

♦Structure

Silicon Monolithic Integrated Circuit

♦Product Name

10bit 4channels · D/A converter (with output buffer)

♦ Model Name

BU2508FV

♦Application

Adjustment/control of industrial or home-use electric equipment, such as DVD, CD-R, CD-R/W,

and DVC.

♦Features

#The BU2508FV is an integrated semiconductor of CMOS structure with 4 channels of built – in high quality 10 bit D/A converters with output buffer operational amplifiers of Rail to Rail output type

#Digital input corresponds to TTL level input.

#Data is inputted by 14 bit 3-wire serial data + reset signal.

[Address 4 bit + Data 10 bit]

#Adopting compact package of 0.65-mm pitch 14 pin.

\Diamond Absolute Maximum Rating: (Ta=25°C)

Parameter	Symbol	Ratings	Unit
Supply voltage	VCC	-0.3~6.0	V
Upper reference voltage of D/A converter	VDD	-0.3~6.0	V
Input voltage	VIN	-0.3~6.0	V
Output voltage	VOUT	-0.3~6.0	V
Storage temperature	Tstg	-55~125	°C
Power dissipation	Pd	350 #	mW

[#] Operating at higher than Ta=25°C, 3.5mW shall be reduced per 1°C.

\diamond Power supply operating voltage range : (Ta=25 $^{\circ}$ C)

Parameter	Symbol	Ratings	Unit
Supply voltage	VCC	4.5~5.5	V
Operating temperature	Topr	-30~85	\mathbb{C}

♦Directions

- · Described values and data are typical values on design, therefore the values are not guaranteed.
- The application circuit example is supposed to be recommended, however, verify properties sufficiently if this IC is used. When using it by changing external part constant, take enough margin in consideration of dispersion in external part and our LSI including DC and AC characteristic.
- · Absolute maximum rating

We are careful enough for quality control about this IC. So, there is no problem under normal operation, excluding that it exceeds the absolute maximum ratings. However, this IC might be destroyed when the absolute maximum rating such as impressed voltages (Vcc, VM) or the operating temperature range (Topr) is exceeded, and whether the destruction is short circuit mode or open circuit mode cannot be specified. Please take into consideration the physical countermeasures for safety, such as fusing, if a particular mode that exceeds the absolute maximum rating is assumed.

· GND line

The ground line is where he lowest potential and transient voltage are connected to the IC.

· Thermal design

Take enough margins taking power dissipation under actual usage into account.

· Short circuit mode between terminals and wrong mounting

Do not mount the IC in the wrong direction and be careful about the reverse connection of the power connector. Moreover, this IC might be destroyed when the dust short the terminals between them or GND.

Radiation

Strong electromagnetic radiation can cause operation failures.

· Added some ripple and noise to power supply terminals, this IC can't keep the accuracy of the D/A converter.

Therefore, it is recommended that external bypass capacitor should set as close as possible to the terminals between VDD and GND in order to stabilizes the D/A converter.

· The capacitor between output and GND recommend to set under 100pF including parasitic capacitor in order to reduces jitter and noise from layout of the output line.

^{*70}mm×70mm, thickness1.6mm, less than 3% share of copper foil when implementing glass epoxy board.

^{*}This product is not designed for protection against radioactive rays.

♦Electrical Characteristics (VCC=5V,VrefH=5V,VrefL=0V,Ta=25°C, unless otherwise noted)

Parameter		Symbol	Limits			Unit	Test conditions
		Symbol	MIN.	TYP.	MAX.	Oint	icst conditions

 means without prior permission of ROHM CO.,LTD.
- The contents described herein are subject to change without notice. The specifications for the
 product described in this document are for reference only. Upon actual use, therefore, please request
 that specifications to be separately delivered.
- Application circuit diagrams and circuit constants contained herein are shown as examples of standard
 use and operation. Please pay careful attention to the peripheral conditions when designing circuits
 and deciding upon circuit constants in the set.
- Any data, including, but not limited to application circuit diagrams information, described herein are intended only as illustrations of such devices and not as the specifications for such devices. ROHM CO.,LTD. disclaims any warranty that any use of such devices shall be free from infringement of any third party's intellectual property rights or other proprietary rights, and further, assumes no liability of whatsoever nature in the event of any such infringement, or arising from or connected with or related to the use of such devices.
- Upon the sale of any such devices, other than for buyer's right to use such devices itself, resell or
 otherwise dispose of the same, no express or implied right or license to practice or commercially
 exploit any intellectual property rights or other proprietary rights owned or controlled by
- ROHM CO., LTD. is granted to any such buyer.
- Products listed in this document are no antiradiation design.

The products listed in this document are designed to be used with ordinary electronic equipment or devices (such as audio visual equipment, office-automation equipment, communications devices, electrical appliances and electronic toys).

Should you intend to use these products with equipment or devices which require an extremely high level of reliability and the malfunction of with would directly endanger human life (such as medical instruments, transportation equipment, aerospace machinery, nuclear-reactor controllers, fuel controllers and other safety devices), please be sure to consult with our sales representative in advance.

About Export Control Order in Japan

Products described herein are the objects of controlled goods in Annex 1 (Item 16) of Export Trade Control Order in Japan.

In case of export from Japan, please confirm if it applies to "objective" criteria or an "informed" (by MITI clause) on the basis of "catch all controls for Non-Proliferation of Weapons of Mass Destruction.
