

## Six-Channel Discrete-to-Digital Interface Sensing 28 Volt / Open Signals

### DESCRIPTION

The HI-8421 is a six channel discrete-to-digital interface device. Mixed-signal CMOS technology is used to provide superior low-power performance. The HI-8421 has six separate 28 Volt / open sensing inputs. The device outputs are CMOS / TTL compatible and may be disabled (tri-state) using the  $\overline{CE}$  and  $\overline{OE}$  pins.

The device is a drop-in replacement for the DEI1054. For added functionality, the Holt HI-8422 offers eight channels of Open / Ground sensing and eight channels of 28V / Ground sensing in a single device.

The HI-8421 is offered in a small footprint 16-pin plastic package. Please contact the Holt sales department for other packaging options.

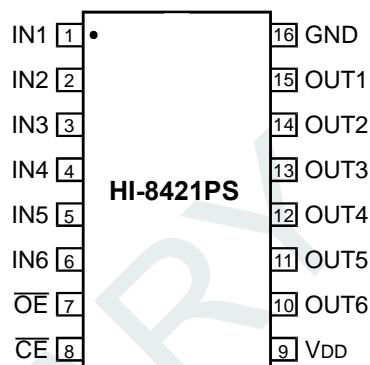

### FEATURES

- Six independent 28 Volt / Open sensing channels
- 5.0 V single supply operation
- Low power CMOS technology
