

## Low EMI Spread Spectrum Multiplier Clock

### FEATURES

- Spread Spectrum Clock Generator with selectable multiplier from 1x to 6x outputs.
- Output frequency ranges: 10MHz to 180MHz.
- Accepts input from crystal or reference clock.
- Selectable Center, Down or Asymmetric Spread Modulation.
- Selectable Modulation rate.
- TTL/CMOS compatible outputs.
- 3.3V Operating Voltage.
- Low short term jitter.
- Available in 8-Pin 150mil SOIC.

### PIN CONFIGURATION

XIN/FIN = 10 ~ 30 MHz

**Note:** <sup>^</sup>: Internal pull-up resistor (120kΩ for SD, 30 kΩ for SC0-SC2).

\*: The value of SD is latched upon power-up. The internal pull-up resistor results in a default high value when no pull-down resistor is connected to this pin (recommended external pull-down resistor of 27 kΩ).

### DESCRIPTION

The ABE0101/02/04/06 are Spread Spectrum Clock Generators designed for the purpose of reducing EMI in high-speed digital systems. Any output frequency from 10 to 180MHz can be selected by programming 6 multiplier modes. The device is designed to operate from a crystal or reference clock input and provides 1x to 6x modulated clock outputs.

### PIN DESCRIPTIONS

Name	Number	Type	Description
XIN/FIN	1	I	Crystal input to be connected to fundamental parallel mode crystal. (C <sub>L</sub> =18pF) or clock input.
XOUT/SD	2	B	At power-up, this pin is an input pin to select modulation type. After input sampling, this pin is crystal output. Has internal pull up resistor.
SC0	3	I	Digital control input to select modulation magnitude. Has internal pull-up.
SC1	4	I	Digital control input to select modulation magnitude. Has internal pull-up.
GND	5	P	Ground.
FOUT	6	O	Modulated Clock Frequency Output. The frequency before modulation is synthesized by multiplying the input frequency by 1X, 2X, 4X, 6X depending on the part number (ABE0101, 02, 04, 06).
SC2	7	I	Digital control input to select modulation magnitude. Has internal pull-up.
VDD	8	P	Power Supply.

### FUNCTIONAL DESCRIPTION

#### Selectable spread spectrum and modulation magnitudes

The ABE0101/02/04/06 provides selectable spread spectrum modulation type, as well as selectable modulation magnitude. Selection is made by connecting specific pins to a logical “zero” or “one” according to the output clock selection table on page 1.

In order to reduce the number of pins on the chip, the ABE0101/02/04/06 uses pin 2 (XOUT/SD) as a bi-directional pin. The pin serves as modulation type selector input (SD) upon power-up (see output clock selection table on page 1), and as XOUT crystal connection as soon as the input has been latched.

Pins 3 (SC0), 4 (SC1), and 7 (SC2) are used as inputs to select the spread spectrum modulation magnitude as shown on the output clock selection table (page 1).

## Low EMI Spread Spectrum Multiplier Clock

### Connecting a selection pin to a logical “one”

All selection pins have an internal pull-up resistor (30kΩ for pins 3, 4, 7, and 120kΩ for pin 2). This internal pull-up resistor will pull the input value to a logical “one” (pull-up) by default, i.e. when no resistive load is connected between the pin and GND. No external pull-up resistor is therefore required for connecting a logical “one” upon power-up.

### Connecting a selection pin to a logical “zero”

For an input only pin, i.e. pins 3 (SC0), 4 (SC1), and 7 (SC2), the pin simply needs to be grounded to pull the input down to a logical “zero”. Connecting the bi-directional pin (SD) to a logical “zero” will however require the use of a 27kΩ loading resistor between the pin and GND.

## ELECTRICAL SPECIFICATIONS

### 1. Absolute Maximum Ratings

PARAMETERS	SYMBOL	MIN.	MAX.	UNITS
Supply Voltage	$V_{DD}$		4.6	V
Input Voltage, dc	$V_I$	-0.5	$V_{DD}+0.5$	V
Output Voltage, dc	$V_O$	-0.5	$V_{DD}+0.5$	V
Storage Temperature	$T_S$	-65	150	°C
Ambient Operating Temperature*	$T_A$	-40	85	°C
Junction Temperature	$T_J$		125	°C
Lead Temperature (soldering, 10s)			260	°C
ESD Protection, Human Body Model			2	kV

Exposure of the device under conditions beyond the limits specified by Maximum Ratings for extended periods may cause permanent damage to the device and affect product reliability. These conditions represent a stress rating only, and functional operations of the device at these or any other conditions above the operational limits noted in this specification is not implied.

\* **Note:** Operating Temperature is guaranteed by design for all parts (COMMERCIAL and INDUSTRIAL), but tested for COMMERCIAL grade only.
