ROHM

Structure : Silicon Monolithic Integrated Circuit

Product : Band-pass filter for spectrum analyzer for car audio systems

Type :: **BA3835F**

Function : 1. Built-in band pass filter for spectrum analyzer. BA3835F is for 5 bands.
2. Designed for 5V microcomputer power voltage.

Absolute Maximum Ratings (Ta=25°C)

Parameter	Symbol	Rating	Unit
Power Supply voltage	Vcc	7	V
Power dissipation	Pd	450※	mW
Operating temperature	Topr	−25～+75	°C
Storage temperature	Tstg	−55～+125	°C

※This value decreases 4.5 mW/°C for Ta=25°C or more.

Operating Voltage Range (Ta=25°C)

Parameter	Symbol	Min.	Typ.	Max.	Unit
Power supply voltage	Vcc	4.5	5.0	6.5	V

Electrical Characteristics
(Unless specified particularly, Ta=25°C, V_{CC}=5V, R_L=10MΩ,V_{AIN}=−30dBV, SEL=1)

Parameter	Symbol	Limit			Unit	Conditions
		Min.	Typ.	Max.		
Circuit current	I_{CC}	−	8.5	13	mA	V_{AIN}=0V, A, B, C, SEL=0
Maximum output level	V_{OM}	4.0	4.8	−	V	V_{AIN}=−14dBV., Measured at each output
Output offset voltage	V_{OS}	−	30	150	mV	V_{AIN}=0V, SEL=0/1, Measured at each output (cycle time:Ts=50ms)
Standard output level 1	V_{O1}	0.65	1.35	1.70	V	f_{IN}=105Hz, A=0, B=0, C=1
Standard output level 2	V_{O2}	0.65	1.35	1.70	V	f_{IN}=340Hz, A=0, B=1, C=0
Standard output level 3	V_{O3}	0.65	1.35	1.70	V	f_{IN}=1kHz, A=1, B=0, C=0
Standard output level 4	V_{O4}	0.65	1.35	1.70	V	f_{IN}=3.4kHz, A=1, B=1, C=0
Standard output level 5	V_{O5}	0.65	1.35	1.70	V	f_{IN}=10.5kHz, A=1, B=1, C=1

Parameter	Symbol	Limit			Unit	Conditions
		Min.	Typ.	Max.		
Input impedance	R_{IN}	80	100	120	kΩ	$f_{IN}=1kHz$
Common-mode rejection ratio	CMRR	25	50	—	dB	$f_{IN}=1kHz$, $V_{AIN}=V_{CIN}$
Logic input high level	V_{IH}	2.5	5.0	—	V	—
Logic input low level	V_{IL}	—	0	0.5	V	Not applicable in the whan item 10 of operation notes applies.
Output response time*1	T_O	—	5	10	μ sec	—
Discharge level	DL	—	3	—	dB	Reset pulse width $T_R=10\mu secTyp.$*2

*1 The time from the rise of A, B, C or SEL until the rise of AOUT (90% of peak). If the output selection time is less than this, the output voltage is not guaranteed and the reset pulse is not generated.
*2 Automatically generated internally based on the output select signal. For the duration that this signal is "H", a resister is connected to the peak hold capacitor, and the output level drops by −3dB (typ.) for one pulse.
*3 The Q of the bandpass filter is 3.5
◎ Not designed for radiation resistance.
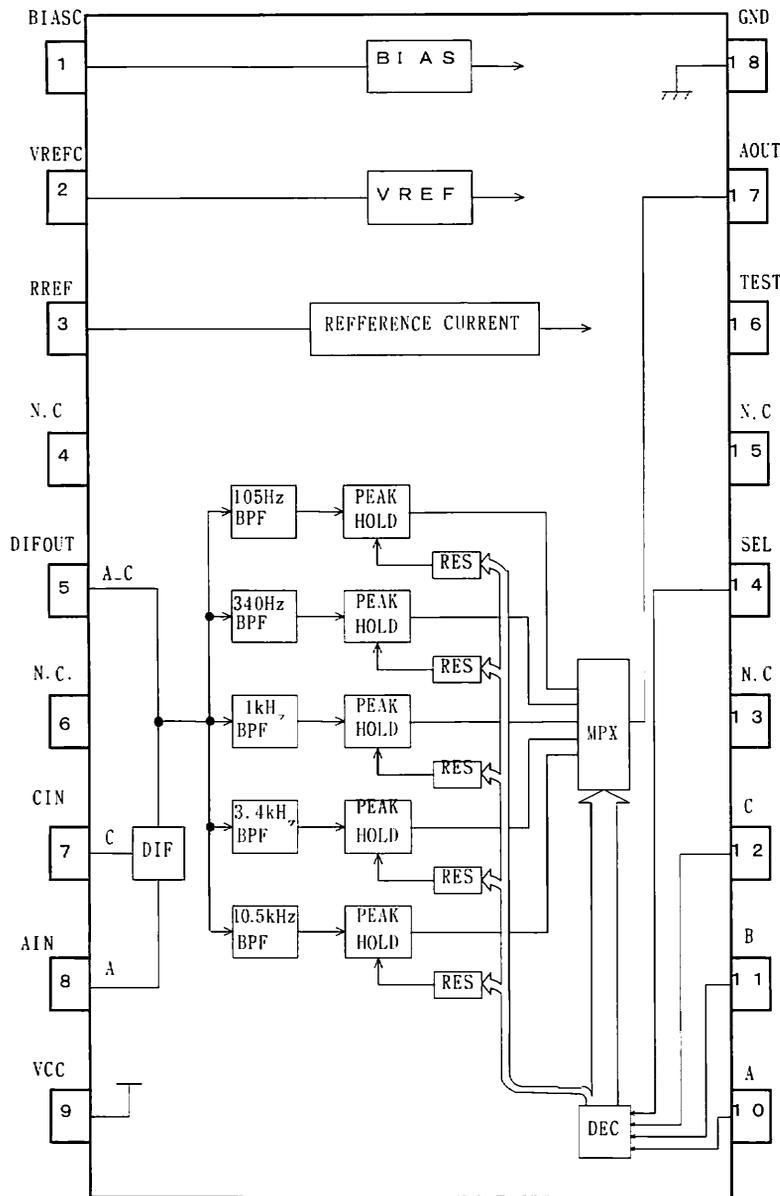

Output select logic table

SEL	A	B	C	AOUT
0	×	×	×	GND
1	0	0	0	GND
1	0	0	1	105Hz
1	0	1	0	340Hz
1	0	1	1	GND
1	1	0	0	1kHz
1	1	0	1	GND
1	1	1	0	3.4kHz
1	1	1	1	10.5kHz

×: Don't Care.

Application example

(1) Numbers and data in entries are representative design values and are not guaranteed values of the items.

(2) Although we are confident in recommending the sample application circuits, carefully check their characteristics further when using them. When modifying externally attached component constants before use, determine them so that they have sufficient margins by taking into account variations in externally attached components and the Rohm LSI, not only for static characteristics but also including transient characteristics.

(3) Absolute maximum ratings
If applied voltage, operating temperature range, or other absolute maximum ratings are exceeded, the LSI may be damaged. Do not apply voltages or temperatures that exceed the absolute maximum ratings. If you think of a case in which absolute maximum ratings are exceeded, enforce fuses or other physical safety measures and investigate how not to apply the conditions under which absolute maximum ratings are exceeded to the LSI.

(4) GND potential
Make the GND pin voltage such that it is the lowest voltage even when operating below it. Actually confirm that the voltage of each pin does not become a lower voltage than the GND pin, including transient phenomena.

(5) Thermal design
Perform thermal design in which there are adequate margins by taking into account the allowable power dissipation in actual states of use.

(6) Shorts between pins and misinstallation
When mounting the LSI on a board, pay adequate attention to orientation and placement discrepancies of the LSI. If it is misinstalled and the power is turned on, the LSI may be damaged. It also may be damaged if it is shorted by a foreign substance coming between pins of the LSI or between a pin and a power supply or a pin and a GND.

(7) Operation in strong magnetic fields
Adequately evaluate use in a strong magnetic field, since there is a possibility of malfunction.

(8) Frequency characteristics
The frequency characteristics of this IC are determined by the resistor connected between the R_{REF} terminal and GND. For the specification conditions, the value of this resistor is 100kΩ. If it is necessary to set the frequency characteristics accurately, use a variable resistor
(note: all bands will shift together).

(9) Load characteristics
To convert the bias sense output signal to the GND sense signal, the IC performs a V / I conversion, and then an I / V conversion using a 10kΩ resistor (Typ.) for the output. Therefore, if the load circuit connected to the AOUT pin has a MOS structure there is no problem (eg. Microprocessor input port), but if the connected circuit has a low input impedance, it may cause the output level to drop.

(10) External resistor for the control pin
When using a common port for the output select control and FL drive, you must add a diode and resistor as shown in the right figure to prevent the FL drive "L" voltage from destroying the IC.
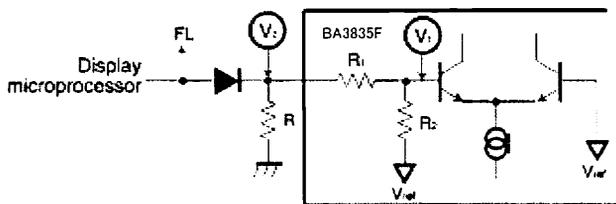

In this case, the "L" voltage applied to the internal comparator input terminal V_1 is given by:

$$V_1 = \frac{R_1 + R}{R_1 + R_2 + R} \times V_{ref}$$

To maintain a noise margin of at least 2.5V with respect to the comparator threshold level VREF, the representative values for VREF, R1 and R2 are 1.5V, 20kΩ, and 10kΩ respectively. This gives:

$$\frac{20k\Omega + R}{20k\Omega + 20k\Omega + R} \times 1.5V + 0.25V < 1.5V$$

And from this, the following condition is obtained:
R$<$30kΩ
In this case, the "L" level voltage V2 for the IC will be:
$V_2 < 0.75V$

(11) Recommended operating ranges
Provided that the IC is operated within the recommended operating conditions and the recommended temperature range, the basic circuit functions are guaranteed. Within these ranges, ratings for electrical characteristics for conditions other than those stipulated cannot be guaranteed, but the inherent function of the band pass filter will be maintained.
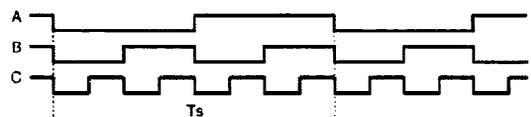

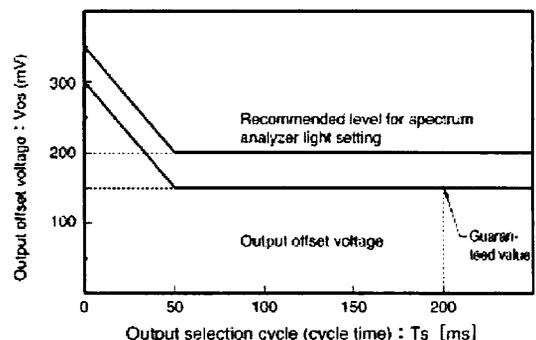

(12) Output offset voltage
The relationship between the output offset voltage and the output selection cycle (cycle time) for this IC is shown in Fig.5. The maximum output offset voltage of 150mV that is given in the electrical characteristics table is under the condition that Ts = 200ms.
When Ts is greater than 50ms, the graph of the output offset voltage is a straight line at 150mV. When Ts is below 50ms, due to transient
characteristics of the peak hold circuit, the graph is a line sloping downwards to the right. In other words, the shorter
the cycle, the larger the output offset voltage. Furthermore, the output offset voltage may shift due to soldering or other temperature stresses from the surroundings. Therefore, when setting the spectral analyzer light level, take into consideration the points given above
and make sure that it does not light by mistake during quiescent periods. Use the chart below as a guide for this, and, if necessary, leave even a larger margin.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of with would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
