

PRINCIPLE FUNCTION

Amplification of Single Ended Signals (Voltage)
Protection Functions for External Devices
Additional Adjustable Current/Voltage Source

TYPICAL APPLICATIONS

- Impedance Converter
- Adjustable Voltage Source
- Voltage Regulator with Additional Functions
- Protection IC for Microcontroller (Frame ASIC Concept [1])
- Protected Current Source

FEATURES

- Supply Voltage Range: 6...35V
- Wide Operating Temperature Range: $-40^{\circ}\text{C} \dots +85^{\circ}\text{C}$
- Voltage Reference: 5V
- Additional Voltage/Current Source
- Operational Amplifier Stage with Integrated Driver Output
- Adjustable Gain
- Adjustable Output Voltage Range e.g. 0...5/10V, others
- Reverse Polarity Protection
- Short Circuit Protection
- Output Current Limitation
- Low-Cost: Replaces a Multitude Number of Discrete Components

DESCRIPTION

The AM461 is a universal useable amplifier and protection IC with a multitude of additional functions. The IC contains of an externally adjustable operational amplifier for conditioning of single ended input signals. This amplifier has an integrated output driver stage with the ability to source up to 5mA without the need of any external transistor. In addition, a voltage reference for the supply of external components and another operational amplifier that can be used as current/voltage source or comparator is integrated.

Basic features of the IC are the wide range integrated of protection functions. The IC is protected against reverse polarity and has a build-in output current limitation. Using the amplifier IC AM461 it is possible to generate stable standard voltages ranges (e.g. 0-5/10V) in an easy and low-cost way.
