORQ} , \overline{MREQ} , D0–D7 and A0–A23 should be below 10pF to satisfy the timing requirements for the eZ80[®] CPU. All unused inputs should be pulled to either V_{DD} or GND, depending on their inactive levels to reduce power consumption and to reduce noise sensitivity. To prevent EMI, the EZ80CLK output can be deactivated via software in the eZ80F91's Peripheral Power-Down Register.

**Table 1. eZ80Acclaim! Development Platform
Peripheral Bus Connector J1 Identification^{1,2} (Continued)**

Pin #	Symbol	Signal Direction	Active Level	eZ80F91 Signal	Note

Notes:

1. For the sake of simplicity in describing the interface, Power and Ground nets are omitted from this table. The entire interface is represented in the eZ80F91 Mini Enet Module schematics [on pages 31 through 32](#).
2. The Power and Ground nets are connected directly to the eZ80F91 device.

Onboard Component Description

I/O Connector

The I/O connector features 32 general-purpose 3.3V CMOS I/O pins that can be used as outputs or inputs interfacing to external logic. All I/Os are 5V tolerant. Some of the General-Purpose I/O pins support dual mode functions (SPI, Timer I/O, UARTs and bit I/O with edge- or level-triggered interrupt functions on each pin). For more information on eZ80F91 dual modes, please refer to the *eZ80F91 Product Specification* (PS0192).

Peripheral Bus Connector

The peripheral bus connector features 24 pins that provide access to the eZ80F91 Mini Enet Module address bus and 8 pins that provide access to the module data bus. For more information on eZ80F91 address and data buses, refer to the *eZ80F91 Product Specification* (PS0192).

Ethernet PHY and RJ45 Connector

The eZ80F91 Mini Enet Module contains a Micrel KS8721BL 10/100 Ethernet PHY with Media Independent Interface (MII) and a HALO RJ45 with integrated magnetics and two LEDs (transformer and common-mode chokes).

The eZ80F91 Mini Enet Module defaults to 10Mbps, which works in either a 100 Mbps or a 10 Mbps network. Software can also configure the PHY for 100Mbps or autosense.

Ethernet LEDs

The Ethernet connection is provided by the HALO RJ45 connector. It contains two green LEDs that are located next to each other on the eZ80F91 Mini Enet Module. When PHY is receiving data, the left LED is on. When the PHY is transmitting data, the right LED is on.

5MHz Clock

The eZ80F91 Mini Enet Module contains a 5MHz crystal oscillator (Y2) that is multiplied by the phase-locked loop in the eZ80F91 MCU to create a 50MHz system clock.

Memory

The eZ80F91 MCU contains 256KB of internal Flash memory. Additional user memory can be accommodated via the system bus on connectors J1 and J2. To program the on-chip Flash memory, install jumper JP1 on the mini module. See Table 3.

Table 3. Shunt JP1, eZ80F91 Mini Enet Module

Symbol	Jumper Name	Shunt Status	Function	Affected Device
JP1	F91_WE	In (Default)	On-chip Flash is enabled for writing to boot block.	On-chip Flash
		Out	On-chip Flash memory boot block is write-protected.	On-chip Flash

There is 128KB of fast SRAM on the eZ80F91 Mini Enet Module. Access time is 12ns, which requires one wait-state access. The eZ80F91 on-chip SRAM can be used with zero wait states.

IrDA Transceiver

The eZ80F91 Mini Enet Module is shipped without an IrDA transceiver installed.

If you install an on-board transceiver, such as the ZiLOG ZHX1810, it is connected to PD0 (TX), PD1 (RX), and PD2 (Shutdown, IR_SD). The IrDA transceiver is of the LED type 870 nm Class 1.

The IrDA transceiver is accessible via the IrDA controller attached to UART0 on the eZ80F91 device.

To use the UART0 for console or to save power, the transceiver can be disabled by the software or by an off-board signal when using the proper jumper selection. The transceiver is disabled by setting PD2 (IR_SD) High or by pulling the

DIS_IRDA pin on the I/O connector Low. The shutdown is used for power savings. To enable the IrDA transceiver, DIS_IRDA is left floating and PD2 is set to Low.

Serial Interface Ports

The eZ80F91 MCU contains two UARTs with programmable baud rate generators. UART0 is connected to GPIO PD[0:7] on the I/O connector. UART1 is connected to GPIO PC[0:7] on the I/O connector.

- ▶ **Note:** Do not connect an RS-232 interface without level shifters. There are no RS232-level shifters on the eZ80F91 Mini Enet Module.

Physical Dimensions

The footprint of the eZ80F91 Mini Enet Module PCB is 2.00 inches by 1.90 inches. See Figure 4 for dimensions and top-layer silkscreen.

Figure 4. Physical Dimensions of the eZ80F91 Mini Enet Module

Absolute Maximum Ratings

Stresses greater than those listed in Table 4 can cause permanent damage to the device. These ratings are stress ratings only. Operation of the device at any condition outside those indicated in the operational sections of these specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability. For improved reliability, unused inputs should be tied to one of the supply voltages (V_{DD} or V_{SS}).

Table 4. Absolute Maximum Ratings

Parameter	Min	Max	Units
Standard operating temperature	0	+70	°C
Storage temperature	-45	+85	°C
Operating Humidity (RH @ 50°C)	25%	90%	
Operating Voltage	—	3.6	V
